Kornyshova, Elisabeth Métais, Farid
Meziane**

Representing Time In Natural Language:

Representing Time in Natural Language Alice G. B. ter Meulen, 1997 The topic of temporal meaning in texts has received considerable attention in recent years from scholars in linguistics logical semantics cognitive science and artificial intelligence Representing Time in Natural Language offers a systematic and detailed account of how we use temporal information contained in a text or in discourse to reason about the flow of time inferring the order in which events happened when this is not explicitly stated A new representational system is designed to formalize an appropriately context dependent notion of situated inference The Dynamic Aspect Tree representing temporal dependencies constitutes a novel and important dynamic temporal logic one that makes it easy to see what follows when from the information given in an ordinary English text *Representing Time* Kasia M. Jaszczolt, 2009-02-26 Thinking and speaking about time is ridden with puzzles and paradoxes How do human beings conceptualize time Why for example does the availability of tense vary in different languages How do the lines of information from tense aspect temporal adverbs and context interact in the mind Does time describe events If real time does not flow where do the concepts of the past present and future come from Are they basic concepts or are they composed out of more primitive constituents And finally what is the semantics of expressions with temporal reference This book offers a new approach to the representation of meaning of temporally located utterances and discourses Temporality the author suggests should be taken to mean degrees of certainty understood in turn as degrees of acceptability concerning the eventuality referred to in the speaker's utterance She presents theoretical arguments and empirical evidence from Indo European and non Indo European languages to show that speakers represent the past present and future as degrees of epistemic modality She argues that temporality can be subsumed under the general label of acceptability or attitude and rather like the semantic category of evidentiality founded on the strength of evidence In the approach she develops modality provides basic conceptual building blocks for the concept of time and at the same time semantic building blocks for representing temporal expressions in her framework of Default Semantics Dr Jaszczolt sets the results of her research in the context of linguistic and philosophical work in semantics and pragmatics Representing Time Katarzyna Jaszczolt, 2009 This book offers a new approach to the representation of meaning of temporally located utterances and discourses Temporality the author suggests should be taken to mean degrees of certainty understood in turn as degrees of acceptability concerning the eventuality referred to in the speaker's utterance Exploring Time, Tense, and Aspect in Natural Language Database Interfaces Ion Androutsopoulos, 2002 Drawing upon tense and aspect theories temporal logics and temporal databases this cross discipline book examines relevant issues from the three areas developing a unified theoretical framework that can be used to build natural language interfaces to temporal databases **Knowledge Representation and the Semantics of Natural Language** Hermann Helbig, 2005-12-19 Natural Language is not only the most important means of communication between human beings it is also used over historical periods for the preservation of

cultural achievements and their transmission from one generation to the other During the last few decades the flood of digitalized information has been growing tremendously This tendency will continue with the globalization of information societies and with the growing importance of national and international computer networks This is one reason why the theoretical understanding and the automated treatment of communication processes based on natural language have such a decisive social and economic impact In this context the semantic representation of knowledge originally formulated in natural language plays a central part because it connects all components of natural language processing systems be they the automatic understanding of natural language analysis the rational reasoning over knowledge bases or the generation of natural language expressions from formal representations This book presents a method for the semantic representation of natural language expressions texts sentences phrases etc which can be used as a universal knowledge representation paradigm in the human sciences like linguistics cognitive psychology or philosophy of language as well as in computational linguistics and in artificial intelligence It is also an attempt to close the gap between these disciplines which to a large extent are still working separately

Countability in Natural Language Hana Filip, 2021-07 Bringing together an international group of researchers this innovative volume presents the state of the art in research into countability

Natural Language Processing and Information Systems Max Silberztein, Faten Atigui, Elena Kornysheva, Elisabeth Métais, Farid

Meziane, 2018-05-24 This book constitutes the refereed proceedings of the 23rd International Conference on Applications of Natural Language to Information Systems NLDB 2018 held in Paris France in June 2018 The 18 full papers 26 short papers and 9 poster papers presented were carefully reviewed and selected from 99 submissions The papers are organized in the following topical sections Opinion Mining and Sentiment Analysis in Social Media Semantics Based Models and Applications Neural Networks Based Approaches Ontology Engineering NLP Text Similarities and Plagiarism Detection Text Classification Information Mining Recommendation Systems Translation and Foreign Language Querying Software Requirement and Checking

Space and Time in Languages and Cultures Luna Filipović, Kasia M. Jaszczolt, Katarzyna Jaszczolt, 2012 This volume offers novel insights into linguistic diversity in the domains of spatial and temporal reference searching for uniformity amongst diversity A number of authors discuss expression of dynamic spatial relations cross linguistically in a vast range of typologically different languages such as Bezhta French Hinuq Italian Japanese Polish Serbian and Spanish among others The contributions on linguistic expression of time all shed new light on pertinent questions regarding this cognitive domain such as the hotly debated relationship between cross linguistic differences in talking about time and universal principles of utterance interpretation modelling temporal inference through aspectual interactions as well as the complexity of the acquisition of tense aspect relations in a second language The topic of space and time in language and culture is also represented from a different point of view in the sister volume Space and Time in Languages and Cultures Language Culture and Cognition HCP 37 which discusses spatial and temporal constructs in human language cognition and culture in order to

come closer to a better understanding of the interaction between shared and individual characteristics of language and culture that shape the way people interact with each other and exchange information about the spatio temporal constructs that underlie their cognitive social and linguistic foundations

Annotating, Extracting and Reasoning about Time and Events Frank Schilder, Graham Katz, James Pustejovsky, 2007-10-06 This state of the art survey comprises a selection of the material presented at the International Dagstuhl Seminar on Annotating Extracting and Reasoning about Time and Events held in Dagstuhl Castle Germany in April 2005 The seminar centered around an emerging de facto standard for time and event annotation TimeML It features nine papers that detail current research and discuss open problems concerning annotation temporal reasoning and event identification

Eliminating The Universe: Logical Properties Of Natural Language Edward L Keenan, 2018-07-09 This book synthesizes the author's work 1980s 2015 on the logical expressive power of natural language It extends the tools and concepts of model theory as used in higher order predicate logic to the study of natural language semantics It focuses on boolean structure generalized quantification separated from variable binding covering some cases of anaphora Different categories predicates adjective quantifiers are modeled by non isomorphic boolean lattices Of empirical linguistic interest is the expressibility of many natural classes of quantifiers defined in terms of their logical automorphism invariant properties Some of these correlate with classes used syntactically in generative grammar In other cases we find general possibly universal constraints on possible quantifier denotations in natural language Also of novel logical interest are entailment paradigms that depend on relations between pairs or triples of generalized quantifier denoting expressions ones that are in some cases inherently vague In addition we note novel binary quantifiers that lie beyond the Frege boundary in that they are provably not identical to any iterated application of unary quantifiers Of philosophical interest is the existence of models which make the same sentences true as standard models but which lack a universe and hence seemingly a notion of reference Moreover these models generalize to ones in which we can represent some intensional expressions without the use of novel ontological objects such as possible worlds or propositions

Handbook of Knowledge Representation Frank van Harmelen, Vladimir Lifschitz, Bruce Porter, 2008-01-08 Handbook of Knowledge Representation describes the essential foundations of Knowledge Representation which lies at the core of Artificial Intelligence AI The book provides an up to date review of twenty five key topics in knowledge representation written by the leaders of each field It includes a tutorial background and cutting edge developments as well as applications of Knowledge Representation in a variety of AI systems This handbook is organized into three parts Part I deals with general methods in Knowledge Representation and reasoning and covers such topics as classical logic in Knowledge Representation satisfiability solvers description logics constraint programming conceptual graphs nonmonotonic reasoning model based problem solving and Bayesian networks Part II focuses on classes of knowledge and specialized representations with chapters on temporal representation and reasoning spatial and physical reasoning reasoning about knowledge and belief

temporal action logics and nonmonotonic causal logic Part III discusses Knowledge Representation in applications such as question answering the semantic web automated planning cognitive robotics multi agent systems and knowledge engineering This book is an essential resource for graduate students researchers and practitioners in knowledge representation and AI Make your computer smarter Handle qualitative and uncertain information Improve computational tractability to solve your problems easily

The Syntax of Time Jacqueline Guéron, Jacqueline Lecarme, 2004 A collection of recent studies by leading scholars that examines the syntactic analysis of time from varying perspectives

Time, Language, and Ontology M. Joshua Mozersky, 2015 This book brings together in a novel way an account of the structure of time with an account of our language and thought about time Joshua Mozersky argues that it is possible to reconcile the human experience of time which is centred on the present with the objective conception of time according to which all moments are intrinsically alike He defends a temporally centreless ontology along with a tenseless semantics that is compatible with and indeed helps to explain the need for tensed language and thought This theory of time also it is argued helps to elucidate the nature of change and temporal passage neither of which need be denied nor relegated to the realm of subjective experience only The book addresses a variety of topics including whether the past and future are real whether temporal passage is a genuine phenomenon or merely a subjective illusion how the asymmetry of time is to be understood the nature of representation how something can change its properties yet retain its identity and whether objects are three dimensional or four dimensional It is a wide ranging examination of recent issues in metaphysics philosophy of language and the philosophy of science and presents a compelling picture of the relationship of human beings to the spatiotemporal world

Finite-State Methods and Natural Language Processing Anssi Yli-Jyrä, Lauri Karttunen, Juhani Karhumäki, 2006-12-12 This book constitutes the thoroughly refereed post proceedings of the 5th International Workshop on Finite State Methods in Natural Language Processing FSMNLP 2005 held in Helsinki Finland September 2005 The book presents 24 revised full papers and seven revised poster papers together with two invited contributions and abstracts of six software demos Topics include morphology optimality theory some special FSM families weighted FSM algorithms FSM representations exploration ordered structures and surface parsing

Time: Language, Cognition & Reality Katarzyna Jaszczołt, Louis de Saussure, 2013-06-27 Linguists and philosophers examine the representation of temporal reference the interaction of the temporal information from tense aspect modality and context and the representation of the temporal relations between facts events states propositions and utterances They link this to current research in psychology and anthropology

Advanced Artificial Intelligence (Second Edition) Zhongzhi Shi, 2019-08-05 The joint breakthrough of big data cloud computing and deep learning has made artificial intelligence AI the new focus in the international arena AI is a branch of computer science developing intelligent machine with imitating extending and augmenting human intelligence through artificial means and techniques to realize intelligent behaviour This comprehensive compendium consisting of 15 chapters captures the updated achievements of AI It is

completely revised to reflect the current researches in the field through numerous techniques and strategies to address the impending challenges facing computer scientists today The unique volume is useful for senior or graduate students in the information field and related tertiary specialties It is also a suitable reference text for professionals researchers and academics in AI machine learning electrical electronic engineering and biocomputing Time and the Shape of History P. J. Corfield,2007-01-01 In this lively comedy of love and money in sixteenth century Venice Bassanio wants to impress the wealthy heiress Portia but lacks the necessary funds He turns to his merchant friend Antonio who is forced to borrow from Shylock a Jewish moneylender When Antonio's business falters repayment becomes impossible and by the terms of the loan agreement Shylock is able to demand a pound of Antonio's flesh Portia cleverly intervenes and all ends well except of course for Shylock *Understanding Human Time* Kasia M. Jaszczolt,2023-05-02 This book explores the time that we think we experience and the concept of time in our beliefs our knowledge and our fears We believe that time passes we know that death is inevitable we fear that we are going to be late How do these human feelings and sensations of time relate to metaphysical time of tenseless reality What do different languages tell us about the nature of human time And what exactly is the flow of time The chapters in this volume bring together insights from linguists and philosophers to examine questions about time on the micro level of physical reality as well as time in language and discourse on the macro level of social reality The unifying theme is that in order to understand human time we have to discover not only how we think and speak about time but also what it is that makes us think and speak about it in a certain way Advanced Artificial Intelligence (Third Edition) Zhongzhi Shi,2024-11-04 This third edition comprehensively captures the cutting edge research achievements of AI Topics are thoroughly revised and updated presenting the latest techniques and strategies to address the impending challenges facing computer scientists today The useful reference text benefits professionals academics researchers senior and graduate students in the information field and related tertiary specialties *Advances in Natural Language Processing* Tapio Salakoski,Filip Ginter,Sampo Pyysalo,Tapio Pahikkala,2006-08-11 This book constitutes the refereed proceedings of the 5th International Conference on Natural Language Processing FinTAL 2006 held in Turku Finland in August 2006 The book presents 72 revised full papers together with 1 invited talk and the extended abstracts of 2 invited keynote addresses The papers address all current issues in computational linguistics and monolingual and multilingual intelligent language processing theory methods and applications

Representing Time In Natural Language: Bestsellers in 2023 The year 2023 has witnessed a noteworthy surge in literary brilliance, with numerous engrossing novels captivating the hearts of readers worldwide. Lets delve into the realm of popular books, exploring the engaging narratives that have captivated audiences this year. The Must-Read : Colleen Hoover's "It Ends with Us" This touching tale of love, loss, and resilience has gripped readers with its raw and emotional exploration of domestic abuse. Hoover skillfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can prevail. Representing Time In Natural Language : Taylor Jenkins Reid's "The Seven Husbands of Evelyn Hugo" This spellbinding historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reid's compelling storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Discover the Magic : Delia Owens' "Where the Crawdads Sing" This evocative coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens weaves a tale of resilience, survival, and the transformative power of nature, entrancing readers with its evocative prose and mesmerizing setting. These top-selling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of engaging stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a masterful and suspenseful novel that will keep you speculating until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.

Representing Time In Natural Language Introduction

In the digital age, access to information has become easier than ever before. The ability to download Representing Time In Natural Language has revolutionized the way we consume written content. Whether you are a student looking for course material, an avid reader searching for your next favorite book, or a professional seeking research papers, the option to download Representing Time In Natural Language has opened up a world of possibilities. Downloading Representing Time In Natural Language provides numerous advantages over physical copies of books and documents. Firstly, it is incredibly convenient. Gone are the days of carrying around heavy textbooks or bulky folders filled with papers. With the click of a

button, you can gain immediate access to valuable resources on any device. This convenience allows for efficient studying, researching, and reading on the go. Moreover, the cost-effective nature of downloading Representing Time In Natural Language has democratized knowledge. Traditional books and academic journals can be expensive, making it difficult for individuals with limited financial resources to access information. By offering free PDF downloads, publishers and authors are enabling a wider audience to benefit from their work. This inclusivity promotes equal opportunities for learning and personal growth. There are numerous websites and platforms where individuals can download Representing Time In Natural Language. These websites range from academic databases offering research papers and journals to online libraries with an expansive collection of books from various genres. Many authors and publishers also upload their work to specific websites, granting readers access to their content without any charge. These platforms not only provide access to existing literature but also serve as an excellent platform for undiscovered authors to share their work with the world. However, it is essential to be cautious while downloading Representing Time In Natural Language. Some websites may offer pirated or illegally obtained copies of copyrighted material. Engaging in such activities not only violates copyright laws but also undermines the efforts of authors, publishers, and researchers. To ensure ethical downloading, it is advisable to utilize reputable websites that prioritize the legal distribution of content. When downloading Representing Time In Natural Language, users should also consider the potential security risks associated with online platforms. Malicious actors may exploit vulnerabilities in unprotected websites to distribute malware or steal personal information. To protect themselves, individuals should ensure their devices have reliable antivirus software installed and validate the legitimacy of the websites they are downloading from. In conclusion, the ability to download Representing Time In Natural Language has transformed the way we access information. With the convenience, cost-effectiveness, and accessibility it offers, free PDF downloads have become a popular choice for students, researchers, and book lovers worldwide. However, it is crucial to engage in ethical downloading practices and prioritize personal security when utilizing online platforms. By doing so, individuals can make the most of the vast array of free PDF resources available and embark on a journey of continuous learning and intellectual growth.

FAQs About Representing Time In Natural Language Books

1. Where can I buy Representing Time In Natural Language books? Bookstores: Physical bookstores like Barnes & Noble, Waterstones, and independent local stores. Online Retailers: Amazon, Book Depository, and various online bookstores offer a wide range of books in physical and digital formats.
2. What are the different book formats available? Hardcover: Sturdy and durable, usually more expensive. Paperback:

- Cheaper, lighter, and more portable than hardcovers. E-books: Digital books available for e-readers like Kindle or software like Apple Books, Kindle, and Google Play Books.
3. How do I choose a Representing Time In Natural Language book to read? Genres: Consider the genre you enjoy (fiction, non-fiction, mystery, sci-fi, etc.). Recommendations: Ask friends, join book clubs, or explore online reviews and recommendations. Author: If you like a particular author, you might enjoy more of their work.
 4. How do I take care of Representing Time In Natural Language books? Storage: Keep them away from direct sunlight and in a dry environment. Handling: Avoid folding pages, use bookmarks, and handle them with clean hands. Cleaning: Gently dust the covers and pages occasionally.
 5. Can I borrow books without buying them? Public Libraries: Local libraries offer a wide range of books for borrowing. Book Swaps: Community book exchanges or online platforms where people exchange books.
 6. How can I track my reading progress or manage my book collection? Book Tracking Apps: Goodreads, LibraryThing, and Book Catalogue are popular apps for tracking your reading progress and managing book collections. Spreadsheets: You can create your own spreadsheet to track books read, ratings, and other details.
 7. What are Representing Time In Natural Language audiobooks, and where can I find them? Audiobooks: Audio recordings of books, perfect for listening while commuting or multitasking. Platforms: Audible, LibriVox, and Google Play Books offer a wide selection of audiobooks.
 8. How do I support authors or the book industry? Buy Books: Purchase books from authors or independent bookstores. Reviews: Leave reviews on platforms like Goodreads or Amazon. Promotion: Share your favorite books on social media or recommend them to friends.
 9. Are there book clubs or reading communities I can join? Local Clubs: Check for local book clubs in libraries or community centers. Online Communities: Platforms like Goodreads have virtual book clubs and discussion groups.
 10. Can I read Representing Time In Natural Language books for free? Public Domain Books: Many classic books are available for free as they're in the public domain. Free E-books: Some websites offer free e-books legally, like Project Gutenberg or Open Library.
