Roots Of Environmental Consciousness:

Environmental Consciousness Stephen Hussey, Paul Richard Thompson, 2004 Across the globe environmental questions feature more and more in today's social and political agendas. In Western countries environmental campaigns target issues at home and abroad. They have a special urgency which draws in an astonishing range of field campaigners from young militants to rebel aristocrats. This book examines the roots of contemporary environmental consciousness and action in terms of both popular experience and tradition. The global reach of this book reflects the character of contemporary environmentalism. It examines a geographically and thematically diverse range of case studies including British environmental campaigners in the Brazilian rainforest, ecocriticism and literature, the environmental movement in Kazakhstan and medieval church iconography. The common theme linking each chapter is that environmental consciousness and activism are shaped through people's life stories and that their memories are shaped not only through individual experience but also through myth, tradition and collective memory. Containing a wealth of empirical source material, *Environmental Consciousness* will be invaluable for sociologists and historians alike. It offers a cutting edge illustration of how narrative and oral history can illuminate our understanding of an uncertain present. Stephen Hussey is a research associate at the School of Education at the University of Cambridge. His previous publications include *Childhood in Question* and his next publication will be a book for the wider market entitled *Headline History*. Paul Thompson is research professor in sociology and director of Qualidata at the University of Essex. He is also founder of the National Life Story Collection at the British Library National Sound Archive and founder editor of *Oral History*. His previous publications include *The Voice of the Past: The Edwardians* and *The Work of William Morris*. **The Roots of Environmental Consciousness** Stephen Hussey, Paul

Thompson, 2002-09-11 This book examines the roots of contemporary environmental consciousness and action in terms of both popular experience and tradition. A wide range of geographical and thematic case studies explore the myth, tradition and collective memory that shape our environmental thought. Containing a wealth of empirical source material, this book will be invaluable for sociologists and historians alike. *Environmental Consciousness* Taylor & Francis Group, 2018-09-30 *A History of Environmental Politics Since 1945* Samuel P. Hays, 2000-10-15 Long before public life in America was enlivened with such dramatic sound bites as acid rain, global warming, rain forests and the ozone layer, Samuel P. Hays was well launched on his career of tracking this new phenomenon of environmental affairs. His first foray, a book on the early twentieth century conservation movement published in 1958, helped to launch environmental history as a field and his continued writings after coming to the University of Pittsburgh in 1960 helped to bring the field to full flower. Now he has produced another volley which promises to continue to energize this growing and dynamic field of study. *A History of Environmental Politics since 1945*. Hays provides an overview of environmental politics during the last half century, both its formative and its maturing years, that will be useful to those who are actively engaged in environmental affairs and those who wish to watch

and assess it from the sidelines His themes are both simple and diverse His overall focus is on the emergence of an environmental culture which has engaged millions of Americans in varied ways of thought and action on the one hand and the intense opposition to that drive on the other Hays explores a wide range of issues such as the role of nature in an urban society pollution and its causes and effects the impact of an ever increasing population and its voracious appetite to consume At the same time he follows these threads through science technology economics management the structure of politics and the results of policy A History of Environmental Politics since 1945 provides an introduction to the subject for both the specialist and the lay audience the general public and the student It provides a high level of insight that will inform both those who are environmental experts and those who wish to take a first step at grasping the meaning of environmental affairs It constitutes a formative guide for a subject that promises to engage the nation ever more fully in the years to come

Profits and Sustainability Geoffrey Jones, 2018-01-26 Are profits and sustainability compatible This book brings unique perspectives to this key debate by exploring the history of green entrepreneurship since the nineteenth century and its spread globally in industries including renewable energy organic food natural beauty ecotourism recycling architecture and finance The book uses the lens of the extraordinary and often eccentric men and women who defied convention and imagined that business could help save the planet rather than consume it The social and religious beliefs that drove many of these individuals are explored as the book looks at how they overcame huge obstacles to execute their strategies The green entrepreneurs seen here are shown to have created new markets and industries and driven innovations in sustainable practices even at times when most consumers and governments marginalized the entire subject The struggles of early pioneers appear to have been rewarded by the growth of environmental awareness among consumers business leaders and others in recent years but the Earth's environmental health continues to deteriorate If profits and sustainability have proved challenging to reconcile the book argues that one reason was how they were both defined

The Origins of Energy and Environmental Policy in Europe Thomas C. Hoerber, 2013 This book examines the development of a European environmental conscience through successive steps of European integration in energy policy In the 1960s 70s the world was slowly beginning to realise that environment degradation was not sustainable With phenomena such as acid rain it became clear that pollution did not stop at national boundaries and the European environmental conscience developed in parallel to such growing environmental concerns The oil crisis in 1973 was a turning point in the integration process for both energy policy and environment policy and while further integration towards the European energy policy failed the environmental policies took shape in measures such as energy saving The Commission incorporated both energy and environmental policies into the EU policy canon and built an institutional framework responding to the insufficiency of national policy answers and the developing environmental

conscience of the European people This book will be of interest to students and scholars of European Integration European Union politics and history and environmental politics and policy

Oral History and the Environment Stephen M. Sloan, Mark Cave, 2022 As uncontrolled development forces crises in the natural world deeply ingrained human connections with the earth are changing Oral history's proven ability to explore issues of race ethnicity class gender and sexuality make it a uniquely effective methodology for bringing in new perspectives to our understanding of environments This book brings together interviews with a global range of activists farmers water system managers victims of catastrophe tribal trustees wilderness rangers reindeer herders and foresters among others whose life experience gives them special insights into human environmental interaction and adaption Commentary by oral historians examines how these stories can be used to better understand our relationship with the natural world Oral History and the Environment takes what could seem broad and impersonal forces such as climate change and environmentalism and crystalizes their meaning through personal stories It overturns narrow historical frameworks bounded artificially by national borders and instead portrays the issues facing our common ecosystems
