Reproductive Biology Of The Chelonia:

The Reproductive Biology of the Chelonia Gerald Kuchling, 2012-12-06 This book presents a comparative view of chelonian reproduction and discusses ecophysiological implications for their captive breeding Chelonians with their protective rigid armour are a phylogenetically antique group of reptiles which radiated to occupy niches from the open waters of the oceans to rivers creeks swamps forests savannahs and deserts A few North American turtle species have been well studied but until recently reproductive data on other chelonian species have been scarce The way in which chelonians adjust their conservative mode of reproduction to the various requirements of their habitats and life styles is the theme of this book the physiology of reproduction and its interplay with ecological conditions are its central subjects

Reproductive Biology of Captive Green Sea Turtle Chelonia Mydas James R. Wood, 1980 A captive colony of green sea turtles *Chelonia mydas* has been maintained and observed at a commercial sea turtle farm on Grand Cayman Island B W I since 1973 Observations of this breeding colony show that the mating and nesting behaviour of the captive green sea turtle is similar to that observed in wild populations Evidence indicates that mating observed prior to a female's nesting in a given season determines the hatchability of that season's egg production Annual per female egg production of the captive colony appears to be two to five times greater than that reported for wild colonies Observations on the reproductive biology of green sea turtles hatched and raised under farm conditions suggests that the minimum age of sexual maturity is eight to nine years of age The number of eggs per nest the number of nests per season per female and hatch rate tend to increase with successive seasons nesting for these turtles reaching sexual maturity **Chelonian Conservation and Biology**, 2003

Hormones and Reproduction of Vertebrates, Volume 3 David O. Norris, Kristin H. Lopez, 2011-05-04 This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals It is designed to provide a readable coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and our understanding of reproductive events Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group respectively the volumes are prepared so as to provide a thorough topical treatment across the vertebrates Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature and a comprehensive glossary of these terms and their alternative names is provided A complete essential and up to date reference for research scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research Covers the endocrinology neuroendocrinology physiology behaviour and anatomy of vertebrate reproduction Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects similarities and differences between them

Hormones and Reproduction of Vertebrates David O. Norris, Kristin H. Lopez, 2010-11-25 This series of volumes

represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals. It is designed to provide a readable coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and our understanding of reproductive events. Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group respectively, the volumes are prepared so as to provide a thorough topical treatment across the vertebrates. Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature and a comprehensive glossary of these terms and their alternative names is provided. A complete essential and up to date reference for research scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research. Covers the endocrinology, neuroendocrinology, physiology, behaviour and anatomy of vertebrate reproduction. Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all. Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects, similarities and differences between them.

Reptile Ecology and Conservation C. Kenneth Dodd, 2016. This practical handbook of reptile field ecology and conservation brings together a distinguished international group of reptile researchers to provide a state of the art review of the many new and exciting techniques used to study reptiles. The authors describe ecological sampling techniques and how they are implemented to monitor the conservation status and population trends of snakes, lizards, tuatara, turtles and crocodilians throughout the world. Emphasis is placed on the extent of statistical inference and the biases associated with different techniques and analyses. The chapters focus on the application of field research and data analysis for achieving an understanding of reptile life history, population dynamics, movement patterns, thermal ecology, conservation status and the relationship between reptiles and their environment. The book emphasises the need for thorough planning and demonstrates how a multi-dimensional approach incorporates information related to morphology, genetics, molecular biology, epidemiology, statistical modelling, animal welfare and biosecurity. Although accentuating field sampling, sections on experimental applications in laboratories and zoos, thermal ecology, genetics, landscape ecology, disease and biosecurity and management options are included. Much of this information is scattered in the scientific literature or not readily available and the intention is to provide an affordable comprehensive synthesis for use by graduate students, researchers and practising conservationists worldwide.

Biological Report, 1984 NOAA Technical Report NMFS, 1984 **Reptile Biodiversity** Roy W. McDiarmid, 2012-01-10. Authoritative and comprehensive, provides an up to date description of the tool box of methods for inventorying and monitoring the diverse spectrum of reptiles. All biodiversity scientists will want to have it during project planning and as study progresses. A must for field biologists, conservation planners and biodiversity managers. Jay M. Savage, San Diego State University. Kudos to the editors and contributors to this book. From the perspective of a non-ecologist such as myself, who only occasionally needs to intensively sample a particular site or habitat, the quality and clarity of this book has
