Mathematical Correspondences and Critical Editions Maria Teresa Borgato, Erwin Neuenschwander, Irène

Passeron, 2019-03-22 Mathematical correspondence offers a rich heritage for the history of mathematics and science as well
as cultural history and other areas It naturally covers a vast range of topics and not only of a scientific nature it includes
letters between mathematicians but also between mathematicians and politicians publishers and men or women of culture
Wallis Leibniz the Bernoullis D Alembert Condorcet Lagrange Gauss Hermite Betti Cremona Poincar and van der Waerden
are undoubtedly authors of great interest and their letters are valuable documents but the correspondence of less well known
authors too can often make an equally important contribution to our understanding of developments in the history of science
Mathematical correspondences also play an important role in the editions of collected works contributing to the
reconstruction of scientific biographies as well as the genesis of scientific ideas and in the correct dating and interpretation
of scientific writings This volume is based on the symposium Mathematical Correspondences and Critical Editions held at the
6th International Conference of the ESHS in Lisbon Portugal in 2014 In the context of the more than fifteen major and minor
editions of mathematical correspondences and collected works presented in detail the volume discusses issues such as
History and prospects of past and ongoing edition projects Critical aspects of past editions The complementary role of
printed and digital editions Integral and partial editions of correspondence Reproduction techniques for manuscripts images

Evolutionism in Eighteenth-century French Thought Mary Efrosini Gregory, 2008 This book examines how eighteenth century French theorists Maillet Montesquieu La Mettrie Buffon Maupertuis Diderot Rousseau and Voltaire addressed evolutionism Each thinker laid down a building block that would eventually open the door to the mutability of species and a departure from the long held belief that the chain of beings is fixed This book describes how the philosophes established a triune relationship among contemporary scientific discoveries random creationism propelled by the motive and conscious properties of matter and the notion of the chain of being along with its corollaries plenitude and continuity Also addressed is the contemporary debate over whether apes could ever be taught to speak as well as the issue of race and the family of man Tables et index Anne-Marie Chouillet, Annie Becq, 2002
