A. Richter-Menge, Cold Regions Research and Engineering Laboratory (U.S.), 1986 This report presents the first series of conventional triaxial tests carried out on columnar first year sea ice samples obtained from the field and tested under controlled laboratory conditions using a large capacity test machine A total of 110 horizontal ice samples from Prudhoe Bay Alaska were tested on a closed loop electro hydraulic test machine at 10 C in unconfined and confined constant strain rate compression The confined tests were conducted in a conventional triaxial cell that maintained a constant ratio between the radial and axial stress to simulate in situ loading conditions The load ratios used were 0.25 0.50 and 0.75 The strain rate of each test was constant at 0.01 0.001 or 0.00001 s Data are presented on the strength failure strain and initial tangent modulus of the first year sea ice under these loading conditions The effects of confining pressure strain rate and ice structure on the mechanical properties of the ice are examined **CRREL Report** , 1986 Collected Reprints , 1973 Petroleum and Marine Technology Information Guide J.
