Male infertility accounts for 30% of infertility cases and its prevalence in the general population approximately ranges between 9 and 15%, according to the available surveys [1]. Male infertility is emerging as an important cause of infertility worldwide; the growing scientific interest in this field of reproductive medicine is demonstrated by the increasing number of scientific papers published by journals dedicated to andrology, urology, and reproductive medicine. Since 2020, the *Journal of Clinical Medicine* has dedicated a novel section to Reproductive Medicine and Andrology, with 136 articles being published to date. This editorial aims to highlight the most prominent contributions to the field of male infertility provided by this section of the journal.

Recent research has improved our understanding of the sperm contribution to fertilization and embryo development, which goes well beyond the simple provision of the paternal haploid genome to the oocyte. Chiocciarelli and coworkers provided an in-dept review of the contribution of histone post-translational modifications (PTMs) to key spermatogenic events, such as the self-renewal and commitment of spermatogonia, meiotic recombination, chromatin remodeling, as well as of their role in sperm function and embryo development. Since many histone PTMs remain associated with the paternal genome during de novo chromatin formation occurring after fertilization, the authors provide some intriguing hypotheses to explain how sperm histones may play a key role for a proper embryonic reprogramming and transgenerational epigenetic inheritance. The authors also reviewed the available evidence on the impact of circular RNAs (circRNAs) on sperm quality and embryo development [2].

Azoospermia due to spermatogenic dysfunction, also termed non-obstructive azoospermia (NOA), is the most severe form of male infertility, affecting about 1% of the male population and 10–15% of the infertile men. A Special Issue in this journal ([mdpi.com/journal/jcm/special_issues/NOA_Management](https://www.mdpi.com/journal/jcm/special_issues/NOA_Management)) was dedicated to this argument. As more extensively detailed in the accompanying editorial [3], the Special Issue was built on the contributions of opinion leaders such as Peter N. Schlegel and his group, who illustrated how to manage patients with NOA and optimize the success of mTESE [4], as well as the reproductive chances of men with NOA according to the underlying etiologies [5]; Sandro Esteves and coworkers, who provided a detailed explanation on how to discriminate the two forms of azoospermia, obstructive vs. non-obstructive [6]; Krausz and Cioppi, who reviewed the most common genetic abnormalities in men with NOA and their possible impact on their general and reproductive health, as well as on their offspring health [7]; Goulis and colleagues, who showed how the eventual post-surgical hypogonadism may depend upon some clinical factors, including etiology of NOA, the number of previous surgical attempts, and testicular volume [8]; Aydos, who provided an in-depth review of the available procedures to select testicular sperm for ICSI [9]; Smith, who explored the possible application of microfluidic technology to isolation of sperm from testicular samples [10]; and our group, who proposed a detailed description of the microTESE surgical technique [11], reviewed

Research Papers In Fertiltity And Reproductive Medicine:

Clinical Infertility and in Vitro Fertilization Botros RMB Rizk,Hassan N Sallam,2012 **The Challenge of Reproductive Medicine at Catholic Universities** Ivo Brosens,I. A. Brosens,2006 New technologies developing at an unbelievable pace have profoundly changed many areas of reproductive medicine including fertility control infertility treatment embryology prenatal diagnosis and fetal surgery These fields of modern reproductive medicine are all flourishing at Catholic universities in the Low Countries Belgium and Holland However contraceptive techniques assisted reproductive technologies preimplantation genetic diagnosis and embryonic stem cell research are deeply dividing Catholic universities around the world Are Catholic universities in the Low Countries heading silently towards a schism with Rome Or is modern reproductive medicine based on personalist ethics and practiced at progressive Catholic universities compatible with the Catholic doctrine **Studies on Men's Health and Fertility** Ashok Agarwal,Robert John Aitken,Juan G Alvarez,2012-03-17 Studies on Men s Health and Fertility provides a comprehensive series of up to the minute reviews addressing the role of oxidative stress in the aetiology of reproductive pathologies in the male This volume represents by far the most detailed authoritative review of the field that has been produced to date The text encompasses the basic science of reactive oxygen species ROS production by mammalian spermatozoa the way in which these highly reactive molecules are processed by the germ line and the physiological significance of this redox activity in the generation of a functional gamete The factors responsible for perturbing the delicate balance between physiological redox signaling on the one hand and oxidative stress on the other are also extensively reviewed and some of the first clues concerning the underlying mechanisms age heat infection cryostorage aberrant lipid metabolism clearly identified From a clinical perspective there are chapters setting out the methods we should be using to diagnose oxidative stress in the male germ line a clinical perspective on the aetiology of this condition and detailed considerations of the most suitable means of ameliorating such stress from a therapeutic point of view Studies on Men s Health and Fertility is intended to provide clinicians and scientists with a snap shot of the current status of this exciting rapidly moving field The book will be of value to clinicians interested in strategies for the management of oxidative stress in their infertility patients and scientists wishing to understand the molecular mechanisms underpinning the generation of ROS by these cells and its pathophysiological significance It was not so long ago that the ability of spermatozoa to generate ROS was a hotly disputed topic With the publication of this book such doubts can finally be laid to rest There is now no doubt that these cells actively generate ROS that oxidative stress is a major contributor to defects in male reproductive health and that the successful clinical management of this condition depends on developing a deeper understanding of the underlying molecular mechanisms In this quest Studies on Men s Health and Fertility will be seen as a clear and important milestone **Current Studies in Obstetrics and Gynaecology I** Fulya ÇAĞLI,Mehmet AK,2024-12-22
