## **Seeds Of Conflict:**

*Seeds of Resistance* Mark Schapiro, 2018-09-18 Sun Soil Water Seed These are the primordial ingredients for the most essential activity of all on earth growing food All of these elements are being changed dramatically under the pressures of corporate consolidation of the food chain which has been accelerating just as climate change is profoundly altering the conditions for growing food In the midst of this global crisis the fate of our food has slipped into a handful of the world's largest companies Food Chained will bring home what this corporate stranglehold is doing to our daily diet from the explosion of genetically modified foods to the rapid disappearance of plant varieties to the elimination of independent farmers who have long been the bedrock of our food supply Food Chained will touch many nerves for readers including concerns about climate change chronic drought in essential farm states like California the persistence of the junk food culture the proliferation of GMOs and the alarming domination of the seed market and our very life cycle by global giants like Monsanto But not all is bleak when it comes to the future of our food supply Food Chained will also present hopeful stories about farmers consumer groups and government agencies around the world that are resisting the tightening corporate squeeze on our food chain

Genetic Seeds of Warfare R. Paul Shaw, Yuwa Wong, 2020-12-22 For millennia humanity has simultaneously deplored and waged war With each conflict the stakes have risen and we now face global annihilation for the sake of a practice all the world claims to condemn Is there some seemingly irresistible force that impels us toward our own destruction To explain this central paradox of human behaviour Genetic Seeds of Warfare originally published in 1989 advances a startling new theory It traces the origins of warfare back to early groups of Homo sapiens in competition for scarce resources showing that warfare evolved as these groups evolved kin group against kin group tribe against tribe nation against nation Rather than being tied to a specific gene warfare emerged as one of many behavioural strategies for maximising genetic survival As social groups became more complex motivations for warfare developed from simple protection of blood relations to political appeals to shared ethnicity religion and national identity But the ultimate cause of warfare is rooted in the most basic of human drives the need to ensure that one's genes will survive and reproduce The authors challenge many assumptions about human behaviour in general and warfare in particular They convincingly present the case for an evolutionary understanding of the propensity for warfare supporting their argument with data from a vast array of social and natural science research In doing so they reveal why previous attempts at ending war have failed and make proactive suggestions toward the development of a new agenda for world peace
