

## Book Reviews

**"Research Animals and Concepts of Applicability to Clinical Medicine.** Papers from a symposium, Hannover, 1981. Klaus Gärtner, Hansjoachim Hackbarth, and Hilmar Stolte (eds). Basel: Karger, 1982. 232 pp.

This volume is based primarily on a symposium of the same title held in Hannover in 1981. The aim of that symposium was the discussion of certain opinions pertaining to the problems of animal welfare. Foremost among the opinions discussed was the argument "that scientific results obtained from experiments with laboratory animals can not be extrapolated to man, as the structure and functions of the body differ randomly among the different species." That such a baseless argument be presented in seriousness in the 1980's should provide some commentary on the cogency of modern science. That such an argument be deemed worthy of the merit of a response on the part of the scientific community provides a penetrating insight on the defensive nature of modern biology. Irrespective of these comments the argument was discussed and it was concluded, unamazingly, "that the structures and functions of the body do not differ randomly among the different mammal species." Although the basis of the rebuttal of the argument is empirically obvious to us all, this volume does serve the purpose of bringing together extensive quantitative documentation for the rebuttal.

Scattered among the articles of the volume are 27 "short articles" or abstracts with zero to three references. Short presentations or abstracts do have a place at symposia but when they are incorporated into a volume such as this one they tend to dilute it. Although some of these abstracts present interesting information, their lack of citation of the pertinent literature makes them anecdotal. Furthermore, because of their brief nature they are not useful in promoting the aims of the book. Another shortcoming of this book, which tends to limit its usefulness, is its lack of an index.

On the positive side this volume contains several well developed and useful articles related to the aim of the book. Most of these are in the first section on "Concepts of Comparability," but additional articles in other sections of the book include those on the major histocompatibility systems in different species and on the necessity of animal research in nephrology. Several genetic disorders of animals with similarities to human genetic disease are described. However, lacking is an article on the similarities of chromosome structure among related species.

Received for publication February 25, 1983.

Lambrecht,William C. Eckelman,2012-12-06 The editors have asked me to write this foreword probably for two reasons First I have spent 35 years trying to develop radiolabeled compounds that would help diagnose and treat disease I and the people from my laboratory have been much involved with developing Nan I for the diagnosis and treatment of hyperthyroidism and well differentiated thyroid cancer Second I was a participant throughout the entire symposium upon which this book is based Our latest 311 labeled compound I31I metaiodobenzylguanidine took us 13 years to develop It has succeeded in diagnosing and treating adrenergic tumors 31 under circumstances where Na 1 would have failed for the diagnosis and treatment of thyroid cancer I therefore hope that more scientists will be attracted to this field This book is written by intelligent experienced investigators who are knowledgeable It is a must for anyone new in the field For the experienced I would like to remind you that I attended the entire symposium the breadth and timeliness of the update has helped us to redirect some of our current efforts into more scientifically productive channels William H Beierwaltes M D      **National Library of**
