Pandey,R.D. Misra,P.K. Patowari,U.S. Dixit,2021-01-10 This book presents the select proceedings of the International Conference on Recent Advancements in Mechanical Engineering ICRAME 2020 It provides a comprehensive overview of the various technical challenges faced their systematic investigation contemporary developments and future perspectives in the domain of mechanical engineering The book covers a wide array of topics including fluid flow techniques compressible flows waste management and waste disposal bio fuels renewable energy cryogenic applications computing in applied mechanics product design dynamics and control of structures fracture and failure mechanics solid mechanics finite element analysis tribology nano mechanics and MEMS robotics supply chain management and logistics intelligent manufacturing system rapid prototyping and reverse engineering quality control and reliability conventional and non conventional machining and ergonomics This book can be useful for students and researchers interested in mechanical engineering and its allied fields

International Symposium on Recent Advances in Microwave Technology ,1989 Recent Advances in Systems, Control and Information Technology Roman Szewczyk,Małgorzata Kaliczyńska,2016-11-29 This book presents the proceedings of the International Conference on Systems Control and Information Technologies 2016 It includes research findings from leading experts in the fields connected with INDUSTRY 4.0 and its implementation especially intelligent systems advanced control information technologies industrial automation robotics intelligent sensors metrology and new materials Each chapter offers an analysis of a specific technical problem followed by a numerical analysis and simulation as well as the implementation for the solution of a real world problem **Recent Advances in Medical Thermology** E. Francis J. Ring,Barbara

Phillips,2012-12-06 I am delighted to have been invited to Bath for the opening of this Third International Congress of Thermology The connection between the Congress and the City of Bath is significant The properties of sunlight have been recognized throughout the centuries Indeed many ancient religions were based on the worship of the sun gods The study of

radiant heat was pioneered by Sir William Herschel whose experiments led him to the study of heat and ultimately of infrared radiation His son John furthered these experiments and formed an image by evaporating alcohol with carbon In modern technology infrared radiation plays a vital role in a wide range of applications Thermal imaging is widely used in the manufacturing industries especially plastics glass and paper The motor industry for example employs thermography in the design of windscreens and tire development Chemical plants and refineries also use it in the important control of expensive energy losses The communications industry makes extensive use of thermal imaging since overheating and cracks in insulation may cause the unscheduled shut down of expensive equipment There is now a special thermal imaging system for the examination of very large scale integrated circuits to help in the development of diagnostic tools for examining circuits which now have features of 1 micron in size making the conventional method of mechanical probing impossible This revolution in probing will enable us to maintain the high levels of quality control which are essential in the communications industry

Proceedings of 3rd International Symposium on Recent Advances in Microwave Technology (ISRAMT '91),

August 18-21, 1991, Reno, Nevada, U.S.A. Banmali S. Rawat, Krishna K. Agarwal, 1991

Recent Advances in Electromagnetic Theory H.N. Kritikos, Dwight L. Jaggard, 2012-12-06 The contributions of this book represent only a small sample of the work of the many researcher electromagneticians who have had the pleasure of being associated with Professor Papas either as students or as colleagues Many of us continue to work in the many and diverse areas that modern electro magnetism encompasses There is however a common thread that was derived from our association with Professor Papas that has greatly influenced our thinking and technical style of expression Professor Papas from his studies at Harvard brought with him to Pasadena a very fundamental and classical point of view that was instilled in all those who were associated with him He saw research problems as a combination of fundamental physical and mathematical principles and the electromagnetic reality He searched and demanded clarity and often in the rather involved and engaging discussions which took place in his office he demanded that the baby picture be clearly drawn on the blackboard This requirement certainly for some of us who were working in widely varied subjects ranging from relativistic plasmas to almost periodic media has forced us to reexamine the fundamentals The clear and lucid marriage of fundamental concepts to applications has been the trademark of Professor Papas's intellectual tradition and has greatly influenced the thinking of all of those who have associated with him

Recent Advances in Porous Ceramics Uday M. Basheer Al-Naib, 2018-09-19 Porous ceramics have recently gained growing importance in industry because of their many applications like filters absorbers dust collectors thermal insulation hot gas collectors dielectric resonators bioreactors bone replacement and automobile engine components Generally porous ceramics have good properties such as mechanical strength abrasion resistance and chemical and thermal stability These porous network ceramic structures also have relatively low density low mass and low thermal conductivity Furthermore permeability is one of the most important properties of porous ceramics for different applications such as membranes because this property directly relates to the pressure drop during filtration Pore size control is one key factor in fabrication of porous ceramics The size of particles and their distribution of the raw materials manufacturing techniques types of binder used distribution of binder and sintering affect the final porosity and pore connectivity are important things that must be considered during the manufacturing of a porous ceramic body Therefore the development of porous ceramic research requires sufficient mechanical and chemical stability as well as permeability This book covers a wide range of topics such as porous ceramic structure and properties preparation simulation and fabrication sintering applications for bioceramics sensors magnetics and energy saving
