Realism And The Aim Of Science:

Realism and the Aim of Science Karl Popper, 2013-04-15 *Realism and the Aim of Science* is one of the three volumes of Karl Popper's *Postscript to the Logic of Scientific Discovery*. The *Postscript* is the culmination of Popper's work in the philosophy of physics and a new famous attack on subjectivist approaches to philosophy of science. *Realism and the Aim of Science* is the first volume of the *Postscript*. Popper here formulates and explains his non-justificationist theory of knowledge: science aims at true explanatory theories yet it can never prove or justify any theory to be true, not even if it is a true theory. Science must continue to question and criticise all its theories, even those that happen to be true. *Realism and the Aim of Science* presents Popper's mature statement on scientific knowledge and offers important insights into his thinking on problems of method within science.

Realism and Anti-Realism in the Philosophy of Science Robert S. Cohen, Risto Hilpinen, Ren-Zong Qiu, 1996-10-31 Beijing International Conference 1992
[Scientific Realism and the Rationality of Science](#) Howard Sankey, 2016-04-01 Scientific realism is the position that the aim of science is to advance on truth and increase knowledge about observable and unobservable aspects of the mind-independent world which we inhabit. This book articulates and defends that position. In presenting a clear formulation and addressing the major arguments for scientific realism, Sankey appeals to philosophers beyond the community of typically Anglo-American analytic philosophers of science to appreciate and understand the doctrine. The book emphasizes the epistemological aspects of scientific realism and contains an original solution to the problem of induction that rests on an appeal to the principle of uniformity of nature.

Relativism and Realism in Science R. Nola, 2012-12-06 The institutionalization of History and Philosophy of Science as a distinct field of scholarly endeavour began comparatively early though not always under that name in the Australasian region. An initial lecturing appointment was made at the University of Melbourne immediately after the Second World War in

1946 and other appointments followed as the subject underwent an expansion during the 1950s and 1960s similar to that which took place in other parts of the world Today there are major Departments at the University of Melbourne the University of New South Wales and the University of Wollongong and smaller groups active in many other parts of Australia and in New Zealand Australasian Studies in History and Philosophy of Science aims to provide a distinctive publication outlet for Australian and New Zealand scholars working in the general area of history philosophy and social studies of science Each volume comprises a group of essays on a connected theme edited by an Australian or a New Zealander with special expertise in that particular area Papers address general issues however rather than local ones parochial topics are avoided Further more though in each volume a majority of the contributors is from Australia or New Zealand contributions from elsewhere are by no means ruled out Quite the reverse in fact they are actively encouraged wherever appropriate to the balance of the volume in question

Essays on Realism and Rationalism Alan Musgrave, 2023-07-10 The book's essays represent an important contribution to the contemporary philosophical debate concerning Realism and Rationalism The author defends in a clear and consistent fashion a fallibilist realistic and rationalist position in opposition to the idealistic and relativistic viewpoint characteristic of present postmodern philosophy

New Approaches to Scientific Realism Wenceslao J. Gonzalez, 2020-08-24 Scientific realism is at the core of the contemporary philosophical debate on science This book analyzes new versions of scientific realism It makes explicit the advantages of scientific realism over alternatives and antagonists contributes to deciding which of the new approaches better meets the descriptive and the prescriptive criteria and expands the philosophico methodological field to take in new topics and disciplines

The Problem of Realism Michele Marsonet, 2018-01-18 This title was first published in 2003 This book explores the problem of realism both metaphysical and scientific Renowned specialists in the field including Michael Devitt David Papineau Mark Sainsbury and Wesley Salmon contribute new essays that shed new light on the main topics in the current realism antirealism debate Discussing a wide range of issues related to realism both in metaphysics and in the philosophy of science they address more specific questions including those concerning metaphysical realism scientific realism the relations between epistemology and ontology causation dispositions and personal identity and the relations between science and common sense Presenting a comprehensive overview of the problem of realism as well as in depth discussion of particular topics this book offers valuable insights for both students and researchers in the field It can also be used in undergraduate and graduate courses of philosophy

After Popper, Kuhn and Feyerabend R. Nola, H. Sankey, 2012-12-06 Some think that issues to do with scientific method are last century's stale debate Popper was an advocate of methodology but Kuhn Feyerabend and others are alleged to have brought the debate about its status to an end The papers in this volume show that issues in methodology are still very much alive Some of the papers reinvestigate issues in the debate over methodology while others set out new ways in which the debate has developed in the last decade The book will be of interest to philosophers and scientists alike in the

reassessment it provides of earlier debates about method and current directions of research

Realism and Psychological Science David J. F. Maree, 2020-06-02 The book provides an argument why realism is a viable metatheoretical framework for psychological science By looking at some variations of realism such as scientific realism critical realism situational realism and Ferraris new realism a realist view of science is outlined that can feature as a metatheory for psychological science Realism is a necessary correction for the mythical image of science responsible for and maintained by a number of dichotomies and polarities in psychology Thus the quantitative qualitative dichotomy scientist practitioner polarity and positivist constructionist opposition feed off and maintains a mythic image of science on levels of practice methods and metatheory Realism makes a clear distinction between ontology and epistemic access to reality the latter which easily fits with softer versions of constructionism and the former which grounds science in resistance and possibility loosely translated as criticism By taking science as a critical activity an issue such as the quantitative imperative loses its defining force as a hallmark of science it provides epistemic access to certain parts of reality In addition essentially critical activities characteristic of various qualitative approaches may be welcomed as proper science Academics professionals and researchers in psychology would find value in situating their scholarly work in a realist metatheory avoiding the pitfalls of traditional methodologies and theories

Theories of Scientific Method Robert Nola, Howard Sankey, 2014-12-18 What is it to be scientific Is there such a thing as scientific method And if so how might such methods be justified Robert Nola and Howard Sankey seek to provide answers to these fundamental questions in their exploration of the major recent theories of scientific method Although for many scientists their understanding of method is something they just pick up in the course of being trained Nola and Sankey argue that it is possible to be explicit about what this tacit understanding of method is rather than leave it as some unfathomable mystery They robustly defend the idea that there is such a thing as scientific method and show how this might be legitimated This book begins with the question of what methodology might mean and explores the notions of values rules and principles before investigating how methodologists have sought to show that our scientific methods are rational Part 2 of this book sets out some principles of inductive method and examines its alternatives including abduction IBE and hypothetico deductivism Part 3 introduces probabilistic modes of reasoning particularly Bayesianism in its various guises and shows how it is able to give an account of many of the values and rules of method Part 4 considers the ideas of philosophers who have proposed distinctive theories of method such as Popper Lakatos Kuhn and Feyerabend and Part 5 continues this theme by considering philosophers who have proposed naturalised theories of method such as Quine Laudan and Rescher This book offers readers a comprehensive introduction to the idea of scientific method and a wide ranging discussion of how historians of science philosophers of science and scientists have grappled with the question over the last fifty years

Recent Themes in the Philosophy of Science S. Clarke, T.D. Lyons, 2013-03-09 Australia and New Zealand boast an active

community of scholars working in the field of history philosophy and social studies of science Australasian Studies in History and Philosophy of Science aims to provide a distinctive publication outlet for their work Each volume comprises a group of thematically connected essays edited by scholars based in Australia or New Zealand with special expertise in that particular area In each volume a majority of the contributors are from Australia or New Zealand Contributions from elsewhere are by no means ruled out however and are actively encouraged wherever appropriate to the balance of the volume in question Earlier volumes in the series have been welcomed for significantly advancing the discussion of the topics they have dealt with I believe that the present volume will be greeted equally enthusiastically by readers in many parts of the world R W Home General Editor Australasian Studies in History And Philosophy of Science viii ACKNOWLEDGEMENTS The majority of the papers in this collection had their origin in the 2001 Australasian Association for History Philosophy and Social Studies of Science annual conference held at the University of Melbourne where streams of papers on the themes of scientific realism and commonsense were organised

Karl Popper Friedel Weinert, 2023-01-01 Karl R Popper is widely regarded as one of the most influential 20th century philosophers In this new biography Weinert provides a comprehensive and accessible account of his life and work also addressing Popper's role as a public intellectual Drawing on a wide range of sources and interviews with former colleagues and collaborators he recounts not only the wide interest from the scientific community but also the inspiration that politicians took from Popper's work The book surveys the vast and varied intellectual landscape of Popper's philosophical journey during his long career from the natural and social sciences physics evolution sociology to political philosophy and the philosophy of mind It pays significant attention to Popper's critical method i e the notion that ideas and institutions should be exposed to rigorous tests the approach that led him to a fervent defence of objectivity rationality and realism against all forms of irrationalism as well as a passionate advocacy of freedom social justice and liberal democracy against all forms of authoritarianism The book brings Popper into focus as a modern Enlightenment philosopher
