Realistic Evaluation:

Realistic Evaluation Ray Pawson, Nicholas Tilley, 1997-04-23 Realistic Evaluation shows how program evaluation needs to be and can be bettered. It presents a profound yet highly readable critique of current evaluation practice and goes on to introduce a manifesto and handbook for a fresh approach. The main body of this book is devoted to the articulation of a new evaluation paradigm which promises greater validity and utility from the findings of evaluation studies. The authors call this new approach realistic evaluation. The name reflects the paradigm's foundation in scientific realist philosophy: its commitment to the idea that programmes deal with real problems rather than mere social constructions and its primary intention which is to inform realistic developments in policy making that benefit programme participants and the public. Ray Pawson and Nicholas Tilley argue with passion that scientific evaluation requires a careful blend of theory and method, quality and quantity, ambition and realism. The book offers a complete blueprint for evaluation activities running from design to data collection and analysis to the cumulation of findings across programmes and onto the realization of research into policy. The argument is developed using practical examples throughout and is grounded in the major fields of programme evaluation. This book will be essential reading for all those involved in the evaluation process, especially those researchers, students and practitioners in the core disciplines of sociology, social policy, criminology, health and education. This book is a must for those engaged in the field, providing a fully illustrated text on evaluation with numerous examples from the criminal justice system. Unusually, it offers something for the academic practitioner and student alike. I found Pawson and Tilley's latest work on evaluation an enjoyable and informative read. For myself, their realistic evaluation clarified and formalised a jumbled set of ideas I had already been developing. Although not everyone will agree with the methodology proposed by the authors, this book is a valuable read as it will cause most of us at least to review our methodological stance. *International Journal of Police Science and Management*. This is an engaging book with a strong sense of voice and communicative task. The voice is sometimes strident but always clear. Its communicative qualities are evident equally in its structure, lots of signposting for the reader within and across chapters. *Language Teaching Research*. This provocative, elegant and highly insightful book focuses on the effective incorporation of actual practice into the formulation of evaluation methodology. What a pleasure to read sentences like 'The research act involves learning a stakeholder's theories, formalizing them and teaching them back to that informant who is then in a position to comment upon, clarify and further refine the key ideas.' Pawson and Tilley have given us a wise, witty and persuasive account of how real practitioner experience might be encouraged to intrude on and modify researchers' concepts about program processes and outcomes. This holds important promise for achieving something that is devoutly to be wished: closer interaction among at least some researchers and some policy makers. Eleanor Chelimsky, Past President of the American Evaluation Association. This is a sustained methodological argument by two worldly-wise social scientists. Unashamedly intellectual, theoretically ambitious, yet with a clear but bounded conception of evaluation.

It is articulate occasionally eloquent and always iconoclastic whilst eschewing paradigm wars The Pawson and Tilley realist call to arms threatens to take no prisoners among experimentalists constructivists or pluralists It is the kind of book that clarifies your thoughts even when you disagree with everything they say Elliot Stern The Tavistock Institute **Realistic Evaluation** Ray Pawson, Nick Tilley, 1997-06-23 Table of Contents *The Science of Evaluation* Ray Pawson, 2013-02-01

Evaluation researchers are tasked with providing the evidence to guide programme building and to assess its outcomes As such they labour under the highest expectations bringing independence and objectivity to policy making They face huge challenges given the complexity of modern interventions and the politicised backdrop to all of their investigations They have responded with a huge portfolio of research techniques and through their professional associations have set up schemes to establish standards for evaluative inquiry and to accredit evaluation practitioners A big question remains Has this monumental effort produced a progressive cumulative and authoritative body of knowledge that we might think of as evaluation science This is the question addressed by Ray Pawson in this sequel to *Realistic Evaluation and Evidence based Policy* In answer he provides a detailed blueprint for an evaluation science based on realist principles *Realist Evaluation* Ana Manzano, Emma Williams, 2024-11-29

approaches *Cutting through Complexity* Amy-Jane A. Gielen, 2025-10-01 Programmes and interventions to counter violent extremism CVE have become widespread across Europe CVE is a relatively new and very complex phenomenon The term itself has become a contested catch phrase for a broad array of interventions targeting different populations at different stages in the radicalization process The complexity of CVE has resulted in a serious lack of evaluations in the field Those few evaluations that we can draw upon are very heterogeneous both in terms of evaluation method and the type of interventions that they address It is therefore impossible to make any grounded statements on the effectiveness of CVE Academia thus has little theoretical basis for adequately advising the policy and practitioner community on the best course of action We are thus in need of an evaluation method that can accommodate the complexity of CVE while providing an authoritative basis for new evaluations and at the same time exposing incorrect or too limited normative assumptions in CVE policy We also require a meta analysis method for synthesizing the variety of evaluations available to produce generic insights This study applies and further develops realistic evaluation and realist review to provide an evaluation and synthesis method for complex social programmes such as CVE The end result is heuristic development of the realistic evaluation method which provides a basis for future CVE evaluation studies The dissertation also provides insights on relevant contexts and mechanisms in CVE which will help policymakers further develop their CVE programmes *Doing Realist Research* Nick Emmel, Joanne Greenhalgh, Ana Manzano, Mark Monaghan, Sonia Dalkin, 2018-06-18 Bringing together leading theorists researchers and policy makers with expertise in using realist methods this book is a definitive guide to putting realist methodologies into practice Not just an overview of the field this book looks to extend current debates and apply realist methods to new and practical challenges in social research Featuring practical worked examples of how to turn theory into evidence it empowers readers not just to understand realist methods but to use them It will help readers Negotiate the complexity of relational systems Understand the importance and relevance of cumulative theory Address concerns over data sources and quality Be flexible and creative in realist approaches Produce useful evidence for policy Sophisticated and globally minded this book is the perfect addition to the ongoing development and application of realist methods across evaluation synthesis and social research **Global Handbook of Health Promotion Research, Vol. 3** Didier Jourdan, Louise Potvin, 2023-02-28 While research teams are producing relevant and valid knowledge for health promotion there is not yet a structured manual and distinct field of health promotion research This timely state of the art handbook contributes to structuring the field of health promotion research This collection presents introductory level methodological solutions to the major epistemological methodological and ethical challenges facing health promotion research It brings together experts from different research traditions that coexist in the field The handbook covers the existing knowledge production and sharing practices to delineate the discipline and its agenda for future research Ultimately it contributes to creating a global community of health promotion researchers This volume concerns research practices relevant to the production and sharing of knowledge about health
