Recent Advances in Differential Equations H-H Dai, P.L. Sachdev, 2020-01-30

The First Pan China Conference on Differential Equations was held in Kunming China in June of 1997

Researchers from around the world attended including representatives from the US Canada and the Netherlands but the majority of the speakers hailed from China and Hong Kong

This volume contains the plenary lectures and invited talks presented at that conference and provides an excellent view of the research on differential equations being carried out in China

Most of the subjects addressed arose from actual applications and cover ordinary and partial differential equations

Topics include

Superlinear Parabolic Problems Prof. Dr. Pavol Quittner, Prof. Dr. Philippe Souplet, 2019-06-13

This book is devoted to the qualitative study of solutions of superlinear elliptic and parabolic partial differential equations and systems

This class of problems contains in particular a number of reaction diffusion systems which arise in various mathematical models especially in chemistry physics and biology

The first two chapters introduce to the field and enable the reader to get acquainted with the main ideas by studying simple model problems respectively of elliptic and parabolic type

The subsequent three chapters are devoted to problems with more complex structure namely elliptic and parabolic systems equations with gradient depending nonlinearities and nonlocal equations

They include many developments which reflect several aspects of current research

Although the techniques introduced in the first two chapters provide efficient tools to attack some aspects of these problems they often display new phenomena and specifically different behaviors whose study requires new ideas

Many open problems are mentioned and commented

The book is self contained and up to date it has a high didactic quality

It is devoted to problems that are intensively studied but have not been treated so far in depth in the book literature

The intended audience includes graduate and postgraduate students and researchers working in the field of partial differential equations and applied mathematics

The first edition of this book has become one of the standard references in the field

This second edition provides a revised text and contains a number of updates reflecting significant

recent advances that have appeared in this growing field since the first edition Recent Advances On Elliptic And Parabolic Issues - Proceedings Of The 2004 Swiss-japanese Seminar Michel Marie Chipot,Hirokazu Ninomiya,2006-03-01

Topological Circle Planes and Topological Quadrangles Andreas E Schroth,1995-11-03 This research note presents a complete treatment of the connection between topological circle planes and topological generalized quadrangles The author uses this connection to provide a better understanding of the relationships between different types of circle planes and to solve a topological version of the problem of Apollonius Topological Circle Planes and Topological Quadrangles begins with a foundation in classical circle planes and the real symmetric generalized quadrangle and the

connection between them This provides a solid base from which the author offers a more generalized exploration of the topological case He also compares this treatment to the finite case Subsequent chapters examine Laguerre M bius and Minkowski planes and their respective relationships to antiregular quadrangles The author addresses the Lie geometry of each and discuss the relationships of circle planes the sisters of M bius Laguerre and Minkowski planes and concludes by solving a topological version of the problem of Apollonius in Laguerre M bius and Minkowski planes The treatment offered in this volume offers complete coverage of the topic The first part of the text is accessible to anyone with a background in analytic geometry while the second part requires basic knowledge in general and algebraic topology Researchers interested in geometry particularly in topological geometry will find this volume intriguing and informative Most of the results presented are new and can be applied to various problems in the field of topological circle planes Features
