White,2003-02-28 Each year a billion dollars is spent on church buildings in the United States Yet there is no authoritative book available to guide building committees ministers and others responsible for new churches in the theological implications of their work Dr White explores the theological and historical considerations relevant to building for Protestant worship Surprisingly these are often ignored by building committees usually with disastrous results His approach is highly original especially in his theological treatment of worship yet his book is also a operative in the largest sense in that it relates theology to practice Professor White begins with a critical analysis of contemporary concepts of Protestant worship and then defines the liturgical factors in church design Following this there are four chapters giving an historical account of various experiments from the third century to the present This section indicates the tremendous variety of possibilities open to the church builder many of which have been ignored too long A final chapter deals with emotive factors all vitally relevant to the architect choir liturgical art and style The opportunity to design a new church building occurs only once or twice in each generation of church members It is all the more important that it be done carefully since the building will continue to affect the life of the congregation for many years Until fundamental questions as to what the Church is and what the Church does in worship are raised a congregation is not

prepared to build This book will help churches find the answers The 155 item bibliography should be of value to many since a recent extensive bibliography on Protestant church architecture does not exist This book also contains 60 diagrams of experiments in plan garnered from nearly 2000 years of history     Who's who in New England ,1909     *The Puritans* Perry Miller,Thomas H.
