Replanting The Tree Of Life Towards An International Agenda For Coconut Palm Research:

The Coconut Palm (*Cocos nucifera* L.) - Research and Development Perspectives V. Krishnakumar, P. K.

Thampan, M. Achuthan Nair, 2019-02-15 Since the publication of The coconut palm A monograph in 1960 considerable information has been accrued on the crop through work at research institutes international organisations and development agencies Although coconut cultivation is spread over 93 countries providing employment and creating livelihood opportunities to 64 million families around the globe smallholder coconut farmers are now facing numerous challenges The wide gap between the potential and actual yield is a major concern and as such it is necessary to disseminate knowledge in order to implement research findings Coconut research in India one of the leading coconut producing countries is celebrating its centenary making this an opportune time to review the research and development advances and the relevant technologies This detailed comprehensive book covers all aspects of coconut from the origins to cultivation breeding physiology and value addition as well as subjects of topical interest like nutrition and health biotechnology and climate change and carbon sequestration Written by leading experts in the fields it emphasises that the livelihood of the small coconut landholders is the ultimate aim of scientists and developmental agencies and outlines various important strategies to make coconut farming more remunerative globally It discusses work in all the major coconut growing countries and outlines suggestions for international cooperation Research work on the crop is comparatively difficult because of its perennial nature longevity height long juvenile phase large sized nuts cross pollination and seed propagation As these special features necessitate greater investment of resources time and land it is all the more imperative that research is not duplicated and the information and experience becoming available around the world is shared so that it can be fully utilised In this context periodic publications compiling all the available information on coconut assume greater significance This book is therefore of great value to researchers students extension workers developmental agencies and progressive farmers

Replanting the Tree of Life G. J. Persley, 1992 Executive summary origin and importance of the coconut palm World fats and oils market Current research International research priorities Institutional options for international support Next steps **The Coconut** Steve Adkins, Julianne Biddle, Amirhossein Bazrafshan, Sundaravelpandian Kalaipandian, 2024-01-25 The coconut palm *Cocos nucifera* L is one of the world's most important palms and contributes significantly to the income and livelihood of many people in tropical countries Widely referred to as the tree of life coconut has been used as a source of food drink oil medicine shelter and wood for around 500 years Every part of the coconut palm can be utilized The demand for coconut fruit and its products has increased recently as people have become aware of its nutritional and health benefits especially those of coconut water and virgin coconut oil This book is a key resource for researchers and students in horticulture plant science and agriculture and those interested in the production of tropical crops and practitioners in the coconut industry

Current Advances in Coconut Biotechnology C. Oropeza, J.L. Verdeil, G.R. Ashburner, R. Cardeña, J.M.

Santamaría,2013-04-17 The coconut palm occupies a significant place in the world economy as an important subsistence crop in all the areas in which it is grown Relatively few countries are able to export any quantity of coconut products because of increasing home demands coupled with low productivity Yields are generally well below potential despite recent developments with improved planting stock and agronomic practices In the last 50 years both these aspects have received considerable attention but the focus is shifting to investigate how the use of recently developed biotechnological techniques can benefit the coconut industry This volume the result of the International Symposium on Coconut Biotechnology held in December 1997 in Merida Yucatan Mexico describes recent research in three important areas Standard plant breeding techniques used with coconut have produced improved planting material but progress is inevitably very slow Can more rapid genetic improvement be obtained using molecular techniques The papers presented in this section suggest that such techniques will open up exciting new prospects but only after basic information has been gathered on the genetic status of existing coconut stocks Research using microsatellite techniques seems to provide a useful tool to help to classifying these stocks However only a combination of classical breeding methods with modern techniques will lead to the rapid improvement which is required to supply material for urgent replanting programs **Coconut Genetic Resources** Pons Batugal,2005

Research and Development of Coconut in Latin America and the Caribbean , **The Agronomy and Economy of Important Tree Crops of the Developing World** K.P. Prabhakaran Nair,2010-04-22 Major tree crops contribute substantially to the economy of many developing countries on the Asian African and Latin American continents For example coffee is the main revenue earner for Kenya This book provides a comprehensive review of the agronomy botany taxonomy genetics chemistry economics and future global prospects of a range of crops that have great food industrial and economic value such as cocoa coffee cashew oil palm and natural rubber Discusses the major tree crops of great economic value to the developing world The author is an eminent scientist who has won numerous awards for his work in this area Primates Face to Face Agustín Fuentes,Linda D. Wolfe,2002-01-17 As our closest evolutionary relatives nonhuman primates are integral elements in our mythologies diets and scientific paradigms yet most species now face an uncertain future through exploitation for the pet and bushmeat trades as well as progressive habitat loss New information about disease transmission dietary and economic linkage and the continuing international focus on conservation and primate research have created a surge of interest in primates and focus on the diverse interaction of human and nonhuman primates has become an important component in primatological and ethnographic studies By examining the diverse and fascinating range of relationships between humans and other primates and how this plays a critical role in conservation practice and programs *Primates Face to Face* disseminates the information gained from the anthropological study of nonhuman primates to the wider academic and non academic world *Proceedings of an International Workshop on Lethal Yellowing-like Diseases of Coconut, Elmina, Ghana, November 1995* Simon J. Eden-Green,Francis Ofori,1997 Comprehensive accounts of the present distribution and

impact of this group of diseases are presented in this publication along with leading contributions on aspects of disease diagnostics physiology and epidemiology of phytoplasmas A full account of the discussions and recommendations for future actions is also provided The Proceedings will be of particular interest to those researchers policy makers and palm enthusiasts worldwide who value the coconut palm for its role in sustainable agriculture and also for its contribution to amenity and landscape plantings

Economic and Ecological Significance of Arthropods in Diversified Ecosystems

Akshay Kumar Chakravarthy, Shakunthala Sridhara, 2016-10-20 Arthropods are invertebrates that constitute over 90% of the animal kingdom and their bio ecology is closely linked with global functioning and survival Arthropods play an important role in maintaining the health of ecosystems provide livelihoods and nutrition to human communities and are important indicators of environmental change Yet the population trends of several arthropods species show them to be in decline Arthropods constitute a dominant group with 1.2 million species influencing earth's biodiversity Among arthropods insects are predominant with ca 1 million species and having evolved some 350 million years ago Arthropods are closely associated with living and non living entities alike making the ecosystem services they provide crucially important In order to be effective plans for the conservation of arthropods and ecosystems should include a mixture of strategies like protecting key habitats and genomic studies to formulate relevant policies for in situ and ex situ conservation This two volume book focuses on capturing the essentials of arthropod inventories biology and conservation Further it seeks to identify the mechanisms by which arthropod populations can be sustained in terrestrial and aquatic ecosystems and by means of which certain problematic species be managed without producing harmful environmental side effects This edited compilation includes chapters contributed by over 80 biologists on a wide range of topics embracing the diversity distribution utility and conservation of arthropods and select groups of insect taxa More importantly it describes in detail the mechanisms of sustaining arthropod ecosystems services and populations It addresses the contribution of modern biological tools such as molecular and genetic techniques regulating gene expression as well as conventional indigenous practices in arthropod conservation The contributors reiterate the importance of documenting and understanding the biology of arthropods from a holistic perspective before addressing conservation issues at large This book offers a valuable resource for all zoologists entomologists ecologists conservation biologists policy makers teachers and students interested in the conservation of biological resources

Advances in Irrigation Agronomy M. K. V. Carr, 2012-04-05 Examines the factors influencing

water productivity in nine key plantation crops in the context of increased pressure on water resources

Interrogating Development Gisela Mateos, Edna Suárez-Díaz, 2025-05-26 This volume explores the diverse meanings and ways of implementing development programs and technical assistance projects through several case studies grounded in Mexico but transcending its geography Despite or perhaps because of claims of revolutionary nationalism Mexico played a crucial international role during the decades following World War II both by challenging and enacting developmentalist models

values and projects that stressed national priorities resonating beyond its borders and even outside Latin America Energy irrigation communication infrastructures nuclear technologies public health and patents are meaningful examples explored in this volume of the mobilisation of science and technologies understood in a broad sense including not only the natural and social sciences but also bureaucratic technologies that accompanied infrastructural and industrial projects These case studies interrogate the specific agents and mechanisms of technical assistance put to work to meet local priorities which in turn required and informed different international models and ideas of development

Agricultural Biotechnology G. J. Persley, Reginald MacIntyre, 2002 This book through its overview chapter and 12 country studies provides useful information on the evolving biotechnological research in Asia Africa and Latin America The emphasis is on the potential biotechnologies hold for agriculture in developing countries The reports vary in depth of coverage but all combine to show the urgent need that exists for public and private sector investment to ensure that all countries share in the benefits of modern

biotechnologies while minimizing any unintended effects The book contains a subject index

Oilseeds: Health Attributes and Food Applications Beenu Tanwar, Ankit Goyal, 2020-10-30 Oilseeds offer a plethora of opportunities for the food and feed industry thanks to their high oil and protein content Their phytonutrients and functional components have attracted the interest of researchers leading to the development of functional foods This book gathers the latest scientific information on the nutrients phytonutrients and health benefits as well as the adverse effects of consuming various conventional and non conventional oilseeds In addition each chapter includes a section comprehensively explaining the use of oilseeds in functional bakery dairy and other food products Given its scope the book is a valuable resource for students researchers nutritionists food scientists and technologists and for anyone involved in product development based on oilseed and its components

Wildlife in Asia John Knight, 2004-07-31 Drawing on anthropological and historical data this book examines human wildlife relations in China Tibet Japan Bhutan Indonesia the Philippines Malaysia India Thailand and Vietnam The volume initially focuses on the various ways in which wild animals are exploited as a resource for food medicine and crop picking labour before examining animals termed as pests or predators that are deemed to be harmful and dangerous Bringing together anthropologists and historians this book analyses the range variability and historical mutability of human sensibilities towards animals in Asia and will be of interest to Asianists and anthropologists alike

Second International Symposium on Ornamental Palms and Other Monocots from the Tropics Manuel Caballero Ruano, 1999

Plant Virus Epidemiology, 2006-12-15 Published since 1953 *Advances in Virus Research* covers a diverse range of in depth reviews providing a valuable overview of the current field of virology In 2004 the Institute for Scientific Information released figures showing that the series has an Impact Factor of 2.576 with a half life of 7.1 years placing it 11th in the highly competitive category of Virology Edited by an experienced plant pathologist who has over 50 years experience in plant virus epidemiology Covers topics such as Evolutionary epidemiology of plant virus disease The control of tropical plant virus

diseases and Control of plant virus diseases A valuable resource for students and researchers alike Virus and Virus-like Diseases of Major Crops in Developing Countries Gad Loebenstein, George Thottappilly, 2013-12-18 It appears that a comprehensive and up to date book on the impact of virus diseases on the major crops in developing countries is now much needed especially as there have been rapid advances in the biological and molecular characterization and detection of the pathogens and possible approaches for their control On the other hand the economic losses caused by many of these diseases are tremendous and much of the accumulated knowledge to diminish the crop losses has not filtered through or cannot be applied This book is focused on the important crops Each chapter on a specific crop will include inter alia geographical distribution the viruses symptoms damage detection a brief description of the viruses concerned and present and future ways for their control Experts from India Nigeria UK USA France Germany Peru Japan Australia Netherlands Venezuela Kazakhstan and Israel many of them from the International Research Institutions have contributed chapters to this book
