Minority Populations Genetics Demography And Health:

Minority Populations A.H. Bittles, 2014-01-14 The book focuses on the role of both biological and behavioural factors in the fertility and specific patterns of health and disease of minority populations living in developed and less developed countries The importance of marriages contracted between close relatives is stressed as over 900 million people inhabit countries where 20 to 50 per cent of marriages are inbred Past present and future trends in population mixing are evaluated with special consideration of their effects on the health of minorities Minority Populations Galton Institute (London, England). Symposium, Alan Holland Bittles, Derek Frank Roberts, 1992 This book focuses on the role of both biological and behavioural factors in the fertility and specific patterns of health and disease of minority populations living in developed and less developed countries The importance of marriages contracted between close relatives is stressed as over 900 million people inhabit countries where 20 to 50 per cent of marriages are inbred Past present and future trends in population mixing are evaluated with special consideration of their effects on the health of minorities The research data is based on the practical experience of the editors and contributors

Demography: Analysis and Synthesis, Four Volume Set Graziella Caselli, Jacques Vallin, Guillaume Wunsch, 2006-01-03 This four volume collection of over 140 original chapters covers virtually everything of interest to demographers sociologists and others Over 100 authors present population subjects in ways that provoke thinking and lead to the creation of new perspectives not just facts and equations to be memorized The articles follow a theory methods applications approach and so offer a kind of one stop shop that is well suited for students and professors who need non technical summaries such as political scientists public affairs specialists and others Unlike shorter handbooks Demography Analysis and Synthesis offers a long overdue thorough treatment of the field Choosing the analytical method that fits the data and the situation requires insights that the authors and editors of Demography Analysis and Synthesis have explored and developed This extended examination of demographic tools not only seeks to explain the analytical tools themselves but also the relationships between general population dynamics and their natural economic social political and cultural environments Limiting themselves to human populations only the authors and editors cover subjects that range from the core building blocks of population change fertility mortality and migration to the consequences of demographic changes in the biological and health fields population theories and doctrines observation systems and the teaching of demography The international perspectives brought to these subjects is vital for those who want an unbiased rounded overview of these complex multifaceted subjects Topics to be covered Population Dynamics and the Relationship Between Population Growth and Structure The Determinants of Fertility The Determinants of Mortality The Determinants of Migration Historical and Geographical Determinants of Population The Effects of Population on Health Economics Culture and the Environment Population Policies Data Collection Methods and Teaching about Population Studies All chapters share a common format Each chapter features several cross references to other chapters Tables charts and other non text features

are widespread Each chapter contains at least 30 bibliographic citations Health and Ethnicity Helen Macbeth,Prakash Shetty,2000-11-23 It is becoming increasingly apparent that certain diseases occur at higher frequencies in different ethnic groups e g Afro Carribeans and sickle cell anaemia The causes for such differences are only just being investigated and the factors involved are clearly both genetic and non genetic The biological complexity lies in the interaction of genetic variation and lifestyle differences Cultural differences range from diet to traditional remedies from religious beliefs to marriage patterns and much more This multidisciplinary volume discusses these factors with contributions from geneticists medics anthropologists epidemiologists and social scientists Anyone considering variation in health experience due to ethnic factors would be enriched by reading the different perspectives presented in this volume *Ethnicity and Integration* John Stillwell, Maarten van Ham,2010-07-20 The theme of this volume is ethnicity and the implications for integration of our increasingly ethnically diversified population New research findings from a range of census survey and administrative data sources are presented and case studies are included **Demographic Research, Volume 7** Mpi Für Demografische Forschung,2004 *Human Variability and Plasticity* C. G. N. Mascie-Taylor,Barry Bogin,1995-07-13 Plasticity refers to the ability of many organisms to change their biology or behaviour to respond to changes in the environment particularly when these are stressful Humans are perhaps the most plastic of all species and hence the most variable This book reflects on the history of research in this area state of the art research methods and discoveries and needs for future research in human plasticity and variability Topics discussed include child growth starvation disease of both young and old and the effects of migration modernisation and other life style changes The book will be especially useful to biological anthropologists human biologists and medical scientists interested in knowing more about how and why humans vary *Genomic Architecture of Schizophrenia Across Diverse Genetic Isolates* Kazima Bulayeva,Oleg Bulayev,Stephen Glatt,2016-11-17 This book presents a long term study in genetic isolates of indigenous small ethnics of Dagestan located in the North East part of Caucasus in Russia Dagestan is characterized by extreme cultural and linguistic differences in a small geographic area and contains 26 indigenous ethnic groups According to archeological data these indigenous highland ethnics have been living in the same area for more than ten thousand years Our long term population genetic study of Dagestan indigenous ethnic groups indicates their close relation to each other and suggests that they evolved from one common ancestral meta population Dagestan has an extremely high genetic diversity between ethnic populations and a low genetic diversity within them Such genetic isolates are exceptional resources for the detection of susceptibility genes for complex diseases because of the reduction in genetic and clinical heterogeneity The founder effect and gene drift in these primary isolates may have caused aggregation of specific haplotypes with limited numbers of pathogenic alleles and loci in some isolates relative to others The book presents a study in four ethnically and demographically diverse genetic isolates with aggregation of schizophrenia that we ascertained within our Dagestan Genetic Heritage Research Project The results obtained support the notion that mapping

genes of any complex disease e g schizophrenia in demographically older genetic isolates may be more time and cost effective due to their high clinical and genetic homogeneity in comparison with demographically younger isolates especially with genetically heterogeneous outbred populations *Conferencia Mundial de Las Encuestas de Demografia Y Salud* ,1991

Genetic Nature/Culture Alan H. Goodman, Deborah Heath, M. Susan Lindee, 2003-11-06 Individual essays address issues raised by the science politics and history of race evolution and identity genetically modified organisms and genetic diseases gene work and ethics and the boundary between humans and animals The result is an entree to the complicated nexus of questions prompted by the power and importance of genetics and genetic thinking and the dynamic connections linking culture biology nature and technoscience The volume offers critical perspectives on science and culture with contributions that span disciplinary divisions and arguments grounded in both biological perspectives and cultural analysis

Designing Our Descendants Audrey R. Chapman, Mark S. Frankel, 2004-12-01 The Human Genome Project discoveries in molecular biology and new reproductive technologies have advanced our understanding of how genetic science may be used to treat persons with genetic disorders Greater knowledge may also make possible genetic interventions to enhance normal human characteristics such as height hair or eye color strength or memory as well as the transmittal of such modifications to future generations The prospect of inheritable genetic modifications or IGMs whether for therapeutic or enhancement purposes raises complex scientific ethical and regulatory issues Designing Our Descendants presents twenty essays by physicians scientists philosophers theologians lawyers and policy analysts addressing these issues from diverse perspectives In three sections the authors discuss the short and long term scientific feasibility of IGM technology ethical and religious issues related to safety justice morality reproductive rights and enhancement and regulatory issues including the necessity of public input and oversight and the influence of commercialization Their goal is to open a dialogue engaging not only scholars and scientists but also government officials and concerned citizens The authors conclude that while IGM cannot be carried out safely and responsibly on humans utilizing current methods it is important to begin public discussion now to determine whether and if so how to proceed

Consanguinity in Context Alan H. Bittles, 2012-05-24 An essential guide to this major contemporary issue Consanguinity in Context is a uniquely comprehensive account of intra familial marriage Detailed information on past and present religious social and legal practices and prohibitions is presented as a backdrop to the preferences and beliefs of the 1100 million people in consanguineous unions Chapters on population genetics and the role of consanguinity in reproductive behaviour and genetic variation set the scene for critical analyses of the influence of consanguinity on health in the early years of life The discussion on consanguinity and disorders of adulthood is the first review of its kind and is particularly relevant given the ageing of the global population Incest is treated as a separate issue with historical and present day examples examined The final three chapters deal in detail with practical issues including genetic testing education and counselling national and international legislation and imperatives and the future of

consanguineous marriage worldwide **Human Adaptation** Howard Morphy, G. A. Harrison, 2020-12-22 This book examines the concept of adaptation in four major fields in the human sciences Genetic aspects are first considered through an examination of the human genes which have so far been identified as conferring survival value in particular environmental circumstances The drift versus selection argument is also fully reviewed The second contribution concerns the physiological changes which occur when individuals move from one environment to another In the past most attention has been given to the mechanisms of these changes but here the focus is on the effects The third contribution is directed at the analysis of behaviour especially social behaviour The application of kin selection and reciprocal attraction theories to humans is explored and the value of these approaches explained whether the behaviour has a genetic basis or not The final essay deals with the relevance of the adaptation concept to the social sciences and especially to social anthropology It demonstrates that an ecological approach to understanding the nature and structure of human societies demands attention to adaptation Reprinted in paperback for the first time and with a new foreword this book which serves as an excellent teaching text clearly shows how attempts at integration in each of these various fields can benefit the study of human evolution social structure and organization from all perspectives The Indian Human Heritage D. Balasubramanian, N. Appaji Rao, 1998 This Is A Collection Of Articles By Experts From Different Fields While The Focus Of Each Article Is Different From The Others The Common Thread Of The Heritage Of India Strings Them Together To Form A Well Represented Foray Into Various Aspects Of The Indian Human Heritage Written By Experts In Their Respective Fields These Articles Analyse The Health Cultural Linguistic And Sociological Heritage Of India Also Included Are Articles Which Look At The Dating Of Archaeological Material And Assess The Effects Of Climate And Geological Changes On The Indian Subcontinent As Well As On Ancient Civilisations *The Social Construction of Social Policy* Colin Samson, Nigel South, 1996-06-12 This volume draws together an impressive series of papers that explore enduring and new problems in the construction and analysis of British social policy Critical but accessible the various chapters cover methodological issues and the nature of competing claims about social policy knowledge racism and health services citizenship and access to housing and other amenities and the importance of the environment as an emerging area for social policy debate The Making and Unmaking of Whiteness Birgit Brander Rasmussen, Eric Klinenberg, Irene J. Nexica, Matt Wray, 2001-09-07 Bringing together new articles and essays from the controversial Berkeley conference of the same name The Making and Unmaking of Whiteness presents a fascinating range of inquiry into the nature of whiteness Representing academics independent scholars community organizers and antiracist activists the contributors are all leaders in the second wave of whiteness studies who collectively aim to combat the historical legacies of white supremacy and to inform those who seek to understand the changing nature of white identity both in the United States and abroad With essays devoted to theories of racial domination comparative global racisms and transnational white identity the geographical reach of the volume is significant and broad Dalton Conley writes on How I

Learned to Be White Allan B rub discusses the intersection of gay identity and whiteness and Mab Segrest describes the spiritual price white people pay for living in a system of white supremacy Other pieces examine the utility of whiteness as a critical term for social analysis and contextualize different attempts at antiracist activism In a razor sharp introduction the editors not only raise provocative questions about the intellectual social and political goals of those interested in the study of whiteness but assess several of the topic s major recurrent themes the visibility of whiteness or the lack thereof the emptiness of whiteness as a category of identification and conceptions of whiteness as a structural privilege a harbinger of violence or an institutionalization of European imperialism Contributors William Aal Allan B rub Birgit Brander Rasmussen Dalton Conley Troy Duster Ruth Frankenberg John Hartigan Jr Eric Klinenberg Eric Lott Irene J Nexica Michael Omi Jasbir Kaur Puar Mab Segrest Vron Ware Howard Winant Matt Wray The Blackwell Companion to Sociology Judith R Blau,2008-04-15 The Blackwell Companion to Sociology is a milestone collection of new essays by renowned sociologists covering both the traditions and strengths of the field as well as newer developments and directions Authors from the US the UK Europe and elsewhere have contributed to this all in one reference work highlighting the relevance of interdisciplinary and international perspectives while at the same time representing the scope and quality of sociology in its current form

The Governance of Knowledge Nico Stehr,2011-12-31 Social surveillance and regulation of knowledge will be one of the most important issues in the near future one that will give rise to unending controversy In *The Governance of Knowledge* Nico Stehr predicts that such concerns will create a new political field namely knowledge policy which will entail regulating dissemination of the anticipated results of rapidly increasing knowledge The number and range of institutionalized standards for monitoring new knowledge has hitherto been relatively small Only in cases of technological applications has social control in the form of political regulation so far intervened All modern societies today have complex regulations and extensive concerns with the registration licensing testing and monitoring of pharmaceutical products The increasingly important and extensive area of intellectual property legislation and administration is an example of social control in which certain measures selectively determine the use of scientific finds and technical knowledge *The Governance of Knowledge* assembles a range of essays that attempt to explore the new field of knowledge politics for the first time It is divided into four parts The Emergence of Knowledge Politics Origins Context and Consequences Major Social Institutions and Knowledge Politics Case Studies on the Governance of Knowledge and Issues in Knowledge Politics as a New Political Field Individual chapters concern the emergence of knowledge policy the embeddedness of such regulations in major social institutions offer case studies and discuss controversial issues that are bound to accompany efforts to regulate new knowledge Professionals and graduate students in the fields of sociology political science social science and law including policymakers and natural scientists will find this book extremely informative Nico Stehr is Paul Lazarsfeld Professor at the Universit t Wien Austria His research interests center on the transformation of modern societies into knowledge societies the interrelation between

climate and society the history of the social sciences and the uses of social and natural science knowledge Among his recent books are Werner Sombart *Economic Life in the Modern Age* with Reiner Grundmann published by Transaction and *Knowledge and Economics Conduct* **Naked Science** Laura Nader, 2014-01-02 *Naked Science* is about contested domains and includes different science cultures physics molecular biology primatology immunology ecology medical environmental mathematical and navigational domains While the volume rests on the assumption that science is not autonomous the book is distinguished by its global perspective Examining knowledge systems within a planetary frame forces thinking about boundaries that silence or affect knowledge building Consideration of ethnoscience and technoscience research within a common framework is overdue for raising questions about deeply held beliefs and assumptions we all carry about scientific knowledge We need a perspective on how to regard different science traditions because public controversies should not be about a glorified science or a despicable science **Chinatown in Britain** Wai-ki Luk, 2008 The focus of this book is on Chinese immigration in the past two decades and its spatial manifestations in Britain A major argument in this study is that if the 1980s can be recorded as a turning point in the history of Chinese immigration to Britain because the decade marked a substantial increase in and a diversity of Chinese immigrants it should also be considered a landmark in contemporary British urban history as it featured a major transformation in the Chinese urban landscape This book examines how changes in the contexts of exit and reception have stimulated quantitative and qualitative changes in Chinese immigration and how these changes in immigration facilitate the development of Chinatowns and Chinese settlements
