Recent Progress In Photobiology:

Recent Progress in Photobiology E Bowen, 2012-12-02 Recent Progress in Photobiology contains the proceedings of the Fourth International Photobiology Congress held in Oxford on July 26-30 1964 and organized by a committee set up by the British Photobiology Group. Contributors explore the developments in photobiology particularly with respect to biological structures, chemical changes and molecular energy. This volume is organized into 10 sections encompassing 33 chapters and begins with an overview of basic photochemical processes that have direct implications on photobiology. The next chapters discuss the photochemistry of nucleic acids and their derivatives with some reference to their biological significance. The book also studies the visual processes in humans and animals, the structure, pigment chemistry and function of photoreceptor systems of plant and animal cells and receptor mechanisms in human vision. The natural photoenvironment and its influence on life and development is also explained, emphasizing how light shapes the ultimate fate of an organism in its habitat. The remaining chapters focus on energy conversion and photosynthesis, micro-irradiation of cells, photochemistry and photobiology of space research, light and melanin pigmentation of the skin and the effect of light on plant and animal cells. This book will be of interest to biologists and physiologists as well as to anyone engaged in photobiological research.

Concepts in Photobiology G.S. Singhal, G. Renger, S.K. Sopory, K.D. Irrgang, Govindjee, 2012-12-06 Photobiology is an important area of biological research since a very

large number of living processes are either dependent on or governed by light that we receive from the Sun Among various subjects photosynthesis is one of the most important and thus a popular topic in both molecular and organismic biology and one which has made a considerable impact throughout the world since almost all life on Earth depends upon it as a source of food fuel and oxygen However for growth of plants light is equally essential and research on photomorphogenesis has revealed exciting new developments with the application of newer molecular biological approaches The present book brings together and integrates various aspects of photosynthesis biology of pigments light regulation of chloroplast development nuclear and chloroplast gene expression light signal transduction other photomorphogenetic processes and some photoecological aspects under one cover The chapters cover biochemical and molecular discussions of most of the above topics in a comprehensive manner and include a wide range of hot topics that are currently under investigation in the field of photobiology of cyanobacteria algae and plants The authors of this book are selected international authorities in their fields from USA Europe Australia and Asia The book is designed primarily to be used as a text book by graduates and post graduates It is however also intended to be a resource book for new researchers in plant photobiology Several introductory chapters are designed as suitable reading for undergraduate courses in integrative and molecular biology biochemistry and biophysics
