Mink Trapping: A Book of Instruction Giving Many Methods of Trapping A. R. Harding, 2021-04-25 This book explores several methods of trapping mink The methods published are from all parts of the country and many experienced trappers tell of their best methods so that it makes no difference in what part of America you live in something will be found on how to trap in your section Most of the articles are taken from those published in the H T T with slight corrections **Mink Trapping** A.R Harding, 2020-07-31 Reproduction of the original Mink Trapping by A R Harding Mink Trapping A. Harding, 2014-09-04 Mink are found in nearly all parts of America living along creeks rivers lakes and ponds While strictly speaking they are not a water animal yet their traveling for food and otherwise is mainly near the water so that the trapper finds this the best place to set his traps The mink is fond of fish rabbit squirrel birds mice etc In some sections they eat muskrat but we believe they prefer other animals only eating muskrat when very hungry and other game is scarce At certain seasons scent seems to attract them while at other times the flesh of the rabbit bird or fish will attract them The trapper who makes mink trapping a business should have various kinds of traps and sets for them such as steel traps both bait and blind sets as well as deadfalls Mink while small are quite strong for their size and very active While a No 0 Newhouse will hold them the No 1 is usually considered the proper trap As already mentioned mink travel a great deal near water so that the place to catch them is close to the water or in the water If you notice mink tracks near the water in some narrow place where the bank comes nearly to the water or a rock or log projects nearly to the water carefully dig a hole the size of your trap and an inch or more deep covering with a large leaf or a piece of paper first Then place a thin layer of earth removed over leaf or paper making the set look as natural as before The dirt from the hole for trap as taken out should be thrown in the water or to one side One of the great secrets in mink trapping especially blind sets is to leave things as near as possible as they were before the set was made There are various shades of mink some quite dark others brown pale and some cotton The greater number however are brown In the Northeast Maine etc mink are not large but the color is rather dark In the same latitude some ten or twelve hundred miles west in Minnesota and Manitoba Canada mink are larger but not so dark Still further west on the coast of Washington mink are again smaller being somewhat similar in size to the Maine mink but much lighter in color Throughout the central section such as Ohio Indiana Illinois Iowa etc they are larger than the Maine mink but smaller than Minnesota In color not near so dark as the Eastern or Maine mink Mink Trapping A. R. Harding, 2013-08 Mink are found in nearly all parts of America living along creeks rivers lakes and ponds While strictly speaking they are not a water animal yet their traveling for food and otherwise is mainly near the water so that the trapper finds this the best place to set his traps The mink is fond of fish rabbit squirrel birds mice etc In some sections they eat muskrat but we believe they prefer other animals only eating muskrat when very hungry and other game is scarce At certain seasons scent seems to attract them while at other times the flesh of the rabbit bird or fish will attract them The trapper who makes mink trapping a business

should have various kinds of traps and sets for them such as steel traps both bait and blind sets as well as deadfalls Mink while small are quite strong for their size and very active While a No 0 Newhouse will hold them the No 1 is usually considered the proper trap As already mentioned mink travel a great deal near water so that the place to catch them is close to the water or in the water If you notice mink tracks near the water in some narrow place where the bank comes nearly to the water or a rock or log projects nearly to the water carefully dig a hole the size of your trap and an inch or more deep covering with a large leaf or a piece of paper first Then place a thin layer of earth removed over leaf or paper making the set look as natural as before The dirt from the hole for trap as taken out should be thrown in the water or to one side One of the great secrets in mink trapping especially blind sets is to leave things as near as possible as they were before the set was made
