The Reasoning Architect Garry Stevens,1990

Environmental Issues for Architecture David Lee Smith,2011-02-16

This primer for architects explores the basic physical principles and requirements of every aspect of passive and active controls in buildings Avoiding needless jargon *Environmental Issues for Architecture* supports an understanding of environmental systems in order to inform architectural design With topics ranging from lighting acoustics thermal control plumbing fire protection and egress to elevators and escalators all of the latest technologies are supported Designer friendly this rich resource gives just enough technical information for architects to design buildings that are efficient and comfortable

Engineering Design Clive L. Dym,David C. Brown,2014-04-17

Contrary to popular mythology the designs of favorable products and successful systems do not appear suddenly or magically This second edition of *Engineering Design* demonstrates that symbolic representation and related problem solving methods offer significant opportunities to clarify and articulate concepts of design to lay a better framework for design research and design education Artificial Intelligence AI provides a substantial body of material concerned with understanding and modeling cognitive processes This book adopts the vocabulary and a paradigm of AI to enhance the presentation and explanation of design It includes concepts from AI because of their explanatory power and their utility as possible ingredients of practical design activity This second edition has been enriched by the inclusion of recent work on design reasoning computational design AI in design and design cognition with pointers to a wide cross section of the current literature

Two Spheres

Leonard Bachman,2012-06-14 Explaining the connection between physical and strategic design this book proposes an aesthetic connection between two equal aspects of architectural design the Real and the Ideal Addressing architectural thinkers from the broad realms of academia and practice it is suitable either as a seminar text a guide to contemporary design issues or as a theoretical work Beginning with a historical perspective the book looks at some of the key conflicts in architectural thought that were brought about by postindustrial change The discussion shifts to clearly describe the forms of complexity how these have interacted with architecture and the possibilities in fully embracing complexity in architectural practice Although there are many books focusing on complexity science there are few that focus on the relationship between complexity and design and none which take such a comprehensive approach

Constructing the Architect

Leonard R. Bachman,2019-01-22 Unlike books that concentrate on the monuments and other artefacts that architects produce *Constructing the Architect* focuses on architecture as a disciplinary and professional process an institution of society and a career of learning and mastery In doing so it offers a lens into the architecture of architecture Mapping architecture as a coherent whole Leonard Bachman shows that the field must be understood as four mutually reinforcing modes of inquiry design research strategy and education Within this framework he explains how institutions and actors hold differing perspectives on the critical discourse that advances architecture and identifies the various tensions and leverage points for change within the discipline Featuring over

100 illustrations to support understanding of this highly visual subject this is an essential introduction for any student seeking to understand what it means to be an architect and to enter the professional discourse

The Theory of Architecture Paul-Alan Johnson, 1994-04-18 The Theory of Architecture Concepts Themes Practices Paul Alan Johnson Although it has long been thought that theory directs architectural practice no one has explained precisely how the connection between theory and practice is supposed to work This guide asserts that architectural theory does not direct practice but is itself a form of reflective practice Paul Alan Johnson cuts through the jargon and mystery of architectural theory to clarify how it relates to actual applications in the field He also reveals the connections between new and old ideas to enhance the reader's powers of critical evaluation Nearly 100 major concepts themes and practices of architecture as well as the rhetoric of architects and designers are presented in an easily accessible format Throughout Johnson attempts to reduce each architectural notion into its essential concept By doing so he makes theory accessible for everyday professional discussion Topics are arranged under ten headings identification definition power attitudes ethics order authority governance relationship and expression Areas covered under these headings include Utopic thought in theories of architecture Advocacy and citizen participation in architecture The basis of architectural quality and excellence The roles of the architect as artist poet scientist and technologist Ethical obligations of architecture Rationales for models and methods of design How authority is determined in architecture How architects structure their concepts Conventions of communication within the architectural profession Each section begins by showing the etymology of key terms of the topic discussed along with a summary history of the topic's use in architecture Discussions probe the conceptual and philosophical difficulties of different theories as well as their potential and limitations in past and present usage Among the provocative issues discussed in terms of their relationship to architecture are chaos theory feminism service to the community and the use of metaphor Johnson points out with stunning clarity the intentions as well as the contradictions and inconsistencies of all notions and concepts All architects and designers as well as students and teachers in these disciplines will gain many insights about architectural thought in this groundbreaking text

Integrated Buildings Leonard R. Bachman, 2004-01-27 An anatomical study of building systems integration with guidelines for practical applications Through a systems approach to buildings Integrated Buildings The Systems Basis of Architecture details the practice of integration to bridge the gap between the design intentions and technical demands of building projects Analytic methods are introduced that illustrate the value benefit and application of systems integration as well as guidelines for selecting technical systems in the conceptual schematic and design development stages of projects Landmark structures such as Eero Saarinen's John Deere Headquarters Renzo Piano's Kansai International Airport Glenn Murcutt's Magney House and Richard Rogers's Lloyd's of London headquarters are presented as part of an extensive collection of case studies organized into seven categories Laboratories Offices Pavilions Green Architecture High Tech Architecture Airport Terminals Residential Architecture Advanced material is provided on

methods of integration including an overview of integration topics the systems basis of architecture and the integration potential of various building systems An expanded case study of Ibsen Nelsen s design for the Pacific Museum of Flight is used to demonstrate case study methods for tracing integration through any work of architecture Visually enhanced with more than 300 illustrations diagrams and photographs Integrated Buildings The Systems Basis of Architecture is a valuable reference guide for architecture and civil engineering students as well as architects engineers and other professionals in the construction industry

Design Added Value Ömer Akin,2021-07-22 Design has intrinsic economic value To make this value tangible design features of buildings need to be explored measured and taken into account when initiating projects and financing their construction It is as calculable as the extrinsic value of a project However we need concepts strategies methods techniques and tools to do just that The Value Based Design approach and Design Added Value D AV methodology in this book enables architects engineers contractors and owner clients of buildings to benefit from extraordinary design and construction features It explains the rationale and motivation for D AV methodology outlines and illustrates this methodology with examples provides complete and detailed examples of how the key analysis techniques work through historical case studies and describes specific methods used in application of the D AV methodology such as Bayesian statistics cost benefit analysis pairwise comparison techniques cognitive walkthroughs and optimization

Sources of Architectural Form Mark Gelernter,1995-06-15 Provides a critical history of Western architecture theory from the ancient world to the present day It looks at how the architect generates architectural form in order to explain a number of issues including the origins of style the persistence of tradition and the role of genius

Space Structures A. Loeb,2012-12-06 xiv aggregates this

touches on the very nature of things The concept of statistical symmetry which Loeb develops is particularly important it emphasizes the limitations in seemingly random aggregates and for permits general statements of which the crystallographer's symmetries are only special cases The reductionist and holistic approaches to the world have been at war with each other since the times of the Greek philosophers and before In nature parts clearly do fit together into real structures and the parts are affected by their environment The problem is one of understanding The mystery that remains lies largely in the nature of structural hierarchy for the human mind can examine nature on many different scales sequentially but not simultaneously Arthur Loeb's monograph is a fundamental one but one can sense a development from the relations between his zero and three dimensional cells to the far more complex world of organisms and concepts It is structure that makes the difference between a cornfield and a cake between an aggregate of cells and a human being between a random group of human beings and a society We can perceive anything only when we perceive its structure and we think by structural analogy and comparison Several books have been published showing the beauty of form in nature This one has the beauty of a work of art but it grows out of rigorous mathematics and from the simplest of bases dimensionality extent and valency **Iron**
