Mirror Deception:

The Deformation Susanna Berger, 2025-07-29 A fascinating account of the use and meaning of visual and spatial distortions in seventeenth century art and architecture During the Catholic Reformation patrons artists architects and viewers especially in Rome were strongly drawn to visual and spatial distortions or deformations works of art and architecture that were designed to be visually incomprehensible at least initially From Borromini's San Carlo alle Quattro Fontane in Rome to the attention grabbing prospettiva in the city's Palazzo Spada and the anamorphoses that define the corridors and walls of Minim and Jesuit buildings *The Deformation* explores what this intriguing phenomenon reveals about contemporary religious belief optics and the natural sciences as well as wider questions about attention and discernment Failing to conform to an established ideal deformations required a reformation to achieve that ideal Anamorphic deformations for example could only be reformed into clarity when viewed from a particular angle or through a special mirror Susanna Berger examines how deformations were experienced by beholders and how they were embraced or opposed by critics The book shows how deformations and related works whether altar tabernacles ephemeral religious architecture churches monumental sundials colonnades with accelerated perspective illusionistic frescoes turned ivories or painted anamorphoses focused observers attention on theological mysteries and the social power and sophistication of patrons The book's rich illustrations include two gatefolds and some anamorphic images that can be seen without distortion by using an included reflective insert as a mirror Looking at writings as well as visual works in multiple artistic media not typically considered in relation to each other *The Deformation* offers a new interpretation of deformation that highlights the delay between perception and discernment Susanna Berger is associate professor of art history and philosophy at the University of Southern California She is the author of *The Art of Philosophy Visual Thinking in Europe from the Late Renaissance to the Early Enlightenment* Princeton

Mirror Facts Amelia Khatri, AI, 2025-02-18 *Mirror Facts* explores the surprising intersection of science history and culture found in the everyday object of the mirror It examines not only the physics of how mirrors reflect light based on

principles of optics and material science but also how mirror technology has evolved from early polished stones found in archaeological findings to the high tech reflective surfaces we use today Did you know that the development of silvering techniques was a pivotal moment in creating clearer more effective mirrors The book traces a logical progression starting with the fundamental laws of reflection and then moving through a chronological history of mirrors across civilizations It shows how these reflective surfaces have been imbued with cultural symbolism appearing in art literature and even mythology Exploring this cultural symbolism highlights the fascinating ways different societies view mirrors from tools for self reflection to portals in folklore Mirror Facts takes a unique approach by blending scientific accuracy with historical context and cultural insights By connecting optics material science and art history the book offers a comprehensive view that will appeal to anyone curious about the hidden stories behind common objects
