Reptilian Incubation:

Nests, Eggs, and Incubation Denis Charles Deeming, Silas James Reynolds, 2015 *Nests Eggs and Incubation* brings together a global team of leading authorities to provide a comprehensive overview of the fascinating and diverse field of avian reproduction Starting with a new assessment of the evolution of avian reproductive biology in light of recent research the book goes on to cover four broad areas the nest the egg incubation and the study of avian reproduction New research on nest structures egg traits and life history is incorporated whilst contemporary methodologies such as self contained temperature probes and citizen science are also discussed Applied chapters describe how biological knowledge can be applied to challenges such as urbanisation and climate change The book concludes by suggesting priorities for future research This book builds upon the foundations laid down by Charles Deeming's 2002 work *Avian Incubation* available for readers of this book to access online for free much of which remains relevant today Read in conjunction with this previous volume it provides an up to date and thorough review of egg biology nest function and incubation behaviour which will be an essential resource for students of avian biology as well as both professional and amateur ornithologists working in the field of avian reproduction

Ecophysiological Analysis of Vulnerability to Climate Warming in Ectotherms Lin Zhang, Buddhi Dayananda, Bao-jun Sun, Jigang Xia, 2023-07-25 Temperature plays a critical role in animal survival and climate warming is one of the greatest threats to global biodiversity in the future It is already affecting species and communities with severe impacts and it is predicted that climate warming will cause species extinctions and distributional shifts in the coming decades The impact of climate warming is expected to be particularly severe on ectothermic animals including fishes amphibians and reptiles Thus assessing species responses to ongoing climate warming and determining what conservation actions should be taken are among the most significant and controversial challenges for ecologists Identifying the most vulnerable species to extinction as a result of climate warming is an appropriate first step in mitigating the impacts of a changing world An organism's vulnerability to climate warming depends on its sensitivity to environmental changes its exposure to the change and its ability to recover from and potential to adapt to change The interaction of these factors makes predicting the effects of climate warming on species a complex and major challenge for ecologists Developing a deeper knowledge of ectotherms vulnerability to climate warming is crucial to enhance our understanding of extinction processes and significantly contribute to conservation efforts by guiding the implementation of better policies and management strategies to prevent the extinction of remaining populations Investigations of climate warming vulnerability are likely to benefit from measurements of environmental conditions taken at the scale at which organisms experience them Therefore the main objective of this interdisciplinary Research Topic is to bring together research on how ectotherms respond to climate warming at various levels We will particularly focus on the life history energy strategy physiological response etc We encourage inter and multidisciplinary research approaches linking molecular biology thermal physiology and ecology

behavioral ecology functional ecology evolutionary genetics and bioenergetics **Nesting in reptiles: natural and anthropogenic threats and evolutionary responses** J. Sean Doody, Jeanine M. Refsnider, 2023-01-06 Development of Cardiovascular Systems Warren W. Burggren, Bradley B. Keller, 1997 This volume is a unique overview of cardiovascular development from the cellular to the organ level across a broad range of species The first section focuses on the molecular cellular and integrative mechanisms that determine cardiovascular development The second section has eight chapters that summarize cardiovascular development in invertebrate and vertebrate systems The third section discusses the effects of disease and environmental and morphogenetic influences on nonmammalian and mammalian cardiovascular development It includes strategies for the management of congenital cardiovascular malformations in utero and postnatally **Poultry Care and Practice** Amaranaath Mehra, 2025-01-03 Poultry Care and Practice covers the comprehensive aspects of poultry farming including the anatomy of birds commercial management and the successful global poultry industry This book focuses on domestication processes of birds like ducks chickens geese and turkeys for eggs and meat production We delve into the taxonomy of different poultry birds examining growth models egg laying patterns and reproductive systems The book also highlights poultry breeding and genetic improvements providing a solid foundation for students to understand physical characteristics and management principles Popular poultry such as ducks geese and ostriches are discussed highlighting their cultural significance and usage Through practical examples we offer insights into poultry farming techniques and innovations making it an invaluable resource for students and professionals *Biology of Turtles* Jeanette Wyneken, Matthew H. Godfrey, Vincent Bels, 2007-12-26 Featuring in depth contributions from an international team of experts the *Biology of Turtles* provides the first comprehensive review of the Testudinata The book starts with the premise that the structure of turtles is particularly interesting and best understood within the context of their development novelty functional diversity and e **Reproductive Biology and Phylogeny of Lizards and Tuatara** Justin L. Rheubert, Dustin S. Siegel, Stanley E. Trauth, 2014-12-19 Reproductive Biology and Phylogeny of Lizards and Tuatara is a remarkable compendium of chapters written by the world's leading experts from over four continents The book begins with a chapter recounting historical discoveries in reproductive biology and a review of phylogenetics and up to date hypotheses concerning evolutionary relationships among The Evolution of Parental Care Nick J. Royle, Per T. Smiseth, Mathias Kölliker, 2012-08-09 Parental care includes a wide variety of traits that enhance offspring development and survival This novel book provides a fresh perspective on the current state of the study of the evolution of parental care written by some of the top researchers in the field and taking a broad taxonomic approach Guinness World Records 2011 Craig Glenday, 2011 The 2011 edition of the most famous book of world records including circus skills and sideshow arts celebrity exploits animal activities and a tour of the world of records in a city by city guide *Noninfectious Diseases and Pathology of Reptiles* Michael M. Garner, Elliott R. Jacobson, 2020-09-03 This book accompanies Infectious Diseases and Pathology of Reptiles Second Edition to cover

noninfectious diseases of reptiles meeting the need for a similar authoritative single source reference The volume features color photos of normal anatomy and histology as well as gross light and electron microscopic imagery of diseases Subjects range from neoplasia nutrition and metabolic disease and deposition disorders to developmental anomalies trauma and physical diseases and the unique contribution of paleopathology and diseases of bone Each chapter is supported by numerous figures many of which are unique and cannot be found in the published literature Readers will note that some of the chapters are based on organ system a trend that will continue into the next edition to encompass all of the basic organ systems This book holds the most information ever accrued into one publication on noninfectious diseases and pathology of this class of animals providing information on every aspect of the anatomy pathophysiology and differential diagnosis With up to the minute data a never before seen collection of images and a stellar panel of contributors Noninfectious Diseases and Pathology of Reptiles is the definitive resource for veterinarians biologists and researchers involved in the study of reptile diseases

Exploring Studbooks for Wildlife Management and Conservation F.P.G. Princée, 2016-12-20 Many endangered species of wild animals are managed in captivity through studbooks In this book these data rich resources are mined in innovative integrated and statistically tested ways to maximise information gain for conservation practice whether for captive or released reintroduced or managed wild populations This book is thus an important tool for all species managers and for students and researchers in small population biology and wildlife conservation The book's studbook analyses are grouped in three interrelated sections natural history demography and genetics Statistical tests to determine the significance of results or to compare results between subgroups are undertaken throughout Real studbooks of a variety of species e.g. cranes wolverines blesbok illustrate the practical applications and interpretations of the analyses and statistics The natural history section presents analyses to determine baseline species information such as litter size inter birth interval longevity and seasonality Demography covers census style analyses age class based life tables comparative survival analyses and population projections Solutions for dealing with small sample sizes are included Inbreeding depression and unconscious selection form the main focus of the genetics section Survival and life table analyses are used to assess inbreeding effects Quantitative genetics methods are applied to natural history traits as a tool to monitor genetic variation A fourth section on conservation shows how data from captive populations can be used where natural history data from wild populations are missing A real example uses studbook data to inform Population Viability Analysis The final section deals with issues related to incomplete and missing data and statistical topics The purpose written open source software programs Population Management Library PML and studbookR used for analyses in the book are available at www.princee.com

The Secret Social Lives of Reptiles J. Sean Doody, Vladimir Dinets, Gordon M. Burghardt, 2021-06 Revealing the secrets of reptilian social relationships through original quantitative research field studies laboratory experiments and careful analysis of the literature The Secret Social Lives of Reptiles elevates these fascinating animals to key players in the science of behavioral ecology

TEXTBOOK OF ANIMAL BEHAVIOUR, THIRD EDITION MANDAL, FATIK BARAN,2015-09-18 This well accepted book now in its Third Edition is an extension of the previous edition The text has further enriched with more information to understand animal behaviour coherently and scientifically The book attempts to provide a reasonably suitable account of animal behaviour for undergraduate as well as postgraduate students Although behaviour of animals has fascinated people for a long behavioural biology has been incorporated in the syllabi very recently The study of behaviour received its important boost from the work of Charles Darwin who used the term instinct to refer to the natural behaviour of animals In the 1930s a comprehensive theory of animal behaviour emerged through the work of Konrad Lorenz and later of Niko Tinbergen Biological study of behaviour in fact came of age as a science when Lorenz Tinbergen and Karl von Frisch received the Nobel Prize for their contribution to science Observing and describing exactly what animals do is fascinating and scientific analysis of their behaviour is significant for several reasons Each species tends to have an array of stereotyped behaviours some of which are shared with related species but others are unique Ecology natural selection macroevolution microevolution and gene constitute the foundation of animal behaviour Various animal groups exhibit diverse strategies for their survival and reproduction which are discussed in this book The book is primarily intended for the students of B Sc M Sc Zoology Life Science for their courses It would be useful for the researchers in the field of animal behaviour and conservation biologists It would also attract students who are pursuing courses in Sociology and Anthropology Key features Presents a well balanced view of ethology Discusses the current development in the field Includes a glossary of important terms Offers chapter end questions to check the students understanding of the concept

Cognitive Ecology II Reuven Dukas,John M. Ratcliffe,2009-11-15 Merging evolutionary ecology and cognitive science cognitive ecology investigates how animal interactions with natural habitats shape cognitive systems and how constraints on nervous systems limit or bias animal behavior Research in cognitive ecology has expanded rapidly in the past decade and this second volume builds on the foundations laid out in the first published in 1998 Cognitive Ecology II integrates numerous scientific disciplines to analyze the ecology and evolution of animal cognition The contributors cover the mechanisms ecology and evolution of learning and memory including detailed analyses of bee neurobiology bird song and spatial learning They also explore decision making with mechanistic analyses of reproductive behavior in voles escape hatching by frog embryos and predation in the auditory domain of bats and eared insects Finally they consider social cognition focusing on alarm calls and the factors determining social learning strategies of corvids fish and mammals With cognitive ecology ascending to its rightful place in behavioral and evolutionary research this volume captures the promise that has been realized in the past decade and looks forward to new research prospects

Reproductive Biology and Phylogeny of Snakes Robert D. Aldridge,David M. Sever,2016-04-19 Offering coverage of a wide range of topics on snake reproduction and phylogeny this comprehensive book discusses everything from primordial germ migration in developing embryos to semelparity death after reproduction in the

aspic viper Beginning with a review of the history of snake reproductive studies it presents new findings on development

South American Sauropodomorph Dinosaurs Alejandro Otero, José L. Carballido, Diego Pol, 2022-04-25 Sauropodomorpha Huene 1932 is one of the most successful groups of dinosaurs including the most abundant and diverse herbivorous forms with a worldwide record extending from the late Triassic to the late Cretaceous Sauropodomorphs comprise a diverse assemblage of early forms traditionally called prosauropods and the well established clade Sauropoda Marsh 1878 Early sauropodomorphs were small to medium sized forms with long necks and reduced skulls mostly bipeds and omnivores and were abundant in continental environments in the Late Triassic and Early Jurassic With more than 150 valid species and a worldwide distribution Sauropoda includes the dominant herbivorous dinosaurs from the Middle Jurassic to the Late Cretaceous Its unique body plan characterized by gigantic size graviportal locomotion long necks and tails and reduced skulls made this group an undisputed icon in popular culture since the 19th century In South America the sauropodomorph record is particularly rich and abundant and many species have shed light to understand important milestones in the evolutionary history of this group of dinosaurs The origin of Sauropodomorpha the transition to Sauropoda and the diversification of its most successful evolutionary lineages are largely exemplified by the South American fossil record In this contribution we synthesize the diversity of sauropodomorphs from South America including data on their geographic and stratigraphic provenance phylogenetics paleobiology taphonomy and behaviour underscoring their significance within the context of sauropodomorph evolution

Genomic and Epigenomic Biomarkers of Toxicology and Disease Saura C. Sahu, 2022-04-21 Genomic and Epigenomic Biomarkers of Toxicology and Disease The latest developments in biomarker research applicable to toxicology and medicine Research on genomic and epigenomic biomarkers is developing rapidly with cutting edge studies scattered throughout the academic literature making the status of ongoing scientific activity in this area difficult to ascertain Genomic and Epigenomic Biomarkers of Toxicology and Disease Clinical and Therapeutic Actions delivers a comprehensive and authoritative compilation of up to date developments in the application of genomic and epigenomic biomarkers to toxicology disease prevention cancer detection therapeutics gene therapy and other areas With contributions from a collection of internationally recognized investigators this edited volume offers unique insights into current trends and future directions of research in the discussed areas Combining state of the art information on genomic and epigenomic biomarkers from a range of specialists from around the world this monograph includes A thorough introduction to microRNAs as non invasive biomarkers of toxicity and chemical hazard Comprehensive explorations of extracellular vesicle associated miRNAs as toxic biomarkers as well as transcriptomic applications in toxicology and medicine Practical discussions of circulating miRNAs as biomarkers of metal exposure as well as microRNAs biomarkers of malignant mesothelioma In depth examinations of the role of noncoding RNAs in innate immune responses perturbed by environmental arsenic with a focus on microRNAs Perfect for researchers toxicologists risk assessors and regulators Genomic and

Epigenomic Biomarkers of Toxicology and Disease Clinical and Therapeutic Actions will also earn a place in the libraries of graduate students with an interest in biomarkers toxicology agriculture or the environment The Most Perfect Thing Tim Birkhead, 2016-04-12 A bird's egg is a nearly perfect survival capsule an external womb and one of natural selection's most wonderful creations Shortlisted for the Royal Society Insight Investment Science Book Prize 2016 One of Forbes Best Books About Birds and Birding in 2016 Renowned ornithologist Tim Birkhead opens this gripping story as a female guillemot chick hatches already carrying her full quota of tiny eggs within her undeveloped ovary As she grows into adulthood only a few of her eggs mature are released into the oviduct and are fertilized by sperm stored from copulation that took place days or weeks earlier Within a matter of hours the fragile yolk is surrounded by albumen and the whole is gradually encased within a turquoise jewel of a shell Soon the fully formed egg is expelled onto a rocky ledge where it will be incubated for four weeks before a chick emerges and the life cycle begins again THE MOST PERFECT THING is about how eggs in general are made fertilized developed and hatched Birkhead uses birds eggs as wondrous portals into natural history enlivened by the stories of naturalists and scientists including Birkhead and his students whose discoveries have advanced current scientific knowledge of reproduction **Comparative Studies of Energy Homeostasis in Vertebrates** Maximilian Michel, 2018-08-03 A brief glimpse into new insight driving the comparative biology of energy homeostasis in vertebrates with a focus on non mammalian vertebrates What are the key conserved mechanisms and what aspects of feeding behavior and energy allocation are different between species Hormones and Reproduction of Vertebrates, Volume 3 David O. Norris, Kristin H. Lopez, 2011-05-04 This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals It is designed to provide a readable coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and our understanding of reproductive events Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group respectively the volumes are prepared so as to provide a thorough topical treatment across the vertebrates Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature and a comprehensive glossary of these terms and their alternative names is provided A complete essential and up to date reference for research scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research Covers the endocrinology neuroendocrinology physiology behaviour and anatomy of vertebrate reproduction Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects similarities and differences between them
