Centauri Dreams Paul Gilster, 2013-04-18 I wrote this book because I wanted to learn more about interstellar flight Not the Star Trek notion of tearing around the Galaxy in a huge spaceship that was obviously beyond existing technology but a more realistic mission In 1989 I had videotaped Voyager 2's encounter with Neptune and watched the drama of robotic exploration over and over again I started to wonder whether we could do something similar with Alpha Centauri the nearest star to the Sun Everyone seemed to agree that manned flight to the stars was out of the question if not permanently then for the indefinitely foreseeable future But surely we could do something with robotics And if we could figure out a theoretical way to do it how far were we from the actual technology that would make it happen In other words what was the state of our interstellar technology today those concepts and systems that might translate into a Voyager to the stars Finding answers meant talking to people inside and outside of NASA I was surprised to learn that there is a large literature of interstellar flight Nobody knows for sure how to propel a spacecraft fast enough to make the interstellar crossing within a time scale that would fit the conventional idea of a mission but there are candidate systems that are under active investigation Some of this effort begins with small systems that we'll use near the Earth and later hope to extend to deep space missions The

Nygren,2015-02-28 Hypothetical Spacecraft and Interstellar Travel collects information about the latest and greatest hypothetical spacecraft *The Right of Nonuse* Jan G. Laitos,2013-05-30 The Right of Nonuse provides a fresh and remarkably different perspective on the real causes of the ills plaguing the world's resources and environment It re-examines the very nature of nature and from this new perspective argues that what is needed is for humans to grant to natural resources a legal right to be left alone a right of nonuse In the process it explores the following questions Why do natural resources continue to be depleted and removed at an alarming rate Why are species becoming extinct at a pace that may be unprecedented Why does the environment continue to be polluted Why do the weather and climate seem to be changing Perhaps most important why have laws legal institutions and governments been unable to address and correct these problems Jan Laitos reviews the history of our relationship with the natural environment and develops new ways of thinking about nature and its protection Instead of proceeding with human based goals Laitos argues that we should protect environmental resources for their own intrinsic value Instead of giving humans more and more rights to clean up the environment and to halt resources depletion a right of nonuse held by the resource itself should be created Natural resources have always possessed this parallel nonuse function and society should recognize and legitimize it Our Cosmic Future

Bitetto,2011-09-09 At present the rate of research and development in the field of design and development of systems that produce and store antimatter it is extremely possible that in less than one hundred years it will be possible to traverse interstellar space via matter antimatter based propulsion systems Moreover such matter antimatter based propulsion systems have been theorized to enable spacecraft to travel at speeds as high as half the speed of light Consequently such matter antimatter based propulsion systems will force their design engineers and scientists to deal with the strange world of relativistic effects that the spacecraft will have to contend with Hence in the pages that follow I shall attempt to enlighten the reader to the nature of such strange effects that make conventional space based navigation impossible I shall also attempt to discuss a possible solution to the problem of near light speed interstellar space travel
