Coppola, 2007-01-01 The establishment of fishery statistics and information systems in many countries of the General Fishery Commission for the Mediterranean GFCM continues to be considered a high priority activity and the need to monitor fishing activities and provide fishery management at all levels with accurate reliable and timely data which can interact with stock assessment and economic and socioeconomic studies for decision making is constantly increasing In accordance with FAO and the GFCM mandate the objective of MedStat is to contribute to the sustainable and responsible fisheries management of fishery resources and fish production in the Mediterranean Sea through the implementation of a long lasting statistical and information programme which will provide a sound basis for decision making The whole national statistical system developed within this activity consists of a set of databases and associated statistical data collection and implementation methodologies and procedures that primarily cover the fishing vessel census catch and effort surveys and other surveys targeting monitoring and management issues Strengthening the capability of the fisheries institutions of the Mediterranean countries in marine fishery statistics and information systems with a view to meeting the relevant national needs and requirements for participation in and complementing in its entirety the Mediterranean Fishery Statistics and Information System is also considered a priority issue of MedStat

Effects of Riverine Inputs on Coastal Ecosystems and Fisheries Resources

, 1995-01-01 Five chapters are presented which address a number of aspects of riverine and runoff effects on coastal marine systems Examples are presented and documented in which the apparent effects of runoff related nutrient enrichment and consequent eutrophication have been important Various other aspects such as sedimentation etc are explored The purpose is to advance the scientific policy and political dialogue on issues related to utilization and protection of coastal marine ecosystems The Marine Catchment Basin or MCB appears to be the logical scale of policy and management interest wherever terrestrial runoff has substantial impacts on a marine system The MCB expands the marine ecosystem concept to include not only the marine aquatic system but also the adjacent land areas that drain into it The MCB concept has been identified primarily with semi enclosed seas where effects have been particularly dramatic and where the catchment basin retains an easily visualized geological context However even along open ocean coasts hydrodynamic processes act to retain coherent

masses of water together with their contained organisms and materials against the coast Thus open coastal areas may exhibit MCB features similar to those of enclosed or semi enclosed basins Examen de l'état des ressources ichtyologiques marines mondiales ,1994 *Sociétés maritimes, droits et institutions des pêches en Méditerranée occidentale* Food and Agriculture Organization of the United Nations,2001-01-01 Depuis des temps immémoriaux la Méditerranée est riche d'expériences d'aménagement basées sur des droits collectifs et des systèmes de centralisation de discipline professionnelle Ce document aborde les politiques de gestion des pêches en Méditerranée au regard des nouveaux objectifs de durabilité et de gouvernance L'accent est placé sur la décentralisation de l'action publique et la réforme des mécanismes institutionnels *Feasibility Assessment for a Database on Socio-economic Indicators for Mediterranean Fisheries* Ramón Franquesa,Mohammed Malouli Idrissi,José Antonio Alarcón,2001-01-01 This pilot study on the construction of socio economic indicators was useful in demonstrating the possibilities of developing indicators and of their application for building an understanding of main socio economic trends within a Mediterranean fisheries management unit Доклад ФАО По Рыболовству ,1996
