Southern Region,2004      **Manti-La Sal National Forest (N.F.), Lake Project** ,2006      Software for Calculating Vegetation Disturbance and Recovery by Using the Equivalent Clearcut Area Model Alan A. Ager,2005 The use of cumulative watershed effects models is mandated as part of interagency consultation over projects that might affect habitat for salmonids federally listed as threatened or endangered Cumulative effects analysis is also required by a number of national forest plans in the Pacific Northwest Region Region 6 Cumulative watershed effects in many cases are measured with the equivalent clearcut area ECA model which generates an index of cumulative disturbance by considering disturbance type extent and recovery over time Although the model has many limitations it provides an index of vegetative disturbance that can be used to compare the existing condition of different watersheds and the potential impacts among land management alternatives Calculating ECA on multiple watersheds and management scenarios for project level analysis is a tedious process We automated the process with a program called Equivalent Treatment Area Calculator to streamline its application on national forests in the Blue Mountains of eastern Oregon The program operation and limitations of the ECA model are described in this paper      *Black Hills National Forest (N.F.), Telegraph Project Area, Lawrence and Pennington Counties* ,2009

*Integrated Watershed Management* H. M. Gregersen,Peter F. Ffolliott,Kenneth N. Brooks,2007 As human populations expand and demands upon natural resources increase the need to manage the environments in which people live becomes more important but also more difficult Land and water management is especially critical as the use of upstream watersheds can drastically affect large numbers of people living in downstream watersheds An integrated approach that stresses both the importance of participatory planning and the institutional and technical constraints and opportunities is therefore necessary The institutional and technical context for managing watersheds and river basins including the involvement of both

the public and private sectors is also examined      A Century of Forest and Wildland Watershed Lessons George G. Ice, John D. Stednick, 2004      Tools in Fluvial Geomorphology G. Mathias Kondolf, Hervé Piégay, 2016-06-13

Fluvial Geomorphology studies the biophysical processes acting in rivers and the sediment patterns and landforms resulting from them. It is a discipline of synthesis with roots in geology, geography and river engineering and with strong interactions with allied fields such as ecology, engineering and landscape architecture. This book comprehensively reviews tools used in fluvial geomorphology at a level suitable to guide the selection of research methods for a given question. Presenting an integrated approach to the interdisciplinary nature of the subject, it provides guidance for researchers and professionals on the tools available to answer questions on river restoration and management. Thoroughly updated since the first edition in 2003 by experts in their subfields, the book presents state of the art tools that have revolutionized fluvial geomorphology in recent decades such as physical and numerical modelling, remote sensing and GIS, new field techniques, advances in dating, tracking and sourcing, statistical approaches as well as more traditional methods such as the systems framework, stratigraphic analysis, form and flow characterisation and historical analysis. This book covers five main types of geomorphological questions and their associated tools: historical framework, spatial framework, chemical, physical and biological methods, analysis of processes and forms, and future understanding framework. Provides guidance on advantages and limitations of different tools for different applications, data sources, equipment and supplies needed, and case studies illustrating their application in an integrated perspective. It is an essential resource for researchers and professional geomorphologists, hydrologists, geologists, engineers, planners and ecologists concerned with river management, conservation and restoration. It is a useful supplementary textbook for upper level undergraduate and graduate courses in Geography, Geology, Environmental Science, Civil and Environmental Engineering and interdisciplinary courses in river management and restoration.      Appendices, 2004
