Models Methods for Project Selection systematically examines in this book treatment the latest work in the field of project selection modeling The models presented are drawn from mathematical programming decision theory and finance These models are examined in two categorical streams the management science stream and the financial model stream The book describes the assumptions and limitations of each model and provides appropriate solution methodologies Its organization follows three main themes Criteria for Choice Chapters 1 3 investigate the effect of the choice of optimization criteria on the results of the portfolio optimization problem Risk and Uncertainty Chapters 4 7 deal with uncertainty in the project selection problem Non Linearity and Interdependence These chapters deal with problems of non linearity and interdependence as they arise in the project selection problem Chapters 8 9 and 10 present solution methodologies which can be used to solve these most general project selection models      *Management of Research and Development Organizations* Ravinder Kumar Jain, Harry C. Triandis, 1997 This edition has been completely revised The authors noted authorities in the field focus on ways to improve R D organization productivity and foster excellence in such companies They describe how to design jobs organize hierarchies resolve conflicts motivate employees and create an innovative work environment Features extensive cross cultural coverage of European and Pacific Rim R D organizations and policies which greatly differ from the US Includes an entirely new section on various strategic planning elements unique to an R D organization along with a case study

**Project Selection Under Uncertainty** Stylianos Kavadias, Christoph H. Loch, 2012-12-06 Project Selection Under Uncertainty is the result of a five year research program on the selection of projects in New Product Development NPD Choosing the New Product Development portfolio is of critical importance in today s business environment The NPD portfolio has considerable strategic effect on the middle term success of a business This book takes a step in developing a theory that addresses the need for quantitative prioritization criteria within the broader strategic context of the R D portfolios Its foundation lies in mathematical theory of resource constrained optimization with the goal to maximize quantitative returns The book seeks to broaden the portfolio discussion in two ways First simplified models appropriate for the data poor NPD context are developed which attempt to illuminate the structure of the choice problem and robust qualitative rules of thumb rather than detailed algorithmic decision support Such robust rules can be applied in the R D environment of poor data availability Second the annual portfolio review is not the only important choice in resource allocation In addition the book discusses how ideas might be pre screened as they emerge and how projects should be prioritized once they are funded and ongoing      **Applied Research Project Selection in Mission-oriented Agencies** William M.
