Food Biotechnology: Principles and Practices Vinod K. Joshi, R.S. Singh, 2012-03-10 This book covers the course of Food Biotechnology adopted by various universities. The book is primarily meant for undergraduate and postgraduate classes as a Reference cum Textbook. It would be very useful both from teaching and research point of view. All the chapters in the book are contributed by the experts in their respective fields of research. These are intended to equip the readers with the basics and applied research in food biotechnology. To make concepts more clear, the contents have been divided into following sections. The aim is to develop an authentic account of biotechnology in the food industry and stimulate research in food biotechnology. Unlike the past, the present food industry is profitably deriving benefits from bioengineering. These applied aspects are covered so that the students could take relevant assignments in the food industry. It also highlights future needs of research on the various aspects of food biotechnology. The book includes topics like biosensors, biocolours, biopreservatives, probiotics, genetically modified foods and microbial flavours. The book addresses various disciplines of food microbiology, food biotechnology, food engineering and postharvest technology. **Advances in Food Science and Technology, Volume 1** Visakh P. M., Sabu Thomas, Laura B. Iturriaga, Pablo Daniel Ribotta, 2013-03-04 Written in a systematic and comprehensive manner, the book reports recent advances in the development of food science and technology areas. Advances in Food Science and Technology discusses many of the recent technical research accomplishments in the areas of food science and technology such as food security as a global issue, food chemistry, frozen food and technology as well as state of the art developments concerning food production, properties, quality, trace element speciation, nanotechnology and bionanocomposites for food packing applications. Specifically, this important book details new innovative methods for food formulations and novel nanotechnology applications such as food packaging, enhanced barrier, active packaging and intelligent packaging. Freezing methods and equipment such as freezing by contact with cold air, cold liquid and cold surfaces, cryogenic freezing and a combination of freezing methods. Chemical and functional properties of food components.
