Levine, 2013-01-11 Although eating problems ranging from body dissatisfaction and dieting to anorexia nervosa or bulimia nervosa can begin and typically have their roots in childhood theory and research in developmental psychopathology and developmental psychology have not received substantial attention in eating disorders research This book provides crucial background material from both fields and then makes direct applications to numerous aspects of the field of eating disorders including theory research treatment and primary prevention This book was born out of a transaction between frustration and optimism The frustrations reflected the limitations of current knowledge about eating problems and disorders Etiological causes which are sensitive and specific to eating disorders have been elusive Although there is some understanding of risk factors little is known about protective factors This has made prevention among other things difficult Furthermore the mechanisms underlying the association between risk factors and disordered eating are poorly understood For example it is known that women are at greater risk than men are but clinicians are hard pressed to get beyond gender based speculations and demonstrate why this is true The optimism grows from familiarity with the field of developmental psychopathology It seems evident that this approach has much to offer the field of
