

SCIENCE LESSON PLAN: BRIDGE

NAME: _____

DATE: _____

OBJECTIVE

Students will work together to build a freestanding (not connected to anything for stability and without piers/support structures along the span) bridge that is at least -- cm. long. [Distance can be determined based on the materials being used and the age/grade of the students.]

TESTING

Each group of students should describe their bridge design elements to the class and demonstrate that it is able to stand freely for a specific period of time. You can use blocks or books to create the space that must be crossed or you can use two desks that are a specific distance apart.

Note: Since some bridges are likely to fall apart if a load competition is held, it is recommended that photographs are taken of each of the bridges, from a variety of angles.

MATERIALS

Be creative- choose supplies that are available to you and should be limited on budget. Popular materials for bridge building challenges are:

- Spaghetti noodles and marshmallows
- Newspaper and tape
- Cardboard and tape
- Toothpicks and gumdrops
- Popsicle sticks and glue
- Straws
- Other supplies that can be available include: scissors, meter stick

REFLECTION

- Did your team build the bridge that was on the original design sheet? If no, what did you need to change?
- Which elements of your final design worked well?
- List materials or tools that you wish you would have had to make the bridge building process more successful.
- If you could change anything that your team did when responding to the challenge it would be: What was the best part of the bridge challenge?

Disciplinary Intuitions and the Design of Learning Environments Kenneth Y. T. Lim,2014-10-19 As children we would have spilt glasses of milk dropped things and broken things As children therefore we would have developed intuitions about how the world works but we would not necessarily have been able to explain these workings It would only have been till we entered formal schooling that we would have learned codifications of canon within each respective discipline and consequently how to articulate the canon to explain the intuition The preceding example was from the natural sciences but one could just have easily taken an example from say the environmental sciences or from the social sciences Indeed much of this book does just that as it seeks to chart the territory of a new theory of learning around *Disciplinary Intuitions* Many of the chapters within draw frequent and explicit linkages to curriculum design from the premise of the need to go beyond addressing the conceptions of learners to seeking to understand the substrate upon which these conceptions are founded The argument is made that this substrate comprises the particular set of lived experiences of each learner and how because these lived experiences are as tacit as they are diverse designing curriculum around misconceptions and preconceptions alone would not lead to enduring understanding from first principles From this perspective *Disciplinary Intuitions* constitute an

exciting field at the nexus of learning theories and curriculum design *Starting Small* Lauren Madden, 2025-04-01 Many teachers leverage their assets to adopt changes using small but meaningful changes that go beyond box checking and encourage authentic learning and engagement This book celebrates teachers small steps by sharing examples of these excellent small changes
