Gorman, 1970 **Anolis Lizards of the Caribbean** Joan Roughgarden, 1995-05-18 The Anolis lizards of the Caribbean are ideally suited for the study of evolutionary ecology Offering fascinating insights into the more than 150 species dispersed throughout the Caribbean islands Jonathan Roughgarden details the differences between species in a wide range of behavioral and physical characteristics including foraging behaviors body size and habitat use resulting from evolutionary divergences concurrent with the plate tectonic origins of the region This book will be of interest to students and researchers ecology and theoretical tropical and population biology **Anolis Lizards of the Caribbean** Jonathan Roughgarden, 1995-05-18 The Anolis lizards of the Caribbean are ideally suited for the study of evolutionary ecology Offering fascinating insights into the more than 150 species dispersed throughout the Caribbean islands Jonathan Roughgarden details the differences between species in a wide range of behavioral and physical characteristics including foraging behaviors body size and habitat use resulting from evolutionary divergences concurrent with the plate tectonic origins of the region This book will be of interest to students and researchers ecology and theoretical tropical and population biology Caribbean Amphibians and Reptiles Brian I. Crother, 1999-06-02 Amphibians and reptiles are the most numerous diverse and frequently encountered animals on the Caribbean islands This book provides a variety of perspectives on this amazing group of organisms Caribbean Amphibians and Reptiles compiled by an international team of zoologists takes a fresh and detailed look at the complex biological puzzle of the Caribbean The first true overview of the islands it includes a historical examination of the people who have studied the Caribbean amphibians and reptiles The book reviews the ecology evolutionary history and biogeographic explanations for the origins and diversity of the region s fauna with island by island coverage It puts the Caribbean in perspective by comparing the islands to Central America and its amphibian reptile diversity Additionally the book includes figures tables and color plates which bring to life some of the region s most spectacular creatures Key Features Presents the first complete review of amphibians and reptiles in the Caribbean Includes color plates and island maps Contributors are recognized authorities in the field Reproductive Biology and Phylogeny of Snakes Robert D. Aldridge, David M. Sever, 2016-04-19 Offering coverage of a wide range of topics on snake reproduction and phylogeny this comprehensive book discusses everything from primordial germ migration in developing embryos to semelparity death after reproduction in the asp viper Beginning with a review of the history of snake reproductive studies it presents new findings on development **Hormones and Reproduction in Fishes, Amphibians, and Reptiles** David O. Norris, Richard E. Jones, 2012-12-06 Comparative endocrinology is one of the most rapidly developing subdisciplines within the field of endocrinology and it is having a significant impact on research at the molecular cellular organismal and environmental levels Much of the current ferment in endocrinology is in reproductive endocrinology The purpose of this

volume on hormones and reproduction in fishes amphibians and reptiles is to summarize our present understandings and to identify important research problems to be addressed in the area of comparative reproductive endocrinology It was inspired by the gathering at Copper Mountain Colorado of eminent endocrine scientists from around the world on the occasion of the Tenth International Symposium on Comparative Endocrinology in July 1985 While preparing for that meeting we decided that a special volume on reproductive endocrinology was needed to summarize what is known and to stimulate research in particular directions Why do we emphasize fishes amphibians and reptiles First knowledge about the reproductive endocrinology of these ectothermic vertebrates can provide a clearer picture of the evolution of reproductive hormones and their effects on target organs This comparative approach can lead to new theories about the evolution of reproductive control mechanisms Second studies concerning the reproductive endocrinology of lower vertebrates can result in development of model systems for application to studies of birds and mammals Indeed information about the patterns of reproductive control in ectothermic vertebrates can tell us which are evolutionarily stable and which are labile

Hormones and Reproduction of Vertebrates, Volume 3 David O. Norris, Kristin H. Lopez, 2024-08-05 *Hormones and Reproduction of Vertebrates Volume 3 Reptiles* is the third of five second edition volumes representing a comprehensive and integrated overview of hormones and reproduction in fishes amphibians reptiles birds and mammals The book includes coverage of endocrinology neuroendocrinology physiology behavior and anatomy of reptilian reproduction It provides a broad treatment of the roles of pituitary thyroid adrenal and gonadal hormones in all aspects of reproduction as well as descriptions of major life history events New to this edition is a concluding assessment of the effect of environmental influences on reptiles Initial chapters in this book broadly examine sex determination reproductive neuroendocrinology stress and hormonal regulation as it relates to testicular and ovarian function Subsequent chapters examine hormones and reproduction of specific taxa including turtles crocodilians lizards and snakes The book concludes with an examination of endocrine disruption of reproduction in reptiles

Hormones and Reproduction of Vertebrates Volume 3 Reptiles is designed to provide a readable coordinated description of reproductive basics in reptiles as well as an introduction to the latest trends in reproductive research and a presentation of our understanding of reproductive events gained over the past decade It may serve as a stand alone reference for researchers and practitioners in the field of herpetology or as one of five coordinated references aligned to provide topical treatment across vertebrate taxa for researchers practitioners and students focused on vertebrate endocrinology Covers endocrinology neuroendocrinology physiology behavior and anatomy of reptile reproduction Includes pituitary thyroid adrenal and gonadal hormones Focuses on turtles crocodilians lizards and snakes Provides new coverage on environmental influences on reptiles

Marshall's Physiology of Reproduction: Reproductive cycles of vertebrates Francis Hugh Adam

Marshall,1984 **Hormones and Reproduction of Vertebrates, Volume 3** David O. Norris,Kristin H. Lopez,2011-05-04

This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals It is designed to provide a readable coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and our understanding of reproductive events Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group respectively the volumes are prepared so as to provide a thorough topical treatment across the vertebrates Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature and a comprehensive glossary of these terms and their alternative names is provided A complete essential and up to date reference for research scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research Covers the endocrinology neuroendocrinology physiology behaviour and anatomy of vertebrate reproduction Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects similarities and differences between them

Environmental Endocrinology I. Assenmacher,D.S. Farner,2013-03-07 From 11 to 15 July 1977 about 60 physiologists endocrinologists ecologists and other biologists from 14 countries convened at the University Montpellier for a symposium on Environmental Endocrinology This meeting was organized as a Satellite Symposium of the 27th International Congress of Physiological Sciences Paris 18-23 July 1977 This volume is a record of the communications presented at the symposium The objectives of the program were to examine the role of the endocrine system in a wide spectrum of adjustments and adaptations to changes in environmental conditions by various species of animals including man and to promote an exchange of ideas among investigators who have approached these functions from diverse aspects The diversity of the information and ideas communicated is great Of necessity they represent only an extremely modest selection of the many facets of endocrine function in the interaction of animals with their environments Beyond the usefulness of the communications individually we hope that they collectively demonstrate the substantial heuristic value of the concept of environmental endocrinology as it was perceived by the participants We acknowledge gratefully the kindness and sympathy of Professor Jacques ROUZAUD President of the University of Montpellier II for his generous extension of the hospitality of the University to the Symposium We are most grateful to Mrs Monique VIEU who effected so well the secretarial organization of the Symposium *Wildlife Abstracts* ,1976 **Biogeography and Ecology of New Guinea** J.L. Gressitt,2012-12-06 J L

Gressitt New Guinea is a fantastic island unique and fascinating It is an area of incredible variety of geomorphology biota peoples languages history traditions and cultures Diversity is its prime characteristic whatever the subject of interest To a

biogeographer it is tantalizing as well as confusing or frustrating when trying to determine the history of its biota To an ecologist and to all biologists it is a happy hunting ground of endless surprises and unanswered questions To a conservationist it is like a dream come true a flash back of a few centuries as well as a challenge for the future New Guinea is so special that it is hard to compare it with other islands or tropical areas It is something apart with its very complicated history chapters I 2 4 II 1 4 III I VI I 2 It is partly old but to a great extent very young yet extremely rich and complex It has biota of different sources to such a degree that it is still disputed in this volume as to what Realm it belongs to the Paleotropical or Notogaeian Australian or what Region Oriental Oceanic Papuan or Australian The terms Papuanian Indo Australian and Australasian also have been applied to the area

Natural History of West Indian Reptiles and

Amphibians Robert W. Henderson, Robert Powell, 2009 The reference source that biologists interested in West Indian herpetofauna have been waiting for Steven Reichling curator Memphis Zoo A state of the art compendium The West Indies is one of the hottest of the world's biodiversity hot spots and will continue to be a focus of ecological research now invigorated by this definitive synthesis S Blair Hedges Pennsylvania State University The West Indies have become a major focus for biologists and conservationists Its herpetofauna is considered one of the richest and most vulnerable in the world These fragile natural environments are home to many unique animals that occur only on these islands Loss of habitat development of scenic areas for a burgeoning tourist industry and the introduction of invasive species have contributed to an already tenuous situation for many of the region's native species This volume summarizes the natural history of each of the more than seven hundred species of frogs and reptiles that live in the West Indies Sure to be the starting point for all future research on West Indian amphibians and reptiles it will be an essential companion to the biologist contemplating or conducting research in the area

Organizational Constraints on the Dynamics of Evolution John Maynard Smith, G.
