Advances in the Sociology of Trust and Cooperation Vincent Buskens, Rense Corten, Chris Snijders, 2020-10-26 The problem of cooperation is one of the core issues in sociology and social science more in general The key question is how humans groups organizations institutions and countries can avoid or overcome the collective good dilemmas that could lead to a Hobbesian war of all against all The chapters in this book provide state of the art

examples of research on this crucial topic These include theoretical laboratory and field studies on trust and cooperation thereby approaching the issue in three complementary and synergetic ways The theoretical work covers articles on trust and control reputation formation and paradigmatic articles on the benefits and caveats of abstracting reality into models The laboratory studies test the implications of different models of trust and reputation such as the effects of social and institutional embeddedness and the potentially emerging inequalities this may cause The field studies test these implications in applied settings such as business purchasing and supply informal care and different kinds of collaboration networks This book is exemplary for rigorous social science The focus is on effects of social conditions in particular different forms of social and institutional embeddedness on social outcomes at the macro level Modelling efforts are applied to connect social conditions to social outcomes through micro level behavior in ways that are easily overlooked when argumentation is intuitive and impressionistic The book sets forth a mixed method approach by applying different empirical methods to test hypotheses about similar questions Several contributions re evaluate the theoretical strengths and weaknesses following from the laboratory and field studies Improving the theory in light of these findings facilitates pushing the boundaries of social science

imagining the very idea of a host society as modern secular and enlightened Starting from debates in social theory on social imaginaries and drawing on public debates on citizenship secularism and sexuality and on the social science of measuring immigrant integration this book presents a highly original study of immigrant integration that challenges our understanding of the concept of society Work, Organisation and Labour in Dutch Society G.H. Social Capital Dario Castiglione,Jan W. van Deth,Guglielmo Wolleb,2008-04-17 Social capital is a relatively new concept in the social sciences In the last twenty or so years it has come to indicate that networks of social relationships represent a

resource for both the individual and society since they provide support for the individual and facilitate collective action. Although this is not an entirely new idea, the more systematic way in which social capital captures such an intuition has created a new theoretical paradigm and helped to develop a series of innovative research programmes in politics, economics, and the study of human well-being. The concept has gained currency beyond academia, extending its influence to political and policy-making circles at local, national, and international levels. It has also affected the way in which social surveys are conceived and public policies assessed. As the idea of social capital has spread, the literature about it has increased exponentially. After twenty years of rapid expansion, it is time for a more considered and critical assessment of how the original concept has been adapted and refined and how successful its application has been. The *Handbook of Social Capital* intends to do precisely that. It offers a state-of-the-art view of discussions about the concept of social capital and the way in which it has been applied in empirical research. The organization of the Handbook reflects this intention by focusing on conceptual development and analysis in the first part, by identifying two main areas of research in which social capital has favoured the development of new and influential research programmes: political participation in democratic societies and economic development, and by exploring the more normative and policy-oriented consequences of social capital. All chapters comprising the volume were specifically written for the Handbook by some of the main experts in the fields. The book provides an authoritative and innovative introduction to the study of social capital.

The Oxford Handbook of Clinical Geropsychology Nancy A. Pachana, Ken Laidlaw, 2014. The *Oxford Handbook of Clinical Geropsychology* is a landmark publication in this field, providing broad and authoritative coverage of the research and practice issues in the field today, as well as innovations expanding the field's horizons. It includes chapters from the foremost scholars in clinical geropsychology from around the world.

Trust Under Pressure Katinka Bijlsma-Frankema, Rosalinde Klein Woolthuis, 2005-01-01. This book challenges the current thinking on trust, largely based on studies in stable contexts, by presenting new empirical studies of trust and trust building in a number of less stable, less institutionalized settings. These contexts are gaining in prominence given the globalization and virtualization of organizational relations, development of high-velocity markets, and the growing importance of intangible resources.

The Many Faces of Individualism A. W. Musschenga, 2001. Arguments about the definition, the moral, and social significance of the concepts of individualism and individualisation are addressed in this collection of essays.

Longitudinal Models in the Behavioral and Related Sciences Kees van Montfort, Johan Oud, Albert Satorra, 2017-09-29. This volume reviews longitudinal models and analysis procedures for use in the behavioral and social sciences. Written by distinguished experts in the field, the book presents the most current approaches and theories and the technical problems that may be encountered along the way. Readers will find new ideas about the use of longitudinal analysis in solving problems that arise due to the specific nature of the research design and the data available. *Longitudinal Models in the Behavioral and Related Sciences* opens with the latest theoretical developments. In particular, the book

addresses situations that arise due to the categorical nature of the data issues related to state space modeling and potential problems that may arise from network analysis and or growth curve data The focus of part two is on the application of longitudinal modeling in a variety of disciplines The book features applications such as heterogeneity on the patterns of a firm's profit on house prices and on delinquent behavior non linearity in growth in assessing cognitive aging measurement error issues in longitudinal research and distance association for the analysis of change Part two clearly demonstrates the caution that should be taken when applying longitudinal modeling as well as in the interpretation of the results This new volume is ideal for advanced students and researchers in psychology sociology education economics management medicine and neuroscience
