Problems and Prospects in Long

and Medium Range Weather Forecasting D.M. Burridge, E. Källen, 2012-12-06 Forecasting the weather for the long and medium range is a difficult and scientifically challenging problem Since the first operational weather prediction by numerical methods was carried out on the BESK computer in Stockholm Sweden 1954 there has been an ever accelerating development in computer technology Hand in hand has followed a tremendous increase in the complexity of the atmospheric models used for weather prediction The ability of these models to predict future states of the atmosphere has also increased rapidly both due to model development and due to more accurate and plentiful observations of the atmosphere to define the initial state for model integrations It may however be argued on theoretical grounds that even if we have an almost perfect model with almost perfect initial data we will never be able to make an accurate weather prediction more than a few weeks ahead This is due to the inherent instability of the atmosphere and work in this field was pioneered by E Lorenz It is generally referred to as atmospheric predictability and in the opening chapter of this book Professor Lorenz gives us an overview of the problem of atmospheric predictability The contributions to this book were originally presented at the 1981 ECMWF Seminar ECMWF European Centre for Medium Range Weather Forecasts which was held at ECMWF in Reading England in September 1981

Models of Decision-Making Paul Weirich, 2015-02-05 Classical decision theory evaluates entire worlds specified so as to include everything a decision maker cares about Thus applying decision theory requires performing computations far beyond an ordinary decision maker's ability In this book Paul Weirich explains how individuals can simplify and streamline their choices He shows how different parts of options intrinsic temporal spatiotemporal causal are separable so that we can know what difference one part makes to the value of an option regardless of what happens in the other parts He suggests that the primary value of options is found in basic intrinsic attitudes towards outcomes desires aversions or indifferences And using these two facts he argues that we need only compare small parts of the options we face in order to make a rational decision This important book will interest readers in decision theory economics and the behavioral sciences

The Future of Geological Modelling in Hydrocarbon Development Adam Robinson, 2008 The 3D geological model is still regarded as one of the newest and most innovative tools for reservoir management purposes The computer modelling of structures rock properties and fluid flow in hydrocarbon reservoirs has evolved from a specialist activity to part of the standard desktop toolkit The application of these techniques has allowed all disciplines of the subsurface team to collaborate in a common workspace In today's asset teams the role of the geological model in hydrocarbon development planning is key and will be for some time ahead The challenges that face the geologists and engineers will be to provide more seamless interaction between static and dynamic models This interaction requires the development of conventional and unconventional modelling algorithms and methodologies in order to provide more risk assessed scenarios thus enabling geologists and engineers to better understand and capture inherent uncertainties at each aspect of the geological model's life
