Sampling For Social Research Surveys 1947 198:

Handbook of Research Design and Social Measurement Delbert C. Miller, Neil J. Salkind, 2002-01-16 If a student researcher had only one handbook on their bookshelf Miller and Salkind's Handbook would certainly have to be it. With the updated material, the addition of the section on ethical issues which is so well done that I'm recommending it to the departmental representative to the university IRB and a new Part 4 on Qualitative Methods, the new Handbook is an indispensable resource for researchers. Dan Cover, Department of Sociology, Furman University. I have observed that most instructors want to teach methodology their way to imbue the course with their own approach. Miller Salkind allows one to do this easily. The book is both conceptually strong e.g. very good coverage of epistemology, research design and statistics and at the same time provides a wealth of practical knowledge: scales, indices, professional organizations, computer applications etc. In addition, it covers the waterfront of methodology. Michael L. Vasu, Director of Information Technology, North Carolina State University. A unique and excellent reference tool for all social science researchers and a good textbook for graduate students and senior year undergraduate classes. These students are about to enter the real life of research and need a handy and comprehensive tool as a starting point that offers shortcuts for getting into real research projects. For a small project, the book offers enough information to get the project started. For big projects, the book is ideal for information on where to look for things and examples. Jianhong Liu, Department of Sociology, Rhode Island College. The book, considered a necessity by many social science researchers and their students, has been revised and updated while retaining the features that made it so useful. The emphasis in this new edition is on the tools graduate students and more advanced researchers need to conduct high quality research. Features: Benefits: Provides step by step instruction for students' research training by beginning with how to find a creative idea, a middle range theory and initial hypothesis and proceeds through design, proposal, collection and analysis of data, followed by writing, reporting and publication. Section on scales and indices are organized so that readers can quickly locate and find the type of scale or index in which they may be interested. All sections are now followed by useful and well considered reference sections so that readers can read more about each topic. Includes updated coverage on new scales, internal and external validity and new analytic techniques with extensive references on each. Presents extensive coverage of how to prepare manuscripts for publication including a list of all journals covered by Sociological Abstracts along with the editorial office address and URL for each entry. Discusses the importance of policy research with presentation and discussion of specific models as an adjunct to both applied and basic research techniques. Provides extensive coverage of funding opportunities including those offered by the National Institutes of Health, the National Science Foundation and a directory of private funding sources including relevant contact information. New to this edition: New Part 4 by John Creswell and Ray Maietta provides a comprehensive introduction to qualitative methods including a review of existing computer applications for collecting and analyzing data. New and more current reviews and commentaries have replaced dated or no longer

relevant excerpts Thousands of new references on the assessment of important sociological variables as well as references to such topics as statistical analysis computer applications and specific topics Thoroughly updated information on the use of computers and online research techniques including beginning and intermediate material about the Internet and its use by the modern research scientist Coherent and thoughtful review of the most popular statistical analysis software packages New guidelines and discussion of ethical practices in social and behavioral science research including extensive coverage of institutional review board procedures and activities Expansion of social indicators to include international coverage Plus there is an extensive and well organized table of contents with four levels of headings and for the first time in the history of the book a comprehensive index Publications University of Michigan. Institute for Social Research, Survey Research in the United States Jean M. Converse, 2017-07-05 Hardly an American today escapes being polled or surveyed or sampled In this illuminating history Jean Converse shows how survey research came to be perhaps the single most important development in twentieth century social science Everyone interested in survey methods and public opinion including social scientists in many fields will find this volume a major resource Converse traces the beginnings of survey research in the practical worlds of politics and business where elite groups sought information so as to influence mass democratic publics and markets During the Depression and World War II the federal government played a major role in developing surveys on a national scale In the 1940s certain key individuals with academic connections and experience in polling business or government research brought surveys into academic life By the 1960s what was initially viewed with suspicion had achieved a measure of scientific acceptance of survey research The author draws upon a wealth of material in archives interviews and published work to trace the origins of the early organizations the Bureau of Applied Social Research the National Opinion Research Center and the Survey Research Center of Michigan and to capture the perspectives of front line figures such as Paul Lazarsfeld George Gallup Elmo Roper and Rensis Likert She writes with sensitivity and style revealing how academic survey research along with its commercial and political cousins came of age in the United States Handbook of Public Administration, Second Edition W. Bartley Hildreth, Gerald J. Miller, Jack Rabin, 1997-09-19 This bestselling reference examines all major areas in public administration from the enlightening perspectives of history and the five great concepts or theories framing each topic including public budgeting financial management decision making public law and regulation and political economy The American Reference Books Annual calls this stimulating and thought provoking thorough and inclusive a valuable contribution and Canadian Public Administration said it is impressive an extremely useful reference tool the writing and analysis and the scope of the coverage make the volume a good investment for both government and university libraries **Survey Research in Underdeveloped Countries** Chris J. Dixon, Bridget Leach, 1984 **Current Index to Statistics, Applications, Methods and Theory**, 1999 The Current Index to Statistics CIS is a bibliographic index of publications in statistics probability and related fields **Surveys, Polls, and Samples:** Mildred Parten, 1950

Sentencing as a Human Process John Hogarth,1971-12-15 Sentencing is not a neutral or mechanical act it is a human process highly charged affectively and motivationally Sentencing decisions take place in a social environment of laws facts ideas and people This study of sentencing behaviour is primarily concerned with the mental processes involved in decision making It is based on intensive interviews and on measures of the information processing ability of seventy one full time judges in Ontario The work covers such topics as problems of sentencing particularly existing disparities social and economic background of judges and their varying penal philosophies the nature and measurement of judicial attitudes toward crime punishment and related issues prediction of sentencing behaviour based on attitude scales which the author has constructed and also on fact patterns perceived by judges and the impact of social and legal constraints on the sentencing process The study concludes that there exists a very high correlation between a judges definition of situation and the sentence which he imposes and that while sentences meted out for a particular law violation under similar circumstances may differ among judges judges are highly consistent within themselves Using these conclusions the author constructs a model of judicial behaviour and shows how this model can be used to predict and to explain sentencing and breaks new ground in the use of the social and behavioural sciences as sources of data to explain the sentencing process
