Research Priorities For Conservation Biology Critical Issues Series:

Research Priorities for Conservation Biology Society for Conservation Biology, 1989 Research Priorities for Conservation Biology proposes an urgent research agenda to improve our understanding and preservation of biological diversity The book discusses ecosystems conservation ecology of communities population ecology and viability reproduction propagation and release fragmentation ethnobiology and genetic resources training in the developing world *Papua New Guinea Conservation Needs Assessment*, 1993 Endangered Species Recovery Tim Clark, Richard Reading, Alice Clarke, 1994-10 Endangered Species Recovery presents case studies of prominent species recovery programs in an attempt to explore and analyze their successes failures and problems and to begin to find ways of improving the process It is the first effort to engage social scientists as well as biologists in a wide ranging analysis and discussion of endangered species conservation and provides valuable insight into the policy and implementation framework of species recovery programs The book features a unique integration of case studies with theory and provides sound practical ideas for improving endangered species policy implementation **Environmental Restoration** John Berger, 2012-06-22 Environmental Restoration is the product of a ground breaking conference on ecological restoration held in January 1988 at the University of California Berkeley It offers an overview from the nation s leading experts of the most current techniques of restoration including examples of the complex and subtle biological interactions we must understand to ensure success Chapters cover restoration of agricultural lands barrens coastal ecosystems prairies and range lands Additional sections address temperate forests and watersheds mined lands soil bioengineering urban issues including waste treatment and solid toxic and radioactive waste management The book also covers restoration of aquatic systems includes chapters on strategic planning and land acquisition and provides examples of successful projects *General Program, Annual AIBS Meeting of Biological Societies* American Institute of Biological Sciences, 1988 Environment Abstracts Annual, 1990 This database encompasses all aspects of the impact of people and technology on the environment and the effectiveness of remedial policies and technologies featuring more than 950 journals published in the U S and abroad The database also covers conference papers and proceedings special reports from international agencies non governmental organizations universities associations and private corporations Other materials selectively indexed include significant monographs government studies and newsletters **Ecology and Sustainability of Southern Temperate Ecosystems** Tony Norton, 1994 Can conservation and development goals be reconciled as suggested by the popular notion of sustainable development Ecology and Sustainability of Southern Temperate Ecosystems explores this proposition and related questions of science and management focusing on Australia s southern temperate forest ecosystems The impacts of wood harvesting roading exotic species and other disturbance factors on forest species communities habitats and ecosystems are surveyed in various chapters Despite countless debates inquiries and management changes the long term maintenance of ecological values in native forests used for wood production remains

uncertain The contributions in this volume demonstrate that finer resolutions of management of production forests are demanded This in turn will require balancing increased levels of long term research and monitoring with better abilities to make decisions in the face of uncertainty However the capacity of existing policy processes and management regimes to fulfil these demands can be questioned and the role of ecology and ecologists in informing decision making given greater consideration BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved

Biodiversity and Environmental Philosophy Sahotra

Sarkar,2005-09-19 This book explores the epistemological and ethical issues at the foundations of environmental philosophy emphasising the conservation of biodiversity Sahota Sarkar criticises attempts to attribute intrinsic value to nature and defends an anthropocentric position on biodiversity conservation based on an untraditional concept of transformative value Unlike other studies in the field of environmental philosophy this book is as much concerned with epistemological issues as

with environmental ethics It covers a broad range of topics including problems of explanation and prediction in traditional ecology and how individual based models and Geographic Information Systems GIS technology is transforming ecology Introducing a brief history of conservation biology Sarkar analyses the consensus framework for conservation planning through adaptive management He concludes with a discussion of directions for theoretical research in conservation biology and environmental philosophy

Biological Diversity/prospects and Problems United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Natural Resources, Agriculture Research, and Environment, 1988

Conserving Bird Biodiversity Ken Norris, Deborah J. Pain, 2002-06-06 The earth's biodiversity currently faces an extinction crisis that is unprecedented Conservationists attempt to intervene in the extinction process either locally by protecting or restoring important species and habitats or at national and international levels by influencing key policies and promoting debate Reliable information is the foundation upon which these efforts are based which places research at the heart of biodiversity conservation The role of research in such conservation is diverse It includes understanding why biodiversity is important defining units of biodiversity priority setting for species and sites managing endangered and declining populations understanding large scale processes making predictions about the future and interfacing with training education public awareness and policy initiatives Using examples from a wide range of bird conservation work worldwide researchers consider the principles underlying these issues and illustrate how these principles have been applied to address actual conservation problems for students practitioners and researchers in conservation biology
