Rescuing Reason R. Nola, 2012-12-06 Do knowledge and science arise from the application of canons of rationality and scientific method Or is all our scientific knowledge caused by socio political factors or by our interests in the socio political the view of sociologists of knowledge Or does it result from interplay of relations of power the view of Michel Foucault Or does our knowledge arise from the will to power the view of Nietzsche This volume sets out to critically examine the theses of those who would debunk the idea of rational explanation The book is wide ranging The theories of method of Quine Kuhn Feyerabend amongst others are discussed and related to the views of Marx Foucault Wittgenstein and Nietzsche as well as sociologists of science such as Mannheim and Bloor The author provides a wide interpretative framework which links the doctrines espoused by many of these authors it is argued that they inherit many of the difficulties in the Strong Programme in the sociology of knowledge and that they fail to reconcile the normativity of knowledge with their naturalism It is argued that neither relativists sceptics nihilists sociologists of knowledge nor the postmodernists successfully debunk the claims of rational explanation far from it these theorists presuppose much of the theory of methodology they deny *Rescuing Reason*

Mechanics and Natural Philosophy before the Scientific Revolution Walter Roy Laird, Sophie Roux, 2008-01-01. Modern mechanics was forged in the seventeenth century from materials inherited from Antiquity and transformed in the period from the Middle Ages through to the sixteenth century. These materials were transmitted through a number of textual traditions and within several disciplines and practices including ancient and medieval natural philosophy statics the theory and design of machines and mathematics. This volume deals with a variety of moments in the history of mechanics when conflicts arose within one textual tradition between different traditions or between textual traditions and the wider world of practice. Its purpose is to show how the accommodations sometimes made in the course of these conflicts ultimately contributed to the emergence of modern mechanics. The first part of the volume is concerned with ancient mechanics and its transformations in the Middle Ages the second part with the reappropriation of ancient mechanics and especially with the reception of the Pseudo Aristotelian Mechanica in the Renaissance and the third and final part with early modern mechanics in specific social national and institutional contexts.

Rethinking Scientific Change and Theory Comparison: Léna Soler, H. Sankey, Paul Hoyningen-Huene, 2008-05-29. L. NA SOLER. This volume is a collection of essays devoted to the analysis of scientific change and stability. It represents the most recent thinking on the topic of incommensurability and scientific theory change. It explores the balance and tension that exists between commensurability and continuity on the one hand and incommensurability and discontinuity or ruptures on the other. And it discusses some central epistemological consequences regarding the nature of scientific progress rationality and realism. With respect to these topics it investigates a number of new avenues and revisits some familiar issues with a focus on the history and philosophy of physics in a way that is informed by developments in cognitive sciences as well as the claims of New experimentalists. The essays in this book are fully revised versions of papers which were originally presented at the international colloquium *Représentation comparative des théories scientifiques stabilité ruptures incommensurabilité* organized by Léna Soler and Paul Hoyningen-Huene at the University of Nancy France in June 2004. Each paper is followed by a critical comment which either represents an opposing viewpoint or suggests some developments. The conference was a striking example of the sort of genuine dialogue that can take place between philosophers of science historians of science

and scientists who come from different traditions and endorse opposing commitments I hope that this is evident in the book too and that it will constitute one of its attractions

The Reception of the Galilean Science of

Motion in Seventeenth-Century Europe Carla Rita Palmerino, J.M.M.H. Thijssen, 2004-08-31 This book collects contributions by some of the leading scholars working on seventeenth century mechanics and the mechanical philosophy Together the articles provide a broad and accurate picture of the fortune of Galileo's theory of motion in Europe and of the various physical mathematical and ontological arguments that were used in favour and against it Were Galileo's contemporaries really aware of what Westfall has described as the incompatibility between the demands of mathematical mechanics and the needs of mechanical philosophy To what extent did Galileo's silence concerning the cause of free fall impede the acceptance of his theory of motion Which methods were used before the invention of the infinitesimal calculus to check the validity of Galileo's laws of free fall and of parabolic motion And what sort of experiments were invoked in favour or against these laws These and related questions are addressed in this volume

Bulgarian Studies in the Philosophy of Science D. Ginev, 2013-06-29 This volume attempts to provide a new articulation of issues surrounding scientific realism scientific rationality the epistemology of non classical physics the type of revolutionary changes in the development of science the naturalization of epistemology within frameworks of cognitive science and structural linguistics models of the information technology revolution and reconstructions of early modern logical systems

Observation and Experiment in the Natural and Social Sciences Maria Carla Galavotti, 2006-04-18 According to a long tradition in philosophy of science a clear cut distinction can be traced between a context of discovery and a context of justification This tradition dates back to the birth of the discipline in connection with the Circles of Vienna and Berlin in the twenties and thirties of last century

Convicted that only the context of justification is pertinent to philosophy of science logical empiricists identified its goal with the rational reconstruction of scientific knowledge taken as the clarification of the logical structure of science through an analysis of its language and methods Stressing justification as the proper field of application of philosophy of science logical

empiricists intended to leave discovery out of its remit The context of discovery was then discarded from philosophy of science and left to sociology psychology and history The distinction between context of discovery and context of justification goes hand in hand with the tenet that the theoretical side of science can and should be kept separate from its observational and experimental components Further the final abstract formulation of theories should be analysed apart from the process behind it resulting from a tangle of context dependent factors This conviction is reflected by the distinction between theoretical and observational sentences underpinning the Hempelian view of theories as nets whose knots represent theoretical terms floating on the plane of observation to which it is anchored by rules of interpretation

Scientific Values and Civic Virtues Noretta Koertge, 2005-08-04 This volume of contributed essays a follow up to Noretta Koertge's successful book on the science wars *A House Built on Sand* takes an affirming positive view of the relationship between the values embodied in science and the nature of a civil society It argues that recent attacks on the probity of science undermine the possibility of rational discourse in the political arena While science has traditionally been viewed as incorporating intellectual virtues like honesty and precision of language the contributors to this volume point to additional benefits examining the idea that science can serve as a source of and inspiration for civic virtues in the need to be well informed about the way the world works in tolerating the viewpoints of others and in functioning as a fully global enterprise dedicated to the public good The contributors who include philosophers political scientists physicists biologists and engineers look at examples of scientific virtues in action and how they might be used as inspirations and practical resources for improving civic society The volume will appeal to a similarly broad audience interested in the relationship between science and society

Conceptual Analysis and Philosophical Naturalism David Braddon-Mitchell, Robert Nola, 2009 This volume shows how the so called Canberra Plan of metaphysical research continues to inspire and provoke some of the most interesting work in modern metaphysics

Rethinking Explanation Johannes Persson, Petri Ylikoski, 2007-05-16 This volume is a product of the international research project Theory of Explanation which was funded by the Joint Committee for Nordic Research Councils for the Humanities and the Social Sciences NOS HS The project started in 2001 and operated for a period of three years by organizing a number of workshops on scientific explanation in Norway Iceland Sweden and Finland The workshops included presentations by people involved in the project and by invited guests Both groups are represented in this volume which brings together some of the papers presented in these meetings The central theme of the research project was scientific explanation but it was approached from many different angles This plurality of approaches is also visible in the present volume The authors share a joint interest in explanation but not the same theoretical or methodological assumptions As a whole this volume shows that although the theory of explanation has been a major industry within philosophy of science there are still both conceptual problems to be solved and fresh philosophical ideas to explore The papers in this volume have been divided into two broad groups Part 1 consists of papers dealing with general issues in the theory of explanation while the

papers in Part 2 focus on some more specific problems Part 1 Theory of Explanation
