Reporting On Risk How The Mass Media Portray Accidents Diseases Disasters And Other Hazards:

Reporting on Risk Eleanor Singer, Phylliss M. Endreny, 1993-05-18 After acts of airline terrorism air travel tends to drop dramatically yet Americans routinely pursue the far riskier business of driving cars where accidents resulting in death or injury are much more likely to occur Reporting on Risk argues that this selective concern with danger is powerfully shaped by the media whose coverage of potentially hazardous events is governed more by a need to excite the public than to inform it Singer and Endreny survey a wide range of print and electronic media to provide an unprecedented look at how hundreds of different hazards are presented to the public from toxic waste and food poisoning to cigarette smoking from transportation accidents to famine and from experimental surgery to communicable diseases Their investigations raise thought provoking questions about what the media tell us about modern risks which hazards are covered and which ignored and how the media determine when hazards should be considered risky Are natural hazards reported differently than man made hazards Is greater emphasis placed on the potential benefits or the potential drawbacks of complex new technologies Are journalists more concerned with reporting on unproven cures or informing the public about preventative measures Do newspapers differ from magazines and television in their risk reporting practices Reporting on Risk investigates how the media place blame for disasters and looks at how the reporting of risks has changed in the past twenty five years as such hazards as nuclear power birth control methods and industrial by products have grown in national prominence The authors demonstrate that the media often fail to report on risks until energized by the occurrence of some disastrous or dramatic event the Union Carbide pesticide leak in Bhopal the Challenger explosion the outbreak of famine in Somalia or the failed transplant of a baboon heart to Baby Fae Sustained attention to these hazards depends less on whether the underlying issues have been resolved than on whether they continue to unfold in newsworthy events Reporting on Risk examines the accuracy and the amount of information we receive about our environment It offers a critical perspective on how our perceptions of risk as shaped by the media may contribute to misguided individual and public choices for action and prevention in an increasingly complex world The authors probing assessment of how the media report a vast array of risks offers insights useful to journalists policy analysts risk specialists legislators and concerned citizens

Environmental Risks and the Media Barbara Adam, Stuart Allan, Cynthia Carter, 2013-01-11 Environmental Risks and the Media explores the ways in which environmental risks threats and hazards are represented transformed and contested by the media At a time when popular conceptions of the environment as a stable natural world with which humanity interferes are being increasingly contested the medias methods of encouraging audiences to think about environmental risks from the BSE or mad cow crisis to global climate change are becoming more and more controversial Examining large scale disasters as well as everyday hazards the contributors consider the tensions between entertainment and information in media coverage of the environment How do the media frame expert counter expert and lay public definitions of environmental risk What role do environmental pressure groups like

Greenpeace or eco warriors and green guerrillas play in shaping what gets covered and how Does the media emphasis on spectacular events at the expense of issue sensitive reporting exacerbate the public tendency to overestimate sudden and violent risks and underestimate chronic long term ones

Handbook of Risk and Crisis Communication Robert L. Heath, H. Dan O'Hair, 2020-10-28 The Handbook of Risk and Crisis Communication explores the scope and purpose of risk and its counterpart crisis to facilitate the understanding of these issues from conceptual and strategic perspectives Recognizing that risk is a central feature of our daily lives found in relationships organizations governments the environment and a wide variety of interactions contributors to this volume explore such questions as What is likely to happen to whom and with what consequences To what extent can science and vigilance prevent or mitigate negative outcomes and What obligation do some segments of local national and global populations have to help other segments manage risks shedding light on the issues in the quest for definitive answers The Handbook offers a broad approach to the study of risk and crisis as joint concerns Chapters explore the reach of crisis and risk communication define and examine key constructs and parse the contexts of these vital areas As a whole the volume presents a comprehensive array of studies that highlight the standard principles and theories on both topics serving as the largest effort to date focused on engaging risk communication discussions in a comprehensive manner Now available in paperback the Handbook of Risk and Crisis Communication can be readily used in graduate coursework and individual research programs With perspectives from psychology sociology anthropology political science economics and communication the Handbook provides vital insights for all disciplines studying risk and is required reading for scholars and researchers investigating risk and crisis in various contexts

Working Disasters Eric Tucker, 2016-12-05 Every day workers are injured made ill or killed on the job Most often workers experience these harms individually and in isolation Particular occurrences rarely attract much public attention beyond perhaps a small paragraph in the local newspaper Instead these events are normalized This membrane of normalcy however is ruptured from time to time especially after a disaster This edited collection draws together original case studies written by leading researchers in Australia Canada Great Britain Sweden and the United States that examine the politics of working disasters The essays address two fundamental questions what gets recognized as a work disaster And how does the state respond to one In some instances it seems self evident that a disaster has occurred For example when a mine explodes killing tens or hundreds of workers simultaneously the media and politicians recognize that this is not just a personal tragedy for the families of the victims and that more troubling questions need to be asked about how this could happen In other circumstances however the process that determines what gets recognized as a disaster is much more complicated Working Disasters addresses the politics of recognition in case studies of the long haul trucking industry repetitive strain injuries and lung disease in miners Once it has recognized that a working disaster has occurred the state typically goes beyond its routine responses to the daily toll of work related deaths and injuries Inquiries may be initiated to review the adequacy of regulatory systems and laws may

be amended Sometimes disasters produce meaningful change but often they do not In this text the politics of response is considered in studies of a factory fire the loss of an offshore oilrig lung disease among miners a mine explosion and the prosecution of health and safety offences This book will be of use to occupational health and safety activists and professionals academics and upper year students in industrial relations labour studies labour history law political science and sociology

Speaking of Health Institute of Medicine,Board on Neuroscience and Behavioral Health,Committee on Communication for Behavior Change in the 21st Century: Improving the Health of Diverse Populations,2002-12-11 We are what we eat That old expression seems particularly poignant every time we have our blood drawn for a routine physical to check our cholesterol levels And it s not just what we eat that affects our health Whole ranges of behaviors ultimately make a difference in how we feel and how we maintain our health Lifestyle choices have enormous impact on our health and well being But how do we communicate the language of good health so that it is uniformly received and accepted by people from different cultures and backgrounds Take for example the case of a 66 year old Latina She has been told by her doctor that she should have a mammogram But her sense of fatalism tells her that it is better not to know if anything is wrong To know that something is wrong will cause her distress and this may well lead to even more health problems Before she leaves her doctor s office she has decided not to have a mammogram that is until her doctor points out that having a mammogram is a way to take care of herself so that she can continue to take care of her family In this way the decision to have a mammogram feels like a positive step Public health communicators and health professionals face dilemmas like this every day Speaking of Health looks at the challenges of delivering important messages to different audiences Using case studies in the areas of diabetes mammography and mass communication campaigns it examines the ways in which messages must be adapted to the unique informational needs of their audiences if they are to have any real impact Speaking of Health looks at basic theories of communication and behavior change and focuses on where they apply and where they don t By suggesting creative strategies and guidelines for speaking to diverse audiences now and in the future the Institute of Medicine seeks to take health communication into the 21st century In an age where we are inundated by multiple messages every day this book will be a critical tool for all who are interested in communicating with diverse communities about health issues Dealing with Disaster Sandra K. Schneider,2014-12-18 Now updated with examples through 2010 this classic study examines the disruptive effects of disasters on patterns of human behavior and the operations of government and the conditions under which even relatively minor crises can lead to system breakdown **The Therapeutic Cloning Debate** Eric A. Jensen,2016-03-03 Exploring the controversy surrounding therapeutic human cloning this book draws upon data collected from news articles and interviews with journalists to examine the role of mass media in shaping biomedical controversies With specific reference to the US and the UK as two leading scientific nations grappling with the global issue of therapeutic cloning together with attention to the important role played by nations in Southeast Asia this book sheds light on media

representations of scientific developments the unrealistic hype that can surround them the influence of religion and the potentially harmful imposition of journalistic and nationalist values on the scientific field Empirically grounded and theoretically innovative The Therapeutic Cloning Debate will appeal to social scientists across a range of disciplines with interests in science communication public engagement cultural and media studies science politics science journalism the sociology of expert knowledge and risk It will also appeal to scientists journalists policymakers and others interested in how news media frame science for the public *Fair Weather* Ferenc L. Tóth, 2019-07-23 Is a unique cross disciplinary assessment of fairness and equity issues in the context of global climate change a crucial dimension in current international negotiations written by a collection of leading scientists in economics sociology and social psychology ethics international law and political science How should responsibility for adapting to climate change be distributed Who should bear the costs of mitigating its impacts and how should these costs be measured Answers to these questions differ often according to the vulnerability wealth and level of industrial development of the country Finding a fair solution is controversial but crucial to the complex and vital negotiations over global warming This illuminating and accessible volume explores the policy dimensions and analytical needs of the negotiation process It is essential reading for policy makers and students and teachers of economics sociology and social psychology ethics international relations law and political science FERENC L TOTH is project leader at the Department of Global Change and Social Systems at the Potsdam Institute for Climate Impact Research PIK Germany CONTRIBUTORS H Asbjorn Aaheim Frank Biermann Samuel Fankhauser Carsten Helm Juliane Kokott Joanne Linnerooth Bayer Volker Linneweber Elizabeth L Malone Shuzo Nishioka Originally published in 1999 David W Pearce Steve Rayner P R Shukla Dominik Thieme Michael Thompson Richard S J Tol David G Victor **Hospital Epidemiology and Infection Control** C. Glen Mayhall, 2012-02-20 Thoroughly revised and updated for its Fourth Edition this highly acclaimed volume is the most comprehensive reference on hospital epidemiology and infection control Written by over 150 leading experts this new edition examines every type of hospital acquired nosocomial infection and addresses every issue relating to surveillance prevention and control of these infections in patients and in healthcare workers This new edition features new or significantly increased coverage of emerging infectious diseases avian influenza governmental regulation of infection control and payment practices related to hospital acquired infections molecular epidemiology the increasing prevalence of community acquired MRSA in healthcare facilities system wide infection control provisions for healthcare systems hospital infection control issues following natural disasters and antimicrobial stewardship in reducing the development of antimicrobial resistant organisms The Skeptical Environmentalist Bjørn Lomborg, 2001-08-30 The Skeptical Environmentalist challenges widely held beliefs that the environmental situation is getting worse and worse The author himself a former member of Greenpeace is critical of the way in which many environmental organisations make selective and misleading use of the scientific evidence Using the best available statistical information from internationally

recognised research institutes Bj rn Lomborg systematically examines a range of major environmental problems that feature prominently in headline news across the world His arguments are presented in non technical accessible language and are carefully backed up by over 2500 footnotes allowing readers to check sources for themselves Concluding that there are more reasons for optimism than pessimism Bj rn Lomborg stresses the need for clear headed prioritisation of resources to tackle real not imagined problems The Skeptical Environmentalist offers readers a non partisan stocktaking exercise that serves as a useful corrective to the more alarmist accounts favoured by campaign groups and the media

The Silicone Breast Implant Story Marsha L. Vanderford,David H. Smith,2013-11-05 This volume examines one health issue breast implants across a series of contexts often thought to be separate media coverage doctor patient interaction doctor doctor professional communication support group dialogues public relations campaigns and more In so doing it provides a narrative of how communication shapes the individual perceptions of health government and social policy concerning health care At the core of the silicone breast implant controversy is the need for people to act amid uncertainty about the health risks involved This need to weigh action in the midst of uncertain risk characterizes a large number of health issues The attempts of patients physicians drug manufacturers and others to seek and provide both information and influence makes communication central to these issues Consequently the questions explored in this volume will interest a diverse group of readers This audience includes plastic surgeons in particular physicians in general and anyone involved with women s health issues As the medical profession struggles with its identity amid changes in public attitudes government regulations and medical practices this volume s findings concerning media portrayals of doctors and medical devices become even more important Finally this study reveals how interrelated public information and private decisions are and how closely media and interpersonal relationships fit Tracing one medical issue across interpersonal organizational public relations and mediated forums has clearly demonstrated the multiple ways those communication channels overlap and inform one another

Routledge Handbook of Public Communication of Science and Technology Massimiano Bucchi,Brian Trench,2014-06-20 Communicating science and technology is a high priority of many research and policy institutions a concern of many other private and public bodies and an established subject of training and education Over the past few decades the field has developed and expanded significantly both in terms of professional practice and in terms of research and reflection The Routledge Handbook of Public Communication of Science and Technology provides a state of the art review of this fast growing and increasingly important area through an examination of the research on the main actors issues and arenas involved In this brand new revised edition the book brings the reviews up to date and deepens the analysis As well as substantial reworking of many chapters it gives more attention to digital media and the global aspects of science communication with the inclusion of four new chapters Several new contributors are added to leading mass communication scholars sociologists public relations practitioners science writers and others featured herein With key questions for further discussion highlighted in each chapter the

handbook is a student friendly resource and its scope and expert contributors mean it is also ideal for both practitioners and professionals working in the field Combining the perspectives of different disciplines and of different geographical and cultural contexts this original text provides an interdisciplinary and global approach to the public communication of science and technology It is a valuable resource for students researchers educators and professionals in media and journalism sociology the history of science and science and technology

It Ain't Necessarily So David Murray, Joel B. Schwartz, S. Robert Lichter, 2001 We all know the old adage You can't believe everything you read So why do we panic the minute The American Something or the Blah Blah Institute releases a new study proving that millions of Americans will die next year from inhalation of a gas none of us can even pronounce

Culture of Fear Frank Furedi, 2002-04-30 Fear has become an ever expanding part of life in the West in the twenty first century We live in terror of disease abuse stranger danger environmental devastation and terrorist onslaught We are bombarded with reports of new concerns for our safety and that of our children and urged to take greater precautions and seek more protection But compared to the past or to the developing world people in contemporary Western societies have much less familiarity with pain suffering debilitating disease and death We actually enjoy an unprecedented level of personal safety When confronted with events like the destruction of the World Trade Center fear for the future is inevitable But what happened on September 11th 2001 was in many ways an old fashioned act of terror representing the destructive side of human passions Frank Furedi argues that the greater danger in our culture is the tendency to fear achievements that represent a more constructive side of humanity We panic about genetically engineered food about genetic research about the health dangers of mobile phones The facts however often fail to support the scare stories about new or growing risks to our health and safety Instead it is our obsession with theoretical risks that is in danger of distracting us from dealing with the old fashioned dangers that have always threatened our lives

Dividing United Europe Aline Sierp, Christian Karner, 2020-06-29 Pictures of Angela Merkel in a Nazi uniform the burning of German flags newspaper articles portraying Southern Europe as work shy and Northern Europe as tight fisted The Eurozone crisis has thrown up old stereotypes often digging into well established historical images of the other The conscious or tacit use of national prejudices by politicians and parts of the media and the strong emotional reactions among European citizens have caused a lot of public concern about the likely negative implications of such reawakening of national clichés and the newly hardening boundaries they construct for the process of European integration It is evident that current and recent crises confront European citizens with profound dilemmas which they seek to make sense of and in response to which much new political mobilisation takes place At the same time some of the interpretative and political reactions thus generated also have the potential to become very destructive processes putting into question years of integration efforts This book brings together scholars who examine the nexus between economic crisis national identities and the use of historical images and prejudices and stereotypes by focusing particularly on media and political discourses in different European countries In

addition to detailed empirical discussions covering diverse national settings across Europe the different contributions discuss and offer a variety of conceptual and methodological approaches within the inter disciplinary study of national identities prejudice and stereotyping in the context of socio economic and political crises This book was originally published as a Special Issue of National Identities The Emerald Handbook of Digital Media in Greece Anastasia Veneti,Athina Karatzogianni,2020-10-22 The Emerald Handbook of Digital Media in Greece Journalism and Political Communication in Times of Crisis presents the empirical applications of digital media in political communication and in a number of social settings including the environment homelessness migration and social movements **Overblown** John E. Mueller,2006 Why have there been no terrorist attacks in the United States since 9 11 It is ridiculously easy for a single person with a bomb filled backpack or a single explosives laden automobile to launch an attack So why hasn t it happened The answer is surely not the Department of Homeland Security which cannot stop terrorists from entering the country legally or otherwise It is surely not the Iraq war which has stoked the hatred of Muslim extremists around the world and wasted many thousands of lives Terrorist attacks have been regular events for many years usually killing handfuls of people occasionally more than that Is it possible that there is a simple explanation for the peaceful American home front Is it possible that there are no al Qaeda terrorists here Is it possible that the war on terror has been a radical overreaction to a rare event Consider 80 000 Arab and Muslim immigrants have been subjected to fingerprinting and registration and more than 5 000 foreign nationals have been imprisoned yet there has not been a single conviction for a terrorist crime in America A handful of plots some deadly some intercepted have plagued Europe and elsewhere and even so the death toll has been modest Much probably most of the money and effort expended on counterterrorism since 2001 and before for that matter has been wasted The terrorism industry and its allies in the White House and Congress have preyed on our fears and caused enormous damage It is time to rethink the entire enterprise and spend much smaller amounts on only those things that do matter intelligence law enforcement and disruption of radical groups overseas Above all it is time to stop playing into the terrorists hands by fear mongering and helping spread terror its **Communicating in Risk, Crisis, and High Stress Situations:**

Journal of the National Cancer Institute ,1996 **Mass Mediated Disease** Debra E. Blakely,2007-06-07

Mass Mediated Disease focuses on the Spanish influenza pandemic of 1918 the Asian influenza pandemic of 1957 and the Hong Kong influenza pandemic of 1968 by discussing news stories reported by the New York Times London Times and other popular magazines This groundbreaking work demonstrates that the social construction of influenza changed over time which was reflected by the mass media and ultimately resulted in public policies that clearly illustrate the link between media and policy formation in the United States
