

of Words lists of words often used and of words to be preferred are given. We cannot follow the author's practice here in every case. Chronic interstitial nephritis is not the equivalent of *Bright's disease*; the latter expression connotes, certainly, much more than the former. It is not often that it is desirable to add a personal name to a disease, but this is one of the cases where it seems to be an advantage. When used in an adjectival sense we prefer *round-celled* to *round-cell*.

Bibliographical references should be exact, complete, and set down in accordance with standard practice.

The book is concluded by a complete list of standard abbreviations for the names of medical journals, and an excellent index.

We know of no better book for its purpose than Mrs. Mellish-Wilsons's "The Writing of Medical Papers."

A. G. NICHOLLS

Practical Materia Medica. Clayton S. Smith, Ph.D., M.D., and Helen L. Wilkoff, Ph.D. 300 pages. Price \$3.25. Lea & Febiger, Philadelphia, 1929.

Drugs are dealt with according to their composition under the main divisions, Inorganic and Organic, with the following chapter headings, metals, acid, non-metallic elements; the aliphatic series, the aromatic series, terpenes, carbohydrates, glycosides, fats, aliphatic compounds containing nitrogen, alkaloids. Part three is devoted to toxicology and part four deals with prescription writing.

The authors are more interested in chemistry than in physiology. Instead of definitely and clearly stating the physiological action of the drug under discussion and letting the student or the practitioner judge for himself whether he will use it or not, they make statements such as "Uva ursi is used almost exclusively in the treatment of catarrh of the urinary tract, especially acute cystitis. Formerly it was employed in the treatment of gravel, nephritis, urethritis and hemorrhagia, but its use for these conditions has largely been abandoned. Uva ursi probably owes its antiseptic action to the formation of hydroquinone which results from the hydrolysis of arbutin in the body." Again "Nuroquin base, a proprietary remedy is synthesized from quinine. Its use has been recommended in the treatment of lobar pneumonia." Some experimental or clinical evidence should have been adduced to support this statement. Again, "codeine is used in expectorant mixtures and to allay intestinal and pelvic pains." Many do not confine its use to effects on these areas.

Is not the placing of questions after a chapter, as these authors have done, an admission of belief that the instructor lacks the intelligence to frame his own? The antiodotal treatment of poisons is clear, concise and practical; to the practitioner this section will be the most useful; the medical student will find it a concise reference book, but will need a fuller text for the complete story of what drugs do.

LILLIAN A. CHASE

Report on Fourth International Congress of Military Medicine and Pharmacy. Warsaw, Poland, May-June, 1927. William Seaman Bainbridge, M.C.F., United States Naval Reserve. 248 pages, illustrated. The Collegiate Press, Menasha, Wisconsin.

This is an official report of the Congress held at Warsaw, Poland, in May and June, 1927. Meeting every second year, the fifth Congress has been in Session in London, England, during May, 1929, and has been reported in the *British Medical Journal* of May 18. At the Warsaw meeting thirty-one countries and the Red Cross were represented by about 225 official delegates, and discussed were Evacuation in Moving

Warfare; Etiology and Prophylaxis of Infusoria; Sequels of Traumatism of the Skull; the Arsenobenzols, their chemical determination; and Organization of Dental Services. The volume of proceedings, as reported by the official representative of the United States, is a valuable addition to the literature of Military Medicine.

J. H. ELLIOTT

Tuberculous Intoxications, Concealed and Masked Tuberculosis. Joseph Hollis, M.D. 132 pages. Price \$3.00. Edinburgh, E. & S. Livingstone. Toronto, Macmillan Co. of Canada, 1929.

In this small volume the author describes many and varied vague symptoms which he believes are caused by the toxic absorption from old standing and seemingly inactive tuberculous foci. Among the various symptom-complexes he notes those characteristic of neurasthenia, rheumatism, neuralgia, thyrotoxic epilepsy and also many disturbances of the digestive and genito-urinary systems. His chapter on immunity to tuberculosis is of interest. He lays particular stress on two observations, viz., "Hereditary immunity plays a large rôle in decreasing the intensity of the tuberculosis which may affect generation after generation," and "There is actually a tendency toward tuberculosis in everyone descending from parents free from tuberculosis." But this as it may, he cites numerous case reports to illustrate his observations and theories.

Dr. Hollis combats these intoxications by means of tuberculin and immune blood. The latter he administers either hypodermically or by injection in dilutions as high as 1:10,000.

He obtains his immune blood by the inoculation of rabbits with cultures made from the tuberculous sputum, and uses the washed and subsequently hamolized red cells.

A. H. MACCORDECK

Percussion of the Chest. J. B. McDougall, M.D. H. K. Lewis & Co., London, 1929. 6/- net.

This book might be regarded as an attempt at presenting percussion of the chest "in extenso". The subdivisions are entitled as follows: I. Historical. II. The Technique of Thoracic Percussion. III. The Acoustic Aspect. IV. Variations in the Percussion Note in Certain Diseases of the Chest.

The historical survey includes the epoch-making contribution of Auenbrugger's in 1761, the revival of the art of percussion by Corvisart in 1808 and the improvements in technique brought about by Pierry, Skoda, Goldschneider and others.

In the section on the technique of thoracic percussion there is a strong plea for light percussion. This chapter is of especial value to the teacher and student as it contains many practical clinical suggestions.

The third part, the acoustic aspect, classifies the sounds heard on percussion and describes completely the constituent parts of the sounds, viz., intensity, duration, pitch and quality.

Finally the author links up the common clinical thoracic lesions with this important everyday method in physical diagnosis. There is an extensive bibliography from which the author has made numerous citations.

The author has limited himself entirely to the subject and perusal of the book will well repay those interested in clinical medicine.
