Should Psychology Be a Science? Jock Abra, 1998-03-30 The past century has seen many changes in the study of psychology One of those major changes was the adoption of scientific principles to define and build the discipline of psychology These principles were manifested in the discipline s method of investigation and subject matter For many this constituted a revolution in the study of psychology This work examines the results of this revolution and asks whether it has been beneficial The author explains how the psychology science union came about and examines the positive and negative results He then describes the major characteristics of science empiricism generalization hypotheses theories and models analysis reductionism and determinism explaining how each principle was utilized in regard to psychology Dr Abra also includes information on psychology s most eminent authorities who have fundamentally influenced its directions God and Evolution: Creativity In Action Jock Abra, 2015-01-20 Atheism this book argues is unbelievable The universe s wonders couldn t have come about by chance Natural selection alone doesn t produce evolution Therefore since evolution resembles the creative process especially in using trial and error God s creative activity is responsible and human creators reveal much about him However that process is goal directed so evolution must be as well But the goal a Picasso or Darwin pursues is vague They don t know exactly where they re going and make mistakes and so therefore must God Thus Abra rejects the perfect God assumed by many religions and Intelligent Design Why bring back God To restore meaning and purpose to existence and faith s many benefits To better explain how the universe scientific laws and life itself came about and living things attractive but useless properties Other discussions clarify both creativity and the creative God Is there one kind of creativity or many A sex difference Are creators neurotic *Lifestyle Theory* Glenn D.
