The Social Origins of Modern Science P. Zilsel, 2013-03-07 Edgar Zilsel 1891-1944 lived through the best of times and worst of times through the renewal of scientific optimism and humane politics and through the massive social collapse into idolatrous barbarism With it all and with his personal and family crises in Vienna and later in America Zilsel was I believe a heroic indeed a model scholar of the first half of the 20th century He was widely admired as a teacher at high schools in workers education in research tutoring and seminars He was an original investigator on matters of the methodology of science and of the history of the sciences He was a social and political analyst as a critical Marxist of the turmoil of Vienna in the 20s Above all he achieved so much as a sociological historian who undertook research on two central facts of the early modern world recognition of the creative individual and the ideal of genius and the conditions and realities of the coming of science to European civilization

*Thought Collectives and Cultural Change* Stephen Dersley, 2025-08-16 This book investigates Ludwik Fleck's thought as a radical critique of institutionalized knowledge production clarifying and extending his concepts to form an updated methodology It reconstructs the cultural and institutional factors that as Fleck insisted are interactional i.e. shaped by entangled processes rather than a single determinant Offering an alternative to dominant models of cultural change it demonstrates how new thought styles emerge circulate and face resistance in moments of revolutionary transformation The central question addressed is how certain communities come to think in new ways both in response to and contributing to cultural transformations Such changes are fiercely contested through censorship exclusion and institutional control When Fleck's concepts are enhanced by discourse analysis these struggles can be revealed archaeologically showing the layers of contestation beneath claims to neutrality and purity Tracing these conflicts from antiquity to modernity this book examines how thought styles are marginalized suppressed or institutionalized It examines the oligarchic thought style in Plato's responses to cultural trauma and loss of control follows the spread of the Socratic

caesura through Cicero's philosophia and Shaftesbury's civic reactivation of Socrates and analyzes its role in the German university system. There following the exclusion of Hobbes and Spinoza Bildung became philosophy's means of asserting autonomy from theological control culminating in Kant's Conflict of the Faculties. This book rejects single determinant models of cultural change: economic, epistemic, discursive, or technological, while also challenging entrenched dichotomies such as myth vs logos, Enlightenment vs Counter Enlightenment, and the public sphere vs the state. Expanding on Fleck's theory of thought styles, it develops an open epistemology that continuously reveals new dimensions of cultural facts and their institutional regulation. The book offers a methodologically innovative framework for understanding cultural change. As such, it will be of interest to scholars of philosophy, intellectual history, discourse analysis, and the history of ideas, as well as those exploring the interplay of thought, power, and institutional authority.

*Theory in Social and Cultural Anthropology* R. Jon McGee, Richard L. Warms, 2013-08-28. Social and cultural anthropology and archaeology are rich subjects with deep connections in the social and physical sciences. Over the past 150 years, the subject matter and different theoretical perspectives have expanded so greatly that no single individual can command all of it. Consequently, both advanced students and professionals may be confronted with theoretical positions and names of theorists with whom they are only partially familiar if they have heard of them at all. Students in particular are likely to turn to the web to find quick background information on theorists and theories. However, most web-based information is inaccurate and/or lacks depth. Students and professionals need a source to provide a quick overview of a particular theory and theorist with just the basics: the who, what, where, how, and why, if you will. In response, SAGE Reference plans to publish the two-volume *Theory in Social and Cultural Anthropology: An Encyclopedia*. Features/Benefits: Two volumes containing approximately 335 signed entries provide users with the most authoritative and thorough reference resource available on anthropology theory, both in terms of breadth and depth of coverage. To ease navigation between and among related entries, a Reader's Guide groups entries thematically, and each entry is followed by Cross References. In the electronic version, the Reader's Guide combines with the Cross References and a detailed Index to provide robust search and browse capabilities. An appendix with a Chronology of Anthropology Theory allows students to easily chart directions and trends in thought and theory from early times to the present. Suggestions for Further Reading at the end of each entry and a Master Bibliography at the end guide readers to sources for more detailed research and discussion.

Leonardo da Vinci: The Daedalian Mythmaker, This study is the first to consider the whole body of Leonardo's works with an eye to a comprehensive interpretation that combines both cultural history and the history of ideas. According to Maiorino, Leonardo's was a mythmaking mode of activity that had a Daedalian range and affected art and technology alike. As both artist and inventor, Leonardo did not separate reason from experience, empiricism from abstraction, an attitude Maiorino characterizes as Anti Humanism. Rather than accepting the earlier view that the culture of the Renaissance was divided against itself or that it came to be divided, he argues that anti Humanism was present from the start.

in such founders as Petrarch and Alberti and continued to be a current in later authors and artists hence the significance of Leonardo to Humanism and to Baroque and Renaissance culture at large

**Inventing Western Civilization** Thomas C. Patterson,1997 In this wonderful book Thomas Patterson effectively dethrones the concept of civilization as an abstract good transcending human society Martin Bernal Drawing on his extensive knowledge of early societies Thomas C Patterson shows how class sexism and racism have been integral to the appearance of civilized societies in Western Europe He lays out clearly and simply how civilization with its designs of civilizing and being civilized has been closely tied to the rise of capitalism in Western Europe and the development of social classes
