Recent Advances In Alternate Energy Sources:

Recent Advances in Renewable Energy Automation and Energy Forecasting Sarat Kumar Sahoo, Franco Fernando Yanine, Vikram Kulkarni, Akhtar Kalam, 2023-12-08 The advancement of sustainable energy is becoming an important concern for many countries. The traditional electrical grid supports only one way interaction of power being delivered to the consumers. The emergence of improved sensors, actuators, and automation technologies has consequently improved the control, monitoring, and communication techniques within the energy sector, including the Smart Grid system. With the support of the aforementioned modern technologies, the information flows in two ways between the consumer and supplier. This data communication helps the supplier in overcoming challenges like integration of renewable technologies, management of energy demand, load automation, and control. Renewable energy (RE) is intermittent in nature and therefore difficult to predict. The accurate RE forecasting is very essential to improve the power system operations. The forecasting models are based on complex function combinations that include seasonality, fluctuation, and dynamic nonlinearity. The advanced intelligent computing algorithms for forecasting should consider the proper parameter determinations for achieving optimization. For this, we need new generation research areas like Machine Learning (ML) and Artificial Intelligence (AI) to enable the efficient integration of distributed and renewable generation at large scale and at all voltage levels. The modern research in the above areas will improve the efficiency, reliability, and sustainability in the Smart grid. *Recent Advances in Renewable Energy Systems* Mohan Kolhe, Aziz Muhammad, Abdel El Kharbachi, Tri Yogi Yuwono, 2022-07-26 This book presents the select proceedings of 5th International Conference on Mechanical Engineering (ICOME 2021). It discusses the recent challenges and trends in renewable energy in Asia. Various topics covered include electrical energy, new and renewable energy, energy engineering and management, fuels and combustion, turbomachinery, and HVAC.
