Open Compositionality Eduardo García-Ramírez, 2019-06-27 Open Compositionality Towards a New Methodology of Language argues that natural languages like English and Spanish are not only systems of representation useful for communication but also highly interactive cognitive capacities allowing humans to engage in complex forms of cognition This view goes against the orthodox approach within philosophy of language which considers natural languages to be specialized systems consisting of only linguistic elements and functioning in a closed compositional manner allowing for fully formal algebraic descriptions Eduardo García-Ramírez rejects the longstanding principle of compositionality according to which the meaning of any complex expression is fully determined by its parts and the way they are combined and he substitutes it with an alternative open and interactive one This novel view of the nature of language better accounts for the empirical evidence García-Ramírez develops an account of open compositionality accompanied by the cognition first methodology in which natural languages are conceived as supermodular cognitive capacities that allow for interaction among multiple distinct areas of human cognition The explanatory success of this original proposal and its accompanying methodology are tested by the author's account of three enduring philosophical problems substitution failure empty names and the nature of moral discourse

The Stylistics of Embodiment Anne Holm, 2025-01-22 This book presents a stylistic framework for analysing embodiment in lyric texts While the assumption that our minds are embodied underlies most approaches in cognitive stylistics and beyond a systematic account of the linguistic patterns through which the body may be manifested in poetic expression has not yet been provided Aiming to fill this gap the book focuses on contemporary lyric texts that prominently engage the senses in depicting past experiences Drawing its tools mainly from Cognitive Grammar and research on conceptual metaphors and iconicity the book investigates how sensory language gives rise to simulated embodied responses In doing so the book views poetic expression as a complex interplay of modalities and seeks to expand the concept of the lyric by incorporating digital poetry song lyrics performance poetry and lyrical prose among its case studies The book furthermore brings in current cognitive scientific research on the workings of memory to the analysis of sensory memory most centrally the psychological phenomenon of mental time travel It will be of interest to students and scholars working on stylistics literary studies and multimodal and intermedial studies

Early Childhood Mathematics Education Research Julie

Sarama, Douglas H. Clements, 2009-04-01 This important new book synthesizes relevant research on the learning of mathematics from birth into the primary grades from the full range of these complementary perspectives At the core of early math experts Julie Sarama and Douglas Clements's theoretical and empirical frameworks are learning trajectories detailed descriptions of children's thinking as they learn to achieve specific goals in a mathematical domain alongside a related set of instructional tasks designed to engender those mental processes and move children through a developmental progression of levels of thinking Rooted in basic issues of thinking learning and teaching this groundbreaking body of research illuminates foundational topics on the learning of mathematics with practical and theoretical implications for all ages Those implications are especially important in addressing equity concerns as understanding the level of thinking of the class and the individuals within it is key in serving the needs of all children **The Cambridge Handbook of Psycholinguistics** Michael

Spivey, Ken McRae, Marc Joanisse, 2012-08-20 Our ability to speak write understand speech and read is critical to our ability to function in today's society As such psycholinguistics or the study of how humans learn and use language is a central topic in cognitive science This comprehensive handbook is a collection of chapters written not by practitioners in the field who can summarize the work going on around them but by trailblazers from a wide array of subfields who have been shaping the field of psycholinguistics over the last decade Some topics discussed include how children learn language how average adults understand and produce language how language is represented in the brain how brain damaged individuals perform in terms of their language abilities and computer based models of language and meaning This is required reading for advanced researchers graduate students and upper level undergraduates who are interested in the recent developments and the future of psycholinguistics Montessori Angeline Stoll Lillard, 2008-08-12 One hundred years ago Maria Montessori the first

female physician in Italy devised a very different method of educating children based on her observations of how they naturally learn In Montessori Angeline Stoll Lillard shows that science has finally caught up with Maria Montessori Lillard presents the research behind eight insights that are foundations of Montessori education describing how each of these insights is applied in the Montessori classroom In reading this book parents and teachers alike will develop a clear understanding of what happens in a Montessori classroom and more important why it happens and why it works Lillard however does much more than explain the scientific basis for Montessori's system Amid the clamor for evidence based education she presents the studies that show how children learn best makes clear why many traditional practices come up short and describes an ingenious alternative that works Now with a foreword by Renilde Montessori the youngest grandchild of Maria Montessori Montessori offers a wealth of insights for anyone interested in education Trends in Cognitive Linguistics Javier Valenzuela, Ana Rojo, Cristina Soriano, 2009 The series Duisburg Papers on Research in Language and Culture presents a forum for linguistic research on the interrelationship between language and culture The series is interdisciplinary in nature and consists of monographs and collections of papers The main purpose of the editors is to initiate

a dialogue between linguistic science and neighboring disciplines such as sociology anthropology semiotics literary studies and intercultural communication

Natural-Theological Understanding from Childhood to Adulthood Olivera Petrovich,2018-09-13 It is commonly assumed that young children only begin to think about God as a result of some educational or cultural influence perhaps provided by their parents Natural Theological Understanding from Childhood to Adulthood asks if there is anything about God that children can know independently of any specific cultural input does their knowledge of God simply come from their everyday encounters with the surrounding world Whilst children s theoretical reasoning in biology physics and psychology has received considerable attention in recent developmental research the same could not be said about their religious or theological understanding Olivera Petrovich explores children s religious concepts from a natural theological perspective Using supporting evidence from a series of studies with children and adults living in as diverse cultures as the UK and Japan Petrovich explains how young children begin to construct their everyday scientific and metaphysical theories by relying on their own already advanced causal understanding The unique contribution that this volume makes to the developmental psychology of religion is its contention that religion or theology constitutes one of the core domains of human cognition rather than being a by product of other core domains and specific cultural inputs Natural Theological Understanding from Childhood to Adulthood is essential reading for students and researchers in cognitive developmental psychology religious studies education and cognitive anthropology

Mental Models across Languages Pawel Sickinger,2018-12-15 This book presents a study that triangulates the meanings of expressions across English German and Japanese via their perception based conceptual representations In an online experiment native speakers of the three languages were asked to design visual representations of expressions referring to baldness phenomena These sets of visualizations are used to determine conceptual overlap or distance between expressions in the three languages resulting in lexical conceptual maps for MALE BALDNESS The study is discussed against the background of an embodied perceptual symbol based understanding of linguistic meaning A section of the book further applies this perspective to the issue of translation developing a process model of translation based on the concept of cognitive equivalence The book presents a novel approach to lexical semantics from a cognitive linguistic perspective tested through a methodologically innovative experiment It is a compelling read to scholars in cognitive semantics contrastive semantics embodied cognition and cognitive translation studies

Stress, Trauma, and Children's Memory Development Mark L. Howe,Gail S. Goodman,Dante Cicchetti,2008 Few questions in psychology have generated as much debate as those concerning the impact of childhood trauma on memory A lack of

scientific research to constrain theory has helped fuel arguments about whether childhood trauma leads to deficits that result in conditions such as false memory or lost memory and whether neurohormonal changes that are correlated with childhood trauma can be associated with changes in memory Scientists have also struggled with more theoretical concerns such as how to conceptualize and measure distress and other negative emotions in terms of for example discrete emotions physiological response and observer ratings To answer these questions Mark L Howe Gail Goodman and Dante Cicchetti have brought together the most current and innovative neurobiological cognitive clinical and legal research on stress and memory development This research examines the effects of early stressful and traumatic experiences on the development of memory in childhood and elucidates how early trauma is related to other measures of cognitive and clinical functioning in childhood It also goes beyond childhood to both explore the long term impact of stressful and traumatic experiences on the entire course of normal memory development and determine the longevity of trauma memories that are formed early in life Stress Trauma and Children s Memory Development will be a valuable resource for anyone interested in early experience childhood trauma and memory research

From Perception to Meaning Beate Hampe, 2008-08-22 The 1987 landmark publications by G Lakoff and M Johnson made image schema one of the cornerstone concepts of the emerging experientialist paradigm of Cognitive Linguistics a framework founded upon the rejection of the mind body dichotomy and stressing the fundamentally embodied nature of meaning imagination and reason hence language Conceived of as the pre linguistic dynamic and highly schematic gestalts arising directly from motor movement object manipulation and perceptual interaction image schemas served to anchor abstract reasoning and imagination to sensori motor patterns in the conceptual theory of metaphor Being itself informed by preceding crosslinguistic work on semantic primitives in the linguistic representations of spatial relations carried out by L Talmy R Langacker and others the notion has inspired a large amount of subsequent research and debate on diverse issues ranging from the meaning structure and acquisition of natural languages to the embodied mind itself From Perception to Meaning is the first survey of current image schema theory and offers a collection of original and innovative essays by leading scholars many of whom have shaped the theory from the very beginning The edition unites essays on major issues in recent research on image schemas from aspects of their definition and linguistic formalization their psychological status and neural grounding to their role as semantic universals and primitives in language acquisition The book will thus not only be welcomed by linguists of a cognitive orientation but will prove relevant to philosophers psychologists and anthropologists

interested in language and indeed to anyone studying the embodied mind **Methods in Cognitive Linguistics** Monica Gonzalez-Marquez, 2007 *Methods in Cognitive Linguistics* is an introduction to empirical methodology for language researchers. Intended as a handbook to exploring the empirical dimension of the theoretical questions raised by Cognitive Linguistics, the volume presents guidelines for employing methods from a variety of intersecting disciplines, laying out different ways of gathering empirical evidence. The book is divided into five sections. *Methods and Motivations* provides the reader with the preliminary background in scientific methodology and statistics. The sections on *Corpus and Discourse Analysis* and *Sign Language and Gesture* describe different ways of investigating usage data. *Behavioral Research* describes methods for exploring mental representation, simulation, semantics, child language development, and the relationships between space and language and eye movements and cognition. Lastly, *Neural Approaches* introduces the reader to ERP research and to the computational modeling of language.
