Wedel, 2016-11-01 The best illustrated and most comprehensive book ever published on the largest land animals the world has ever known From The Land Before Time to Jurassic Park images of fantastically large long necked plant eating dinosaurs have captured our imaginations. These are the sauropods centerpieces of museums and gentle giants of the distant past Imagine what it must have been like to crest a hill and see in the valley below not just one sauropod but an entire herd feeding its way across the landscape The most massive land animals ever to have lived sauropods roamed widely across the continents through most of the Age of Dinosaurs from about 220 to 65 million years ago They reached incredible sizes giving rise to the question Why were they so big Early guesses suggested that they gained protection from predators by virtue of their size which also allowed them to reach the tops of trees in order to eat leaves and conifer needles More recent hypotheses hold that they needed a long and complicated digestive tract due to their consumption of low nutrient food sources size was an offshoot of that need Whatever the explanation there is little doubt that natural selection produced something extraordinary when the Sauropoda diversified into a wide variety of species This book combines majestic artwork and the best of paleontological research to resurrect the lives of sauropods The Sauropod Dinosaurs shows how these amazing creatures raised and defended their young traveled in groups and interacted with the rich diversity of Mesozoic plants and animals Beautiful enough to sit on the coffee table the book also serves as the best reference available on these bygone giants Anyone with a passion for dinosaurs or prehistoric life will cherish this once in a generation masterpiece The book includes the following features Over 200 full color illustrations More than 100 color photographs from museums field sites and collections around the world Thoughtfully placed drawings and charts Clearly written text reviewed by major sauropod researchers Descriptions of the latest sauropod concepts and discoveries A field guide to major groups of sauropods Detailed skeletal reconstructions and anatomical restorations A comprehensive glossary **American Dinosaur Abroad** Ilja Nieuwland, 2019-05-15 In early July 1899 an excavation team of paleontologists sponsored by Andrew Carnegie discovered the fossil remains in Wyoming of what was then the longest and largest dinosaur on record Named after its benefactor the Diplodocus carnegii or Dippy as it s known today was shipped to Pittsburgh and later mounted and unveiled at the Carnegie Museum of Natural History in 1907 Carnegie's pursuit of dinosaurs in the American West and the ensuing dinomania of the late nineteenth century coincided with his broader political ambitions to establish a lasting world peace and avoid further international conflict An ardent philanthropist and patriot Carnegie gifted his first plaster cast of Dippy to the British Museum at the behest of King Edward VII in 1902 an impulsive diplomatic gesture that would result in the donation of at least seven reproductions to museums across Europe and Latin America over the next decade in England Germany France Austria Italy Russia Argentina and Spain In this largely untold history Ilja Nieuwland explores the influence of Andrew Carnegie's prized skeleton on European culture through the dissemination reception and agency of his plaster casts
