Renewable Energy Today's Contribution Tomorrow's Promise:

Renewable Energy from the Ocean William H. Avery, Chih Wu, 1994 As a result of the energy crisis of the 1970s the United States invested millions of dollars for research and development of Ocean Thermal Energy Conversion OTEC This technical report gives details of a project studying the potential use of OTEC Prospects for Sustainable Energy Edward S. Cassedy, 2000-04-06 Fossil fuels are a finite resource and their continued use as the world's dominant energy supply is damaging the environment Future use of alternative methods of energy supply is inescapable and this book explores the historical origins technical features marketability and environmental impacts of the complete range of sustainable energy technologies solar biomass wind hydropower geothermal power ocean energy sources solar derived hydrogen fuel and energy storage The aim is to inform policy analysts and decision makers of the options available for sustainable energy production The book is therefore written so as to be accessible to an audience from a broad range of backgrounds and scientific training It will also be a valuable supplementary text for advanced courses in environmental studies energy economics and policy and engineering A Solar Manifesto Hermann Scheer, 2021-12-16 In the decade since the Earth Summit in Rio de Janeiro the response of the world's governments and authorities to the threats to the global environment has been to enforce the reduction of energy consumption and harmful emissions solutions primarily based around conventional energy resources and conventional thinking The question is though whether this strategy is radical enough to address the key challenges how facing the environment and whether it can be effective in avoiding catastrophe on a global scale For Herman Scheer the answer is a definite no In this fully updated edition of A Solar Manifesto he once more attacks the lack of political will to find answers outside a conventional frame of reference Climate change pollution deforestation destruction of the ozone layer poverty and the population explosion are all problems created or exacerbated by the use of conventional energy Seven years after the first edition of this book answers are now more urgently required than ever as current policies serve merely to alleviate the escalating symptoms rather than attempting a cure for what could become a terminal affliction Herman Scheer shows that this crisis may yet be reversed but it can only be made to happen through a fundamental change in political and economic strategies paving the way towards a global solar energy economy sustained by new social principles A Solar Manifesto champions the replacement of fossil and nuclear fuels with solar energy as a real solution to the threat to the environment and associated social consequences Scheer constructs a radical yet innovative political and economic model and argues the case with passion and conviction for the global solar economy as the route to a sustainable environment Thought provoking and profoundly challenging this book will be an inspiration to anyone concerned with energy and the global environment **Energy Investments and the Environment** Corazon M. Siddayao, Lisa A. Griffin, 1993-01-01 This volume shows how to develop new energy sources in ways that are less damaging to the environment than previous practices have been Contributors to the compilation discuss how developing countries can identify the most

important environmental issues for their energy investments measure the costs and benefits including environmental considerations of sustainable energy development incorporate macroeconomic and institutional issues into energy planning The editors highlight the institutional barriers to energy development planning that takes into consideration the environmental effects They outline typical environmental impacts of renewable energy systems and provide an overview of applicable technologies The report also discusses environmental policy in the production and consumption of oil and gas with a review of pollution standards and control And one section explores issues concerning greenhouse gases such as how to apply controls fairly These technical materials are a product of the program on energy policy and planning of the World Bank's Economic Development Institute This volume will help policymakers and planners identify environmental issues in energy investments

Conventional Fuels and Energy Security United States. Congress. House. Committee on Banking, Finance, and Urban Affairs. Subcommittee on Economic Stabilization, 1989 Biotechnology: Economic and Social Aspects E. J. DaSilva, C. Ratledge, A. Sasson, 1992-04-30 This book was first published in 1992 This book deals with an area of great importance the issues involved in developing biotechnologically based industries in the developing countries The science and most of the techniques are well established and it is often possible to obtain the desired finance This book however examines the sort of choices that a developing country has to make as to whether to go ahead with any of the projects outlined in the book and their likely socio economic consequences Each chapter is written by experts in their field and discusses the current biotechnologically based industries and their state of development their suitability for various economies and the problems associated with developing them Chapters discuss environmental questions and further socio economic factors that need to be considered in order to bring about successful wealth creation in these countries This book will be invaluable reading for all those interested in biotechnology and its application to the developing world
