**Generalized LR Parsing** Masaru Tomita,1991-08-31 The Generalized LR parsing algorithm some call it Tomita s algorithm was originally developed in 1985 as a part of my Ph D thesis at Carnegie Mellon University When I was a graduate student at CMU I tried to build a couple of natural language systems based on existing parsing methods Their parsing speed however always bothered me I sometimes wondered whether it was ever possible to build a natural language parser that could parse reasonably long sentences in a reasonable time without help from large mainframe machines At the same time I was always amazed by the speed of programming language compilers because they can parse very long sentences i e programs very quickly even on workstations There are two reasons First programming languages are considerably simpler than natural languages And secondly they have very efficient parsing methods most notably LR The LR parsing algorithm first precompiles a grammar into an LR parsing table and at the actual parsing time it performs shift reduce parsing guided deterministically by the parsing table So the key to the LR efficiency is the grammar precompilation something that had

never been tried for natural languages in 1985 Of course there was a good reason why LR had never been applied for natural languages it was simply impossible If your context free grammar is sufficiently more complex than programming languages its LR parsing table will have multiple actions and deterministic parsing will be no longer possible     **Power to Spell** Paul Robert Hanna,1969     **Catalog of Copyright Entries, Third Series** Library of Congress.
