*Medical and Surgical Aspects of Renovascular Hypertension* J. Rosenthal, H. E. Franz, 1976-09-21      **Clinical Aspects of Renovascular Hypertension** R. van Schilfgaarde, J.C. Stanley, P. van Brummelen, E.H. Overbosch, 2012-12-06 Diagnostic and therapeutic methods and controversies in the management of renovascular hypertension have undergone major changes during the past few years. This book is based on the proceedings of a successful postgraduate Boerhaave Course held in 1982 at the Faculty of Medicine of the University of Leiden, The Netherlands. Current concepts concerning the diagnosis and treatment of renovascular hypertension were presented during this course to an audience composed of physicians, nephrologists, cardiologists, surgeons, urologists, and radiologists. Thus this book aims at offering an overview of those aspects of renovascular hypertension which are relevant to clinical practice. An effort is made to review the currently available modalities of diagnostic procedures both on the basis of modern insights in the pathology and pathophysiology of renovascular hypertension as well as timely results of clinical research. In addition several chapters deal with combinations of these diagnostic procedures in a fashion that can be of practical help in clinical decision making. The medical, surgical and angioplasty modalities of treatment are reviewed. Basic considerations concerning medical treatment and technical aspects of surgical as well as percutaneous angioplasty are presented in detail both separately and in combination. Special attention is given to the problem of renal artery stenosis in kidney transplants. This book offers up-to-date information on clinical aspects of renovascular hypertension useful to a wide range of clinicians in a variety of disciplines.

The underlying causes of the most common forms of hypertension are discussed in separate chapters. Special emphasis is laid on newer pathophysiological aspects of the disease, in particular the vascular wall renin angiotensin system. Furthermore there is in-depth discussion of all the new techniques that are currently available for use in the diagnosis of renal hypertension e.g. ultrasound and Doppler techniques, magnetic resonance imaging and nuclear renography. These techniques are discussed by internationally renowned experts in the field.

*Renovascular Hypertension* Gert Jensen, 1995     *Clinical Nuclear Medicine* Hans-Jürgen Biersack, Leonard M. Freeman, 2008-01-03 The modern era of radionuclide imaging and therapy is well into its seventh decade During this era many national and international textbooks have been published in an attempt to educate not only the practitioners of our medical discipline but also referring physicians and medical students Some of the more recent large multic tural texts such as those by Ell and Ghambir Sandler et al and Henkin et al provide us with very comprehensive reference sources while some of the smaller texts totally written by two or three individuals e.g. Mettler Guiberteau and Ziessman O M ley Thrall have achieved popularity with radiology residents and other physicians in training The concept of Clinical Nuclear Medicine arose 3 years ago from a conversation between the editors who have been close friends for many years We have always felt that our relationship epitomizes one of the major strengths of nuclear medicine which is the very close ties and spirit of educational cooperation that exist between international colleagues We all share the same aim of doing whatever we can to op mize patient care whether it be by introducing new pharmaceuticals and inst ments or by developing new techniques or approaches to performing our broad spectrum of clinical procedures Nuclear medicine physicians have almost uniformly been willing to share their expertise at national and international meetings The ternational nuclear medicine community unlike many other larger specialty areas has remained relatively small It was within this spirit that Clinical Nuclear Medicine was born     *Chesley's Hypertensive Disorders in Pregnancy* James M. Roberts, Gary F. Cunningham, Marshall D.

Lindheimer, 2009-04-16 Hypertensive disorders remain one the major causes of maternal and fetal morbidity and death It is also a leading cause of preterm birth now known to be a risk factor in remote cardiovascular disease Despite this the hypertensive disorders remain marginally studied and their management is commonly controversial Chesley s Hypertensive Disorders in Pregnancy remains one of the beacons to guide this field recognized for its uniqueness and utility The Third Edition continues this tradition focusing on prediction prevention and management for clinicians and is an essential reference text for clinical and basic investigators alike Differing from other texts devoted to preeclampsia it covers the whole gamut of high blood pressure not just preeclampsia NEW TO THE THIRD EDITION     Current Bibliography of Epidemiology, 1972     Management of Renal Hypertension G.R. Catto, 2013-04-17 During the last few years renal hypertension has become a subject of increasing importance The development of improved radiological techniques notably intravenous and intra arterial digital subtraction angiography has made the diagnosis of renal artery stenosis more reliable while advances in

vascular surgery and the introduction of percutaneous trans luminal angioplasty have caused major changes in clinical practice. The increasing use of such potent antihypertensive agents as the angiotensin I converting enzyme inhibitors has emphasized the problem of renal artery stenosis in older patients with wide spread vascular disease as well as improving the prognosis of patients with accelerated hypertension. This book examines the surgical and medical aspects of renal hypertension in the light of these recent advances. Each chapter has been written by a recognized expert in the field and provides information of relevance and practical importance to the average clinician. The developments of the last decade have emphasized that renal hypertension is no longer a matter only for the nephrologist but a subject on which all clinicians should be well informed.
