recent work and interpretations on the use of underground cavities by Mesoamerica's pre-Columbian cultures demonstrating their invaluable cultural purpose. Case studies from across the region investigate the ways in which these highly charged points in the sacred landscape were the focus of countless political and religious activities. The volume expands the study of caves to focus on the broader realm of subterranean space, introducing the concept of the constructed subterranean, a space in which the Maya deliberately created sacred landmarks through excavation. Chapters critically examine chultuns previously thought to be subterranean storage chambers and sascaberas previously considered mines, demonstrating that the traditional archaeological models are deeply flawed. A wealth of data on both features is used to envision a new sacred landscape filled with thousands of subterranean sacred landmarks. Natural caves are also examined: a survey conducted around the ancient site of Yaxchilan considers the obvious importance of large stalagmites set up in the site core as monuments. Long-distance pilgrimages to these caves fundamentally reevaluate the nature of pilgrimage and reveals an economic and political importance that structured settlement and activities around the pilgrimage sites. Finally, evidence is analyzed to show that the human bones recovered from Midnight Terror Cave, Belize, were the result of human sacrifice. Dealing equally with the archaeology of both natural and constructed subterranean spaces, *Exploring the Mesoamerican Subterranean Realm* challenges preconceived notions of these spaces and their meanings, dramatically shifting the field's focus and extending the understanding of the critical importance of this dark side of archaeology.

The Exploitation of Raw Materials in Prehistory Xavier Terradas Batlle, Telmo Pereira, 2017-11-06. This collection presents state-of-the-art approaches to the use of inorganic raw materials in the period known as prehistory. It focuses on stone tools, adornments, colorants, and pottery from Europe, America, and Africa. The chapters intimately merge archaeology, anthropology, geology, geography, physics, and chemistry to reconstruct past human behaviour, economy, technology, ecology, cognition, territory, and social complexity. The book represents a framework of raw material investigation for those working in science, regardless of the time period, region of the world, or materials they are studying.

Ancient Mesoamerican Population History Adrian S.Z. Chase, Arlen F. Chase, Diane Z. Chase, 2024-05-07. Establishing ancient population numbers and determining how they were distributed across a landscape over time constitute two of the most pressing problems in archaeology. Accurate population data is crucial for modeling, interpreting, and understanding the past. Now, advances in both archaeology and technology have changed the way that such approximations can be achieved. Including research from both highland central Mexico and the tropical lowlands of the Maya and Olmec areas, this book reexamines the demography in ancient Mesoamerica. Contributors present methods for determining population estimates, field methods for settlement pattern studies to obtain demographic data, and new technologies such as LiDAR, light detecting and ranging, that have expanded views of the ground in forested areas. Contributions to this book provide a view of ancient landscape use and modification that was not possible in the twentieth century. This important new work provides new understandings of Mesoamerican urbanism, development, and changes over

Pre-Mamom Pottery Variation and the Preclassic Origins of the Lowland Maya Debra S. Walker, 2023-04-15 Pre Mamom Pottery Variation and the Preclassic Origins of the Lowland Maya summarizes archaeological researchers current views on the adoption and first use of pottery across the Maya lowlands Covering the early Middle Preclassic period when communities began using and producing pottery for the first time roughly 1000-600 BC through to the establishment of a recognizably Maya tradition termed the Mamom ceramic sphere about 600-300 BC the book demonstrates that the adoption was broadly contemporary with variation in how the new technology was adapted locally Analyzing ceramics found at sites in Belize Peten Guatemala and Mexico the contributors provide evidence that the pre Mamom expansion of pottery resulted from increased dependence on maize agriculture exploitation of limestone caprock and greater reliance on a preexisting system of long distance exchange The chapters describe the individual experiences of new potting communities at various sites across the region They are supplemented by appendixes presenting key chronological data as well as the principal types and varieties of pre Mamom ceramic complexes across the various spheres

Pathways to Complexity M. Kathryn Brown, George J. Bey III, 2021-04-27 Pathways to Complexity synthesizes a wealth of new archaeological data to illuminate the origins of Maya civilization and the rise of Classic Maya culture In this volume prominent Maya scholars argue that the development of social religious and economic complexity began during the Middle Preclassic period 1000 300 B C hundreds of years earlier than previously thought Contributors reveal that villages were present in parts of the lowlands by 1000 B C challenging the prevailing models estimating when civilization took root in the area Combining recent discoveries from the northern lowlands an area often neglected in other volumes and the southern lowlands the collection then traces the emergence of sociopolitical inequality and complexity in all parts of the Yucatan peninsula over the course of the Middle Preclassic period They show that communities evolved in different ways due to influences such as geographical location ceramic exchange shell ornament production agricultural strategy religious ritual ideology and social rankings These varied pathways to complexity developed over half a millennium and culminated in the institution of kingship by the Late Preclassic period Presenting exciting work on a dynamic and poorly understood time period Pathways to Complexity demonstrates the importance of a broad comparative approach to understanding Preclassic Maya civilization and will serve as a foundation for future research and interpretation Contributors M Kathryn Brown Dr George Bey III Tara Bond Freeman Fernando Robles Castellanos Tomas Gallareta Negr n E Wyllys Andrews V Anthony Andrews David S Anderson Lauren Sullivan Jaime J Awe James F Garber Mary Jane Acu a
