Receptor Activation By Antigens Cytokines Hormones And G:

Receptor Activation by Antigens, Cytokines, Hormones, and Growth Factors David Naor,1995 Upon ligand binding cell surface receptors transmit activity signals into the cell activating multiple metabolic and mitogenic pathways Although the nature of the stimulatory molecules is infinitely varied the principles involved in propagating the signals are ubiquitous Thus such different stimulators as antigens cytokines hormones and growth factors use similar transduction principles including ligand induced receptor internalisation of receptor ligand complexes activation of G proteins oligomerisation increases in Ca² uptake activation of tyrosine kinases or other kinases and phosphatases protein phosphorylation or dephosphorylation and the triggering of oncogenes and transcription factors The signalling molecules interact with each other through universal zippers such as SH2 and SH3 domains This volume integrates the work of the most significant contributors to the field in elucidating the mechanisms involved in these signal transduction pathways Receptor Activation by Antigens, Cytokines, Hormones, and Growth Factors ,2006 Biomedical Index to PHS-supported Research ,1987 Mononuclear Leukocytes—Advances in Research and Application: 2013 Edition ,2013-06-21 Mononuclear Leukocytes Advances in Research and Application 2013 Edition is a ScholarlyEditions book that delivers timely authoritative and comprehensive information about Lymphocytes The editors have built Mononuclear Leukocytes Advances in Research and Application 2013 Edition on the vast information databases of ScholarlyNews You can expect the information about Lymphocytes in this book to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of Mononuclear Leukocytes Advances in Research and Application 2013 Edition has been produced by the world s leading scientists engineers analysts research institutions and companies All of the content is from peer reviewed sources and all of it is written assembled and edited by the editors at ScholarlyEditions and available exclusively from us You now have a source you can cite with authority confidence and credibility More information is available at <http://www.ScholarlyEditions.com> Cytokines and Cytokine Receptors Constantin A. Bona,Jean-Pierre Revillard,2001-03-07 The field of cytokine research is expanding at a rapid pace Contributions from the major leading groups in the world on the structure and biological properties of cytokine and cytokine receptors as well as integrated reviews on cytokines in various physiological and pathological conditions were presented in three issues of International Reviews of Immunology This collection of articles provided a unique source of information However important discoveries are emerging very rapidly and some of the reviews written in 1997 are already outdated In this book the editors assemble reviews that have been updated by their authors to include all the recent publications and unpublished data from the authors laboratories This volume should serve as an excellent reference source for all those concerned by the multiple faces of cytokines in basic research and in the clinic **Allergy Frontiers:Future Perspectives** Ruby Pawankar,Stephen T. Holgate,Lanny J. Rosenwasser,2009-11-10 When I entered the field of allergy in the early 1970s the standard textbook was a few hundred

pages and the specialty was so compact that texts were often authored entirely by a single individual and were never larger than one volume Compare this with Allergy Frontiers Epigenetics Allergens and Risk Factors the present s volume text with well over 150 contributors from throughout the world This book captures the explosive growth of our specialty since the single author textbooks referred to above The unprecedented format of this work lies in its meticulous attention to detail yet comprehensive scope For example great detail is seen in manuscripts dealing with topics such as Exosomes naturally occurring minimal antigen presenting units and Neuropeptide S receptor 1 NPSR1 an asthma susceptibility gene The scope is exemplified by the unique approach to disease entities normally dealt with in a single chapter in most texts For example anaphylaxis a topic usually confined to one chapter in most textbooks is given five chapters in Allergy Frontiers This approach allows the text to employ multiple contributors for a single topic giving the reader the advantage of being introduced to more than one vi point regarding a single disease

Cytokine Regulation of Humoral Immunity

Clifford M. Snapper,1996-08-06 This work focuses on the impact of the cytokine network on the humoral immune response as well as on its implications for the evolving field of cytokine based medical therapeutics Scientists interested in how cytokines regulate the production of antibody and the selective expression of distinct antibody classes in response to microbial and other antigenic challenges now have a single comprehensive and timely volume covering this complex field
