Ford,2020-07-09 The story of the P 51B Mustang aircraft from its development prior to the American entry into the war through to D Day in June 1944 During World War II the United States Army Air Corps was led by a cadre of officers who believed implicitly that military aviation particularly fast heavy bombers at high altitude would be able to destroy strategic enemy targets during daylight with minimal losses However by 1942 the Flying Fortress was proving vulnerable to Luftwaffe fighters This title charts the United States Army Air Force s struggle to develop a Long Range Escort which would enable them to achieve the Combined Bomber Objectives and gain mastery of the skies over the Third Reich The commitment of the USAAF to the Mediterranean and European theatres saw an increasingly desperate need to find a fighter escort which reached crisis point in 1943 as losses suffered in the Tidal Wave offensive and Schweinfurt Regensburg Munster raids emphasised the mounting strength of the Luftwaffe The USAAF leaders increasingly accepted the probability of bomber losses and the deployment of the P 51B Mustang solved the problem of Germany s layered defence strategy as Luftwaffe fighters had been avoiding the P 47 Thunderbolt and P 38 Lightning escort fighters by concentrating their attacks beyond the range of the Thunderbolt and Lightning The P 51B duly emerged as the The Bastard Stepchild that the USAAF Material Division did not want becoming the key Long Range Escort fighter alongside the P 38 and P 47 that defeated the Luftwaffe prior to D Day As well as the P 51B s history this title explores the technical improvements made to each of these fighters as well as the operational leadership and technical development of the Luftwaffe they fought against **Wings of War** David Fairbank White,Margaret Stanback White,2022-12-06 The incredible untold story behind the rise of the P 51 Mustang the World War II fighter plane that destroyed the Luftwaffe and made D Day possible Aviation buffs will cheer this high flying saga Publishers Weekly A fascinating book about passion and innovation Walter Isaacson An essential book for those who

appreciate tales of military bravery and also for all seeking understanding of decision making under pressure A major contribution E J Dionne Jr When the P 51 Mustang began tearing across European skies in early 1944 the Allies had been losing the air war for years Staggering numbers of bomber crews both British and American had been shot down and killed thanks to the Luftwaffe s superior fighter force Not only did the air war appear grim but any landing of troops in France was impossible while German fighters hunted overhead But behind the scenes a team of visionaries had begun to design a bold new type of airplane one that could outrun and outmaneuver Germany s best Wings of War is the incredible true story of the P 51 Mustang fighter and the unlikely crew of designers engineers test pilots and army officers who brought it from the drafting table to the skies over World War II This is hardly a straightforward tale of building an airplane for years the team was stymied by corruption within the defense industry and stonewalled by the Army Air Forces who failed to understand the Mustang s potential But when squadrons of Mustangs were finally unleashed over Hitler s empire the Luftwaffe was decimated within months clearing the skies for D Day A compelling character focused narrative replete with innovation determination and bravery Wings of War is the never before told story of the airplane that truly changed the course of World War II

*Scientists Against Time* H. A. brilliant advances he made which helped the Allies win the war against Hitler's Third Reich. By the mid 1930s the obstacles to high speed that aircraft designers faced included the question of cooling the engine. This was a big challenge that those working on the new fast aeroplanes entering service as the war clouds gathered over Europe had to consider as the drag from the system increased as a square of the speed. Ducted systems were designed which lowered drag but these were based on the assumption that the system was cold. This ignored the potential energy from the air heated by the radiator for liquid cooled aircraft and from the discharged engine exhaust gases. It took a profoundly lateral thinker to harness the possibilities of the paradox that heat could cut the cost of cooling. That thinker was the British engineer Frederick William Meredith. A researcher at the Royal Aircraft Establishment at Farnborough until 1938, F. W. Meredith was a key player in the UK's development of the autopilot and remote controlled aircraft. His contribution to Allied success in the Second World War was enormous but incredibly he was also a known Soviet agent. Few would doubt that the Supermarine Spitfire was a pioneering aeroplane not because it was an all metal monoplane with retractable undercarriage and enclosed cockpit as these were not unique but because it was the first to incorporate a Meredith designed ducted cooling system. This was intended from the beginning to use heat to create negative drag. In practice the Spitfire's design was flawed as Meredith himself pointed out and did not fully use what became known as the Meredith Effect. Meredith also made entirely overlooked but extremely important contributions to resolving the problem of how to induce air smoothly into cooling ducts at high speeds without which as the Spitfire demonstrated ducted cooling systems worked sub optimally. The first aeroplane properly to exploit the Meredith Effect was the North American P 51 Mustang, this being a very significant factor as to why it was 30mph faster than the Spitfire when both had the same Rolls Royce Merlin engine. This book by Peters Spring examines the life of the remarkable and controversial F. W. Meredith, an individual who has largely been forgotten by history despite the brilliant advances he made, advances which helped the Allies win the war against Hitler's Third Reich. *Military History* DK, 2012-09-17.
