Project Management for Research A.B. Badiru, 2012-12-06 Graduate research is a complicated process which many engineering and science students aspire to undertake The complexity of the process can lead to failures for even the most brilliant students Success with graduate level research requires not only a high level of intellectual ability but also a high level of program management skills After many years of supervising several graduate students I have found that most of them have the same basic problems of planning and implementing their research programs Even the advanced graduate students need the same mentoring and management guidance that has little to do with actual classroom performance It is my conjecture that graduate students could make a better job of their research programs if a self paced guide were available to them The guide provided in this book covers topics ranging from how to select an appropriate research problem to how to schedule and execute research tasks The book takes a project management approach to planning and implementing graduate research in engineering science and manufacturing disciplines It is a self paced guide that will help graduate students and advisors answer most of the basic questions about how to do this and how to do that There is a need for such a guide book The book will alleviate frustration on the part of the student and the research advisor

Writing and Thinking in Contemporary Academia Martin Grünfeld, 2019-06-19 Across disciplinary borders clarity is taken for granted as a cardinal virtue of communication in contemporary academia But what is clarity how is it practised in writing across disciplinary borders and how does it affect our ways of researching and thinking This book explores such questions by scrutinising the ideal of clarity beyond its apparently self evident value Through a multi

methodological empirical analysis of the ideal of clarity the author offers a sketch of what is termed the poetics of clarity which is unfolded as a field of tension with important implications for sentence formation authorial positioning and textual organisation By way of a series of reflections on the possible consequences of this for thinking this volume also explores the parts of knowledge production that may be marginalised especially poetic language use biases interests and contexts multi dimensional arguments and errors Revealing a positivist bias and a regime of high speed consumption that characterise what in certain regards might be considered a productive space for knowledge production Writing and Thinking in Contemporary Academia will appeal to scholars with interests in the sociology of knowledge continental philosophy the philosophy of science and academic writing **Research Paper NC.** ,1981 Cracking the Common Core William E.
