Representation Of Places Reality And Realism In City Design:

Representation of Places Peter Bosselmann, 1998 People live in cities and experience them firsthand while urban designers explain cities conceptually In *Representation of Places* Peter Bosselmann takes on the challenging question of how designers can communicate the changes they envision in order that the rest of us adequately understand how those changes will affect our lives New modes of imaging technology from two dimensional maps charts and diagrams to computer models allow professionals to explain their designs more clearly than ever before Although architects and planners know how to read these representations few outside the profession can interpret them let alone understand what it would be like to walk along the streets such representations describe Yet decisions on what gets built are significantly influenced by these very representations A portion of Bosselmann's book is based on innovative experiments conducted at the University of California Berkeley's Visual Simulation Laboratory In a section titled *The City in the Laboratory* he discusses how visual simulation was applied to projects in New York City San Francisco and Toronto The concerns that Bosselmann addresses have an impact on large segments of society and lay readers as well as professionals will find much that is useful in his timely accessibly written book

Experiential Walks for Urban Design Barbara E. A. Piga, Daniel Siret, Jean-Paul Thibaud, 2021-08-05 The edited volume explores the topic of experiential walks which is the practice of multi or mono sensory and in motion immersion into an urban or natural environment The act of walking is hence intended as a process of re discovering reflecting and learning through an embodied experience Specific attention is devoted to the investigation of the ambiance of places and its dynamic atmospheric perception that contribute to generating the social experience This topic is gaining increasing attention and has been studied in several forms in different disciplines to investigate the particular spatial social sensory and atmospheric character of places The book contains chapters by experts in the field and covers both the

theory and the practice of innovative methods techniques and technologies It examines experiential walks in the perspective of an interdisciplinary approach to environmental and sensory urban design by organising the contributions according to three specific interrelated focuses namely the exploration and investigation of the multisensory dimension of public spaces the different ways to grasp and communicate the in motion experience through traditional and novel forms of representation and the application of the approach to urban participatory planning and higher education Shedding new light on the topic the book offers both a reference guide for those engaged in applied research and a toolkit for professionals and students

Transforming Public Space through Play Gregor Mews, 2022-04-21 This book provides an empirical analysis of the concept of play as a form of spatial practice in urban public spaces The introduced City Play Framework CPF is a practical urban analysis tool that allows urban designers landscape architects and researchers to develop a shared awareness when opening up this window of possibility for adventure Two case studies substantiate and illustrate the development process and testing of the framework in Canberra Australia and Potsdam Germany The appropriation of public spaces that transcend boundaries can facilitate an intrinsic connection between people and their immediate environment towards a more joyful ontological state of human existence in which imagination co creation and a sense of agency are key elements of the design approach The framework presents an alternative understanding of public spaces and public life reflecting on theory and its implications for practice in a post pandemic world in dense urban centres A bridge between theory and practice this book explores possibilities on what future design ought to be when openness and ambiguity are consciously integrated parts of practice and process The book presents a valuable discussion on public space and play for academic audiences across a wide range of disciplines such as landscape architecture urban design planning architecture and urban sociology which is informative for future practice

Experiential Visualization in Architectural Design Media Vincent B. Canizaro, 2023-10-30 *Experimental Visualization in Architectural Design Media How It Actually Works* is a theoretical practical and interdisciplinary account of the tools used by architects and designers The book focuses on the how these tools influence their ability to envision and craft the future experiential reality of buildings and environments The book is structured around two parallel sets of questions The first concerns the effects of various media on the designer s understanding of their work in experiential terms The media considered include the process of design build standard media such as scale model building hand drawing drafting and extends into the now dominant digitally based design media of BIM digital modeling and emerging VR technologies such as Enscape The second line of questioning seeks patterns of use and other attributes designers deploy in practice to achieve an experiential and meaningful understanding of their work with and through each medium To answer these questions the author provides a detailed assessment of the pros and cons affordance and constraint of each form of mediation and a set of recommendations documenting how experienced designers enhance their visualization skills to support such experiential design This work is interwoven with interdisciplinary consideration of

technology perception media studies history and bolstered by the direct experiences of design professionals This book will be of interest to researchers working in the field of architecture and design as well as practising architects designers and students who are seeking guidance on how to effectively design and consider the experience of their future built environments The Sustainable City VIII (2 Volume Set) S.S. Miniature Monuments Helmut Puff, 2014-06-23 *Miniature Monuments* Modeling German History offers a series of essays on small scale models of bombed out cities Created between 1946 and the present these plastic renderings of places provide eerie glimpses of destruction and devastation resulting of the air war This study thus permits fresh angles on post war responses to the compounded losses of WW II and it does so through considering these miniature monuments of among others Frankfurt Munich Schwetzingen Heilbronn and Hiroshima in a deep cultural history that interlaces the sixteenth eighteenth and twentieth centuries Three dimensional renderings in diminutive size have rarely been subjected to rigorous theoretical reflection Conventionally models whether of ruins or intact spaces have been assumed to be easily legible that is they have been assumed to be vehicles of the authentic Yet rubble and other models should be theorized as complex simulacra of abstract realities and catalysts of memories *Miniature Monuments* thus tackles a haunting paradox building ruins The book elucidates how utterly contingent processes of crumbling and collapse the English words for the Latin ruina came to command such great interest in modern Europe that tremendous efforts were taken to uncover render and most of all recreate ruins
