Report On Tertiary Plants Of British Col:

Geological Survey of Canada, Current Research (Online) 2005-A4 Mike E. Villeneuve, 2005 The Quilchena fossil site in the Okanagan Highlands of south central British Columbia is a rich repository of Eocene plant insect fish fossils Reliable age assignment of this site is critical in order to reconstruct the biogeographic climatic evolutionary relationships between the flora fauna of the Okanagan Highlands and those of other Tertiary sites around the world Previous radiometric age determinations have been variable and inconclusive This paper presents new data using uranium lead dating of zircons from a thick tephra combined with argon argon dating of sanidine crystals from the same bed The age determined can be securely ascribed to the Quilchena fossils since the dated tephra was deposited within the fossil bearing shale mudstone sequences
