Wardian Case Luke Keogh, 2023-01-05 In 1829 surgeon and amateur naturalist Nathaniel Bagshaw Ward discovered that plants enclosed in airtight glass cases could survive for long periods without watering After four years of growing plants under glass in his London home Ward created traveling glazed cases that he hoped would be able to transport plants around the world After a test run from London to Sydney Ward was proven correct and the Wardian case was born It is easy to forget in our technologically advanced and globalized world but prior to the invention of the case it was extremely difficult to transfer plants around the globe as they often died from mishandling cold weather or salt from the ocean In this enthralling book Luke Keogh takes us around the world and through history with the Wardian case He shows that this revolution in the movement of plants transformed the world impacting the commercial nursery trade late nineteenth century imperialism and the global environment The repercussions of this revolution are still with us today The Lost Orchid Sarah

Bilston, 2025-05-06 Sarah Bilston unfolds the story of orchid mania the nineteenth century craze among European and North American collectors vying to own the world s most coveted flowers Focusing the hunt for the so called lost orchid an especially vaunted flower native to Brazil Bilston reveals the enormous human and environmental cost of a colonial obsession

Visions of Loveliness Judith M. Taylor, 2014-12-01 Gardeners of today take for granted the many varieties of geraniums narcissi marigolds roses and other beloved flowers for their gardens Few give any thought at all to how this incredible abundance came to be or to the people who spent a good part of their lives creating it These breeders once had prosperous businesses and were important figures in their communities but are only memories now They also could be cranky and quirky In the eighteenth and nineteenth centuries new and exotic species were arriving in Europe and the United States from all over the world and these plants often captured the imaginations of the unlikeliest of men from aristocratic collectors to gruff

gardeners who hardly thought of themselves as artists But whatever their backgrounds they all shared a quality of mind that led them to ask What if and to use their imagination and skills to answer that question themselves The newest rose from China was small and light pink but what if it were larger and came in more colors Lilac was very nice in its way but what if its blossoms were double and frilly While there are many books about plant collectors and explorers there are none about plant breeders Drawing from libraries archives and the recollections of family members horticultural historian Judith M Taylor traces the lives of prominent cultivators in the context of the scientific discoveries and changing tastes of their times Visions of Loveliness is international in scope profiling plant breeders from many countries for example China and the former East Germany whose work may be unknown to the Anglophone reader In addition to chronicling the lives of breeders the author also includes chapters on the history behind the plants by genus from shrubs and flowering trees to herbaceous plants

Claiming Indigenous Plant Knowledge Carey McCormack, 2024-11-30 *Claiming Indigenous Plant Knowledge* From Botanical Exchanges to Resource Extraction in the Indian Ocean World examines the collection and documentation of the natural world's development over the course of the nineteenth century into a vast network of scientists who attempted to categorize and understand nature particularly in the botanically rich Indian Ocean But the process of collecting plants and exchanging knowledge about the natural world went far beyond the labor of botanists and naturalists Naturalists depended on many groups for regional knowledge and local information about the uses names and value of plants Publications and archival materials included local and indigenous knowledge of nature but as exploration led to colonial expansion and botany became a professional science local and indigenous knowledge moved to the periphery of botanical writing Local knowledge never stopped being important but the act of discovery and the claiming perhaps even colonization of botanical knowledge became the limited sphere of professional botanists Indigenous peoples involved in the early days of collecting never stopped their activities but professionals failed to acknowledge their labor and expertise By the end of the century colonial administrations used botanic information collected by professionals to convert colonies into natural resource extraction zones This shift disrupted indigenous lifeways in the Indian Ocean World and led to environmental issues facing the region today
